All mailed papers are sent direct to Friday evening trains. Any subscriber who receives his paper late will confer a favor by complaining to the Circulation Department, 62 Church Street, Toronto.

# The Year 1920—Retrospect and Prospect

**Turning Point in Price Movement Was Feature of Year—Bond Prices Reached Low Level, While Stocks Rose and Fell—Bank Loans Increase, While Deposits Fail to Respond—Insurance Business Continues to Grow**

**W**HEN the armistice was signed Canada stopped and considered. This was but a temporary break in the period of expansion which had commenced in 1916, and the year 1919 found business breaking all war-time records. A real turn in the tide of progress took place in the year just closed. Prices are unmistakably coming down, business is contracting, labor is more plentiful and more efficient, and speculation is on the decrease. The year 1920 marks a turning point in Canada's history.

It is remarkable how easily the transition, so far as it has gone, has been brought about. There have been many bears in the business world, and these have offset the influence of business leaders who expected a prolonged period of high prices and prosperity. Canada has been one of the first to feel the effects of the downward movement, because she is a great producer of the raw materials which have been among the first commodities to suffer price reductions.

Throughout the whole of the year individual buying has been maintained fairly well. Even the heavy luxury taxes imposed by the Dominion government last June have failed to materially affect the volume of business as a whole. In fact, it is probable that a movement towards lower prices, coupled with a maintenance of the present wage scales, will place wage earners in a position to buy more than at any time during the past few years.

Nevertheless the summer and autumn brought a rapid contraction in business. This had been anticipated and in part brought about by the banks earlier in their year, when they set about bringing the period of credit expansion to a close. As a guide to business policy this attitude on the part of the banks was more effective than the mere reduction in loans which was achieved; in fact, October was the first month in which current loans showed a reduction, although earlier reductions in call loans indicated that speculation was the first field to which the screws were applied.

### Primary Production

Primary production has again come to the assistance of this country. The war-time record of manufacturing industry was remarkable, but it at the same time is being more and

more felt that the future of this country rests in producing raw materials and carrying them to shipping points, working them in some cases through the earlier process of manufacture. Natural resources are yearly becoming scarcer, and continually enhanced prices are assured for products of this class.

The acreages sown to grain crops were less this year than last, but higher yields brought the production to a larger total. The number of acres sown to wheat was 17,186,300, compared with 19,295,968 in 1919; 15,555,400 acres were sown to oats, compared with 14,952,114 in 1919. Acreages sown to other grains were as follows: Barley, 2,588,000, a decrease of 2 per cent.; rye, 729,500, a decrease of 3 per cent.; peas, 2,588,000, a decrease of 3 per cent.; mixed grains, 909,350, an increase of 1 per cent.; hay and clover, 10,409,150, a decrease of 2 per cent.; alfalfa, 229,300, an increase of 1 per cent.; potatoes, 819,000, about the same as in 1919.

The Northwest Grain Dealers' Association have estimated the production for the three prairie provinces as follows:—Wheat, 14,026,000 acres at 15.2 bu., 213,245,000 bu.; oats, 10,973,500 acres at 32.8 bu., 359,000,000 bu.; barley, 2,108,000 acres at 23.5 bu., 49,538,000 bu.; rye, 237,500 acres at 16 bu., 4,400,000 bu.; flax, 1,181,000 acres at 7.1 bu., 8,385,000 bu.

Lumbering was rather less active in 1920, as the prices were lower. The fisheries on both coasts experienced a good year. The mines were also working practically to capacity and had less difficulty as regards labor supply.

### Transportation

The railways passed one of their greatest crises in 1920. Following a further wage award substantial increases in rates were granted, though not without strong objections from agricultural and commercial interests. The situation is complicated in Canada by reason of the difference in the financial condition of the two great railways. The Canadian Pacific is strong, and no doubt could have continued to render a fair service at the old rates. The Canadian National, on the other hand, is not yet in an independent position, and it is not anticipated that much will be left by way of return to the Dominion government on the investment after operation expenses and depreciation are met. The soundest argument presented

against the rate increase was to the effect that an effort should be made to make the Canadian National pay only after its capitalization had been written down to a more moderate level.

In the field of shipping the supply of space this year overtook the demand. There is a tendency towards keener competition and lower rates, for the building of new ships has now more than overtaken the ravages of the war. The Dominion government continued its construction programme and reported good financial results for 1919. This recently constructed have been at an excessive cost, however, and shipping authorities feel that many of them will not pay in future years.

#### Higher Rates for Public Utilities

The outlook for public utilities has greatly improved; the necessity for rates commensurate with the new level of operation costs is becoming impressed on the public. Many of the street railways in Canadian cities secured increases this year. The Bell Telephone Company made a successful application for higher rates. Gas and electric light and power companies all have felt the pressure of high costs, but the year 1920 found their position as a whole improved.

At the same time there is a growing feeling in favor of public ownership. The feeling of hostility towards all large corporations, engendered as a result of the high prices and large profits of the war period, will no doubt outlive any justification which did exist for such feeling. The acquisition and amalgamation of the Canadian Northern, Grand Trunk and Grand Trunk Pacific Railways by the Dominion government, the proposal for Ontario to purchase the hydro radials of the Dominion government and the power assets of the Mackenzie interests are recent examples of the movement in the government field, while practically every municipality which does not now own its street railway is planning to do so, and some are venturing into the operation of other services.

#### Manufactures

The manufacturing industries of Canada have kept up their record, but during the past year they have felt more and more keenly the vigorous free-trade movement set up by the organized farmers in Canada. Efforts made to combat this movement have, to a large degree, been successful; they have at least transformed the free trade into a tariff reduction movement, and have brought home to the city populations the fact that their prosperity is dependent upon the maintenance of a tariff wall. A commission to investigate the tariff was appointed by the Dominion government, and in September and October evidence was received at the more important cities throughout Canada. The findings of this commission have not as yet been announced, but it is an accepted view that a commission composed of three members of a protectionist government will scarcely advocate any appreciable reduction.

#### Tendency of Banks to Contract

Developments in the sphere of banking were of a mixed character. The movement of expansion extended through the early months, but the banks made a concerted effort to bring about a contraction of credit. This action was taken in anticipation of price reductions, and was beneficial to merchants who were still inclined to maintain heavy stocks of goods on hand. Reductions in credits first took place in the call money market, the maximum loaned at call in Canada having been reached in January, when the figure was \$132,015,334. By the end of June it had been reduced to \$115,360,894. Current loans continued steadily upwards, however, the total in Canada at the end of July being \$1,377,276,853, compared with \$1,226,962,963 at the end of January, 1920, and with \$1,014,387,206 at the end of July, 1919. Savings deposits showed a steady increase, though not as rapid as in 1919, while the level of demand deposits was higher than in 1919.

#### Good Year for Insurance

Unquestionably 1920 was one of the best years in the history of insurance in Canada. Life business continued to experience the expansion which showed such phenomenal results for 1919, but it is not expected that the increase in business

written in 1920 will be so great. There was no epidemic such as took place in 1918, and reappeared in lesser degree in 1919, to threaten the companies' surplus. The rise in property values brought about a substantial increase in the volume of fire insurance in force, and fire losses were about the same as in 1919, which was regarded as a fair year. There was growth in all branches of casualty insurance, further particulars of the experiences in which will be found in the series of reviews in the insurance section of this number.

#### Loan and Trust Business

There was no new development in the loan and trust field. The experience of the former as regards repayments of mortgage loans was good, as the general good crops in the west enabled the farmers in many cases to bring their payments up to date. There were sections, of course, in which crops were not so good this year, and further extensions had to be made. Funds for new borrowings were not plentiful, as the companies on the one hand were more careful in anticipation of lower prices for farm produce, and on the other hand were tempted to invest still more of their funds in bonds, which were obtainable at exceptionally low prices.

The trust companies again experienced an increased demand for their services. Corporate administration of estates is continually becoming more popular in Canada because of the undoubted advantages which it offers. One notable feature of the year was the greatly increased demand for safety deposit boxes, due to the more widespread holding of securities.

#### The Bond Market

The investment field witnessed some rather unexpected developments. Government and municipal bonds and other first-class securities sank to still lower levels. In spite of this, new issues were numerous and the low prices secured impose heavy capital charges on the provinces and municipalities. There was no Dominion government loan for the first year since 1913, but this important factor did not appear to strengthen the market to any appreciable extent.

The control of the Victory bond market resumed in January by the Dominion government, and the embargo on the import of securities which accompanied it, were two important factors in the investment field. Neither was successful in attaining the desired object, which was to prevent the decline in war bond prices and in security prices as a whole. The market showed a little strength towards the end of November, however, and control was removed.

#### The Stock Market

Corporation bonds moved downward in sympathy with the security market in general. The greatest collapse took place in the stock market, however, which reflects in greater degree the trend of business. The fall in the prices of sugar, rubber, steel and other leading commodities was followed and in some cases anticipated by the price movements of stock specialties. Liquidation of stocks was encouraged by the pressure of the banks.

In the face of these conditions the number of security issues was exceptionally large. The lists given elsewhere in this issue show that the provincial governments were very heavy borrowers, and while the smaller municipalities generally kept out of the market, the larger cities also borrowed freely. The high rates prevailing for New York exchange resulted in an unusual proportion of the new loans being placed there, heavy obligations for many years to come being piled up in this way. Corporate financing was also active, especially in speculative stocks. Theatre issues were especially numerous, and considerable interest was also evinced in mining and oil issues.

There has, therefore, been a good deal accomplished during the past year in the way of restoring business to a more healthy and normal state. The process of deflation is bound to bring its difficulties in the way of failures, contraction of profits and readjustment of wages, but there is good evidence that the process is being brought about gradually and the danger of collapse or panic is thereby minimized.

# Business Indices Reflect Contraction of Business

Peak of Business Activity, As Reflected By Bank Clearings, New Building, Failures, and Other Figures, Was Reached at Beginning of 1920—Building Inactive, While Failures Increase—Falling Stock Prices Anticipate Further Business Contraction

CANADIAN business reached its greatest activity in January, 1920, according to an average of commonly accepted indices, compiled by Babson's Statistical Organization, Wellesley Hills, Mass., and graphically presented below. The black areas are formed by combining and plotting figures on Bank Clearings, New Building, Failures, Commodity Prices, Railroad Earnings, Security Prices, Ratio of Bank Cash to Liabilities, and Money Rates—subjects which, taken together, make a reliable measure of general business. The X-Y line represents the average gain or growth in business. In locating the X-Y line we have assumed that the law of equal action and reaction applies to business and

growth of the country, with a more rapid increase in 1907, a year of crisis. The year 1914 again brought depression, with many failures up to the middle of 1915, when war-time expansion commenced. Thereafter the number of failures fell to a very low point in 1918 and again in 1919. The past six months have found them growing rapidly.

## Building Operations

Building was very inactive during the war years. There was a slight revival in 1918, due to the great scarcity of houses and business plants which was making itself felt; a substantial revival took place in the summer of 1919, and

Copyright All Rights Reserved and Patented

economic phenomena just as it does to mechanics, chemistry, medicine and other sciences. In other words, for every degree of over-expansion in business a corresponding rest period or depression must be experienced. The X-Y line, therefore, is drawn to make the two areas of each cycle equal, its trend being determined in accordance with such statistics of growth as are available.

## Two Cycles Completed

There are now two complete cycles on the plot. The first (Areas B and C) runs from the end of 1905 to 1908. The second (D and E) runs from 1908 to the latter part of 1915. For the past five years a large area of business expansion has been developing, which indicates that a reaction in trade may normally be expected.

The red line represents the monthly average prices of ten stocks. The solid black line shows failure liabilities; the dotted black line, new building. The figures for new building and commercial failures are plotted quarterly.

The movement of failures, it will be noticed, is very irregular. It seems usually to be higher at the end of each year, because that is the end of an accounting and settling period and also because business is usually quieter at that season in Canada. There was a gradual increase, however, from 1904 to 1914, which was not out of proportion to the

in the summer of 1920 operations again approached their pre-war proportions, followed by the usual autumn decline.

Stock prices are the most sensitive of all business indicators, anticipating the others by several months, and these do not hold out any hope of revival. The high levels of 1916 were followed by a long decline, in anticipation of the post-war depression which was bound to come. In 1918 and 1919, however, the reconstruction activity was anticipated by an upward movement, which culminated in November, 1919, but after which a real fall did not take place until the third and fourth months of 1920.

The average trend of business, represented by the black area, indicates that the second half of the cycle commencing in 1916 has set in, and that a fairly long period of depression may be looked for.

In the developments of the next few years, therefore, an increase in the number of failures and reductions in profits, as reflected by lower stock prices, may be looked for. Nor can the volume of building be expected to increase very much until such time as costs have been reduced to a level commensurate with market values. Bank clearings, railroad earnings, loans and trade figures should show reductions in accordance with the condition of business as a whole. Rates for money, on the other hand, should before long show an easier tendency.

# More Stable Policy Needed for Welfare of Canada

Slump in Prices is Test of Country's Industries—Europe's Need Does Not Help Business Here—What Measure of Tariff Protection Necessary Could Be Scientifically Ascertained—National Debt and the Resulting Burden on Industry

By W. W. SWANSON, Ph.D.

Professor of Political Economy, University of Saskatchewan

IT was pointed out in the early months of the war by Prof. S. Patten of the University of Pennsylvania that a sudden decline in prices after the cessation of hostilities might easily wipe out all the war profits of the republic and cause hardship and suffering throughout the world unparalleled in modern economic history. While it is quite true that natural resources, farms, factories and other concrete economic goods would remain after such a collapse of prices, nevertheless the actual loss of wealth following a steep fall in market values would adversely affect the entire business life of the nation. It is of fundamental importance to speed up production in Canada, but it is equally important to protect prices as far as may be by refusing to give way to panic and the forces that make for business depression.

It is admitted that Canada cannot escape the effects of world-wide economic conditions, but much can be done to maintain confidence in what is fundamentally sound in the nation's economic life. Only a few years since trust-baiting was a favorite pastime of demagogues and their followers in the United States notably, as well as in the Dominion; but the sober sense of the people has taught them that in the long run business, big or small, must rest upon the good-will and confidence of the people or it cannot endure. And what is true of business in general is doubly true of the great basic industries within the confines of our common country. The time is opportune to make an earnest effort to co-ordinate the interests and activities of the manufacturers, the agriculturists and the several governments concerned to the end that good-will may displace mutual suspicion and conflict. While there always will be large issues of national economic importance upon which opinion will be divided, there is much common ground that can be cultivated for the common good. Confidence in the integrity and fairness of men who control industries and governments is the sine qua non of national stability and progress.

## The West's Grievances

Rightly or wrongly, the agricultural West has felt that its industrial progress has been limited and thwarted by the short-sightedness and selfishness of the manufacturing and financial East. The fact is there, whatever its causes, and it will do no good to speak of the sacrifices of the east in railway building and the like for the development of the prairies. The people of the west are persuaded that they are carrying their fair share and more of the common burden of exploiting and developing the natural resources of the nation. The various provincial governments have, on the whole, given sympathetic consideration to the conserving of the agricultural interests of the people, but in general the Dominion's national economic policy has placed the emphasis to too great an extent upon manufacturing and to too small a degree upon agriculture. As an excuse it is asserted in certain quarters that a growing population can be provided for only by expanding industry and commerce—that the amount of food required from the farm is limited in amount, while the consumption of manufactured goods has no definite limits. This loses sight entirely of the significance of the relation of food supplies to an expanding population and an expanding industrial environment.

In his "Economic Consequences of the Peace" J. M. Keynes draws attention to the fact that as late as 1890 Europe had a population more than three times as great as the entire population of the North and South American continents. Since that time the populations of the new world and the old have vastly increased. Before the war Russia was expanding at the rate of 2,000,000 annually, Germany at the rate of 850,000,

and Austria-Hungary at 500,000. Europe was making vast gains in population each year while on this side of the water the increase in numbers was equally rapid. The net result was a relative dearth of foodstuffs throughout the western world.

## The Cost of Food

This growing shortage of food supplies was evidenced by the rising prices of foodstuffs everywhere. Mr. Keynes reaches the conclusion that the economic law of diminishing returns was at length making its effects felt—that population was pressing hard upon the means of subsistence. It was in 1798 that Thomas Malthus formulated and presented to the public his famous hypothesis of the relation of food supplies to population; but the opening up of new areas of supply during the nineteenth century caused his theories to fall into discredit, when they were not forgotten. Once more, however, the relation of agriculture to industry becomes of surpassing importance, particularly in view of the fact that the United States is rapidly approaching the point where it will be rather an importer than an exporter of wheat and other food commodities.

The bearing of all this upon the present agricultural situation in Canada is patent. Upon the prairies there is discontent among both grain growers and stock producers with past economic policies and present prices. The market for farm products may be extensive and constantly expanding because of the growing necessities of the world, but all that avails nothing if the agriculturist cannot make a living commensurate with the efforts and sacrifices undergone. Canada's greatest agricultural province, Saskatchewan, already begins to show the effects of the narrowing of the gap between market prices and costs of production. According to the figures recently furnished to the legislature by the Hon. Chas. Dunning, that province has seen more than one million acres go out of cultivation in 1920. The total area under cultivation in 1919 was 23,585,000, whereas the figures for 1920 are only 22,549,000. The wheat acreage for 1920 showed a decrease of 520,000 acres as compared with the previous year. The yield per acre had increased from 8.5 to 11.2, the total yield of wheat for 1920 being estimated at 113,125,000 bushels. Both the yield per acre and the area under cultivation of oats are larger for 1920 than for the previous year, the total yield of this grain being placed at 141,549,000 bushels. There was an increase of 27,000 acres sown to barley, and of 210,000 acres sown to flax, while there was a falling off of 18,000 acres sown to rye. There was a decrease of summer-fallow from 4,995,000 in 1919 to 3,751,000 in 1920, while the new breaking in 1920 amounted to only 549,000 acres. In cattle, horses and swine there has been a heavy reduction in the numbers held, sheep alone showing an increase. The price factor and the high cost of production have been the chief reasons for this serious falling off of agricultural production. The decline in prices brings with it an enormous decline also in the purchasing power of the west.

## Raw Materials and Manufactured Goods

It is not forgotten that the falling off of market prices is a phenomenon that characterizes the production of raw materials everywhere—from lead and zinc, copper and silver, to sulphur, tea, coffee, cotton, raw silk and rice. Nevertheless, it avails our farmers little to be assured that they are not the sole sufferers in the liquidation of values. The simple fact is that if too wide a gap is fixed between what the producers of basic raw materials bring to market and what they must buy for family purposes and to take care of the processes of pro-

duction, the fundamental industries will stagnate. This would be fatal not only for those territories and countries still in the pioneer stage of development, but for the secondary industries depending upon them for support, for markets, and for buying power, and for raw materials as well. Steps should be taken, therefore, not only to aid the agricultural community to reduce its costs of production but to alter its psychological attitude to the buying of essential products. The markets of the west and the export trade are vital to the manufacturing east, both in Canada and the United States as well.

#### What Industries Need the Tariff

The psychology in the situation rests upon the economic factors involved. Chief among these economic factors are the tariff, finance and railway rates. With respect to the tariff it will no longer suffice merely to ask critics of protection to name specifically those industries that can exist without artificial aid, as Sir Henry Drayton asked Mr. Wood, president of the United Farmers of Alberta, at Calgary. There ought to be a scientific study of the tariff in Canada, similar to that undertaken in the United States for the tariff commission by Professor Taussig of Harvard and his staff of able assistants. Such an examination could determine whether our manufacturers of agricultural implements and farm machinery, if granted customs-free raw materials, are actually in a position to give up the advantages of a protective tariff. Moreover, it could also be decided what are the so-called "key" industries requiring protection to render the Dominion secure in war and peace, and which are the "luxury" industries for which the nation is paying too great a price. Finally, the complex and difficult problem of the relation of protection to necessary public revenues could be at least tentatively solved. Such a scientific study, undertaken by experts and representatives of all classes, would accomplish something enduringly good, whereas the present tariff inquiry gets the nation nowhere. It is worth while emphasizing these factors, for beyond doubt the decline in the demand, at present, for manufactured products is due in no inconsiderable measure to the belief on the part of the agricultural producers of the west that their economic interests have been sacrificed.

#### Need for the Wheat Board

The disclosure of facts under scientific analysis will do much to allay suspicion and make for the building up of goodwill among the great economic groups in Canada. Nothing is so unsettling to business as a state of unstable equilibrium occasioned by mutual distrust. What is required, among other things, is the working out of a definite national economic policy that will give due weight to the interests of the agricultural community. The wheat board, for example, should be reconstituted, not perhaps to assume the responsibility of actually marketing the farmers' big cash crop, but for devising ways and means to assist in the marketing of that crop to the best advantage. Some such organization is essential, not merely for the marketing of wheat, but for the furnishing of accurate information with respect to markets for other farm products. Such a body should also institute studies concerning costs of production, distribution and final sale of agricultural commodities. With such data available something worth while could be attempted to promote the best interests of Canadian agriculture. A case in point is the purchase of the entire output of New Zealand's butter by the British government, with a consequent decline in the domestic and export prices of the Canadian commodity. The dairy industry is an expanding one in the west and becoming of great economic importance in agricultural operations. Balanced farming is not only economically sound but of vital importance to the stabilizing of agriculture; but it is discouraging to produce the goods only to find the markets blocked.

#### Debt and Taxes Are Heavy

On the other hand, it is equally essential to find steady and profitable employment for factory operatives and those engaged in commercial pursuits, as well as to discover markets for the output of their labor. It has often been stated, but it requires constant repetition, that the Dominion is in need of a settled economic and political policy that will conserve the

interests of all classes of producers. The net debt of the nation is, in round numbers, \$2,225,000,000, and is still growing. True, revenue is also increasing in a way that will take care of fixed charges and current expenses, but the greater part of that revenue—customs, excise and war taxes—is derived from taxation and represents a heavy burden upon industry. Among the nations of the world Canada is in a strong financial condition, but the finest statesmanship and the greatest efforts on the part of all will be essential to keep it there. During the past twelve months the external trade of the nation has amounted to more than \$2,500,000,000, the imports being in excess of exports by approximately \$125,000,000. Imports from the United States are dangerously in excess of exports, and every effort should be made to widen our export markets in the Republic and in Europe.

To do so will involve a heavy reduction in costs of production and selling prices. Until Europe is economically rehabilitated prices will not be materially hardened by extensive sales there. On the other hand, the plant equipment of the Dominion, consisting of field, mine, factory, railway and shop, is capable of far greater production than in the days preceding the war. A great deal of necessary work, with restored confidence, lies ready at hand in Canada in "deferred maintenance"—in the construction of buildings, and the production of railway and other equipment halted by the war. There is an immense amount of construction that ought to be immediately undertaken by the federal and provincial governments, in the building of public works, the St. Lawrence deep waterway system, and the making of roads. Such economic undertakings would stimulate the demand for the output of factories and aid in keeping the wheels of industry revolving. To those who insist upon public economy it may be replied that a collapse of Canada's industrial system, with consequent unemployment, would in the end place far heavier burdens upon the people, industry and the government than any additional tribute of taxation now to take care of interest upon public capital expenditures.

#### Demand Limited by Purchasing Power

It must be squarely recognized that owners can operate plants only if costs of production are met, including a fair return on capital. True, the European nations are in need of goods, but that need can be translated into economic demand only as it is backed by purchasing power. The old analogy based upon civil war conditions and following prosperity does not hold good to-day for the simple reason that the civil war struggle was a domestic struggle and confined to a single territory, permitting the United States to depend upon Great Britain and other wealthy nations for financial aid. Since the armistice the United Kingdom has labored hard to revive the trade of the continent, but the task is too stupendous for the efforts of one nation alone. The action of the United States in refunding only \$100,000,000 of the Anglo-French loan further depressed European exchange and made it more difficult for the British and French to purchase the goods produced on this continent. As a first and essential step in increasing the buying power of Europeans the United States must come to the financial support of those war-stricken nations.

#### Danger of Unemployment

The great danger threatening the economic life of Canada and the United States is that under-employment may develop, or unemployment, with resultant low wages, or their lack, and a general breakdown of the standard of living, and hence of the buying power of the masses. During a period of falling prices, also, there is little or no incentive for the manufacturer to extend his plant and engage in new enterprises. The factor in the situation, therefore, making for business stability is the discovery of new markets for the output of our factories and the prevention of a sudden collapse of prices. The laws of the United States have been adapted to meet changed conditions, and now permit and encourage export associations of American manufacturers. It is highly expedient that Canadian business be fostered and developed by similar measures, notably by export associations and the sending of able agents abroad to broaden export trade with the United States. For under the new price conditions a larger volume of goods must be produced to enable manufac-

turers and the government to carry their financial obligations.

Germany, before the war, owed its commercial and industrial success in no small measure to efficient financial, as distinguished from commercial, banking. German financial institutions were prepared to hold long-term securities as the basis of financial support for the export trade of German manufacturers. The question has already been raised in London as to what can be done to establish a bank of rediscount for the

empire, but the equally important problem remains to be solved as to how long-time credit can be offered by British and Canadian manufacturers without dangerously placing limits upon their liquid assets. It is not the business of commercial banking to assume such risks, but the time is at hand when Canadian manufacturers must find some safe method of granting longer credits if they are to strengthen their position in foreign markets.

## Canada's Economic Progress at a Glance

Development of the Dominion Geographically Illustrated in Figures of Production, Trade Banking and Currency—Effect of the War on the Country's Industry Clearly Reflected

THERE is no better and easier way of describing the economic development of a country than by statistics. A few well-selected figures contain more information than any literary volume in this respect. In the following tables, which have been carefully prepared and selected by *The Monetary Times*, the economic progress of the Dominion is graphically illustrated:—

### POPULATION

Year	Population	Immigration	
1871	3,689,257	1897	21,716
1881	4,324,810	1900	23,895
1891	4,833,239	1905	146,266
1901	5,371,315	1910	208,794
1911	7,296,643	1913	402,432

CANADA'S PROGRESS GRAPHICALLY ILLUSTRATED

FRUIT PRODUCTION UNUSUALLY LARGE

The largest crops of fruit so far grown in southern Ontario were grown in the year just ended. Prices of some fruits were the lowest since 1914. This fall in prices, coupled with the high cost of labor, of containers, of freight and other expenses, cut down the profits of the growers. "Perhaps the worst year we have ever had in our whole history as fruit-growers," was the way a prominent fruit-grower summed up the situation in the Niagara fruit belt. The growers claim they have made hardly any money on the great output of peaches, cherries, plums, etc.

# New Government Legislation and Its Effects

Taxes Imposed at 1920 Session Have Swelled Dominion's Revenue—The Government Shipbuilding Subsidy—Soldier Settlement Plan and Its Results—The Tariff and the Tariff Commission—New Trade Relation Established

THE 1920 session of Parliament, which opened on February 21st and closed on July 1st, was notable more for the importance rather than for the number of its enactments. In volume its product was not nearly as large as that of the first session in 1919, but especially in matters of taxation there was a launching out along new lines which made its work of a very high order of importance.

The first Drayton budget represented something new in Canadian taxation methods and general fiscal policy. As experience has shown, it was sagacious; but before results were forthcoming to determine whether it was sagacious or not it was generally admitted to be courageous. Pay-as-you-go as a national policy sounded well, but the question was: How will it work?

## New Taxation Has Been Productive

Confronted by the problem of raising nearly \$600,000,000, Sir Henry cut expenditure as much as possible, but evidently realizing that he could not by this means hope to make income balance expenditure, he cast about for new sources of revenue and decided to introduce the luxury and sales taxes, and also made certain increases in the income tax. At the same time he courageously reduced the business profits war tax and the 7½ per cent. customs war tax. He estimated the revenue at \$381,000,000 and said that collections on outstanding accounts and balances due from Great Britain would probably amount to \$570,000,000. There was no definite estimate of what the new taxes would yield.

Under the classification "New excise taxes" are included the taxes on luxuries. These, imposed with a view to check the expenditure on what may be considered non-essentials, were considerably altered by the time they had left the committee stage. They are so based and scaled as to exempt, as far as possible, goods of a nature and price such as may be considered necessary. They are paid by the purchaser to the vendor at the time of sale and delivery for consumption and use. They range from 10 to 50 per cent. The tax on beer, wine and spirits was also increased.

The sales tax, which is in addition to the excise and the customs tax, is a tax of 1 per cent. collected on all sales by manufacturers, wholesalers or jobbers, and on the dutiable value of importations, but in respect to sales made by manufacturers to retailers or consumers, or on importations by retailers or consumers, the rate is 2 per cent.

Stamp taxes, the tax on cheques, was continued, the rate being increased on bills of exchange and promissory notes so as to provide a two-cent tax on all bills or notes of \$100 or less, and for every additional \$100 or fractional part thereof two cents more. A tax of two cents for each share of stock transferred was also imposed.

## Income and Business Profits Taxes

The rate on incomes of \$5,000 a year and upwards was increased by 5 per cent. As a result the tax on a personal income of \$5,000 brings \$126, compared with \$100 before; on an income of \$50,000 \$9,649.50 is collected, compared with \$5,782, and on \$100,000 the collection is \$10,500, as compared with \$6,000.

The business profits war tax was continued but reduced, the exemption being extended from 7 to 10 per cent. The new schedule is as follows: On profits in excess of 10 per cent. but not exceeding 15 per cent., tax 20 per cent. On profits in excess of 15 per cent., but not exceeding 20 per cent., tax 30 per cent. On profits in excess of 20 per cent., but not exceeding 30 per cent., tax 50 per cent. On profits over 30 per cent., tax 60 per cent. The tax on profits of business with a capital of not less than \$25,000 and under \$50,000 was reduced from 25 to 20 per cent. on all profits exceeding 10 per cent. on the amount of capital employed.

The customs war tax, which amounted to 7½ per cent. was abolished. The other tariff changes were of minor importance.

## Tariff Revision Promised

Sir Henry announced that the tariff commission would begin its enquiry after prorogation. He also stated the tariff policy of the government as follows: "Our policy calls for a thorough revision of the tariff with a view to the adoption of such reasonable measures as are necessary: (a) To assist in providing adequate revenues; (b) to stabilize legitimate industries and to encourage the establishment of new industries essential to the proper economic development of the nation, to the end that a proper and ever-increasing field of useful and remunerative employment be available for the nation's workers; (c) to develop to the fullest extent our natural resources; (d) to specially promote and increase trade with the Mother Country, the sister dominions and colonies and crown dependencies; (e) to prevent the abuse of the tariff for the exploitation of the consumer; and (f) to safeguard the interests of the Canadian people in the existing world-struggle for commercial and industrial supremacy."

## Assistance to Shipbuilding

In order to assist Canadian shipbuilding plants in securing foreign orders legislation was enacted authorizing the government to make advances upon approved securities up to 50 per cent. of the value of such orders, a condition being that one-fourth of the value of the vessels ordered should be paid for in cash, the other fourth to be arranged for by the builder. The advances thus authorized were \$20,000,000. Mexico endeavored to take advantage of this provision, but owing to the instability of conditions in that country her application was not entertained. It is understood that other applications have been made.

## Railway Problems

Railway matters occasioned a great deal of discussion, as these involved an expression of opinion on the cost of operating the Canadian National system and the Grand Trunk, together with opinions as to their value and the extent of the obligations assumed in the taking over of these enterprises. The statement of the minister of railways to the effect that the deficit on government railways was \$48,611,000 produced a lengthy debate, the opposition contending that in reality the deficit was much larger. There was further discussion over the authorizing of advances for approximately \$17,000,000 to the Canadian Nationals for equipment, also over the authorizing of a loan of \$25,000,000 to the Grand Trunk. During the year the Canadian Nationals floated a \$15,000,000 equipment loan in the United States, guaranteed by the Dominion government, while another loan of \$25,000,000, issued by the Grand Trunk and also guaranteed by the Dominion government, was disposed of over there.

Among acts of special importance to men of business was that relating to trusts and loan companies, and which, in so far as inspection is concerned, placed them on the same basis as insurance companies. The inspection will be of a regular nature. The Supreme Court Act was amended so as to bring about a simplification and uniformity of procedure in matters relating to the court and to prevent appeals being brought before it in matters of a low order of importance. Appeals are now restricted to cases in which the amount at issue exceeds \$2,000 in value exclusive of costs; in all other cases appeals shall be made by special permission of the highest court in the province.

A considerable increase was made in pensions to returned soldiers. The wheat board gave rise to much discussion, the

government being given power to recreate the board if it were deemed advisable to do so.

#### Soldier Settlement

The soldier settlement scheme developed rapidly during the year and has proven to be undoubtedly the most important permanent colonization effort of its kind that Canada has ever seen. To date approximately 57,000 returned soldiers have made application for the purpose of qualifying and thus taking advantage of its opportunities. No less than 41,000 have been declared qualified, while over 19,600 have received advances amounting to about \$80,000,000.

Alberta has received by far the largest number of these settlers, followed by Saskatchewan, Manitoba and British Columbia. Of the total over 85 per cent. have located west of the great lakes, the figures by provinces being: Alberta, 5,637; Saskatchewan, 4,783; Manitoba, 3,250; British Columbia, 2,907; Ontario, 1,374; New Brunswick, 493; Quebec, 454; Nova Scotia, 392; Prince Edward Island, 291.

The loans approved by the provinces are: Alberta, \$22,410,192; Saskatchewan, \$19,352,307; Manitoba, \$13,057,770; British Columbia, \$12,437,650; Ontario, \$5,931,605; Quebec, \$1,884,938; New Brunswick, \$1,413,684; Nova Scotia, \$1,376,130; Prince Edward Island, \$783,377. The distribution of loans has been as follows: To purchase land, \$42,778,768; to remove encumbrances, \$2,173,955; for permanent improvement, \$9,039,823; for stock and equipment, \$24,555,107.

#### Will Increase Farm Production

From the standpoint of its contribution to agricultural production the scheme is of very great importance. To date it has resulted in the locating of 20,000 men on the soil and under conditions so favorable that with ordinary luck they cannot help but make good. These men have, in form of soldier grant entries, received over 1,600,000 acres, and another 500,000 acres through the exercise of their civilian right, or a total of over 2,100,000 acres. It is also to be remembered that less than one-half of those qualified have been placed. Now, 2,100,000 acres sown to wheat and yielding 16 bushels per acre, which was the average for all Canada this year, would produce over 33,000,000 bushels of wheat, an amount equal to the spring wheat yield for all Canada in 1900.

It may also be pointed out that this average is greater than that under crop in the whole of the maritime provinces as late as 1914.

The value of this settlement may also be stated in another very striking way. The C. P. R. estimates that the yearly value to the railways of the average farmer settler in the west is \$746.33, this figure being obtained through dividing the number of farmers in the prairie provinces into the revenue derived from the movement of agricultural produce, also coal and in-and-outgoing passenger traffic. Capitalized at 5½ per cent. \$746.33 is worth \$13,569.63, which, the C. P. R. concludes, is the value of each western farmer to the country. In this basis of calculation these 20,000 farmers placed through the soldier settlement board should be worth \$270,000,000 to the country. If all those qualified go on land the value of the total settlement to the country should equal half a billion dollars.

#### Returned Soldiers' Insurance

Among other legislation of the session was the Returned Soldiers' Insurance Act, which came into operation on September 1st, 1920. It applies to returned soldiers and to the widow of a returned soldier who died after honorable discharge from service and before September, 1921. Policies are issued for a minimum of \$500, and in multiples up to \$5,000. The insurance money is payable only at death or on permanent disability of the insured, the maximum amount paid in one sum being one-fifth of the amount of the insurance, the remainder being paid in annuities. The insurance must be applied for before September 1st, 1922. The amount of such insurance in effect at the beginning of November was \$2,203,000, the number of policies issued being 649.

The tariff commission, consisting of Sir Henry Drayton, chairman, Hon. J. A. Robertson and Hon. Dr. Tolmie opened

its sessions in Winnipeg on September 18th, where representatives were heard chiefly from the Canadian Manufacturers' Association and the Grain Growers. In the west sittings were also held at Medicine Hat, Vancouver, Victoria, Vernon, Nelson, Trail, Calgary, Edmonton, Saskatoon, Regina and Brandon; also at Fort William and Port Arthur, and Sault Ste. Marie. The eastern itinerary opened at Charlottetown on November 4th, other places visited being Sydney, Halifax, St. John, Moncton, Quebec, Sherbrooke, Three Rivers, Montreal, Kingston, Hamilton, London, Windsor and Toronto.

#### Results of New Taxes

The new taxes, together with the more vigorous and efficient collecting of the income tax, have produced abounding revenues so far during the current fiscal year. Very gratifying indeed have been the returns from the luxury and sales taxes, these, with a reduction in expenditure, having enabled the finance department to report at the end of October a reduction of \$2,634,356 in the net national debt during the month. The receipts from the luxury and sales taxes, which are included under the item internal revenue, were \$38,985,991 for the seven months ending October, an increase of \$30,870,000 over the returns for the same period in 1919. During October they were \$9,534,178, as compared with \$1,045,708 in the preceding October. The reduction in the business profits tax is shown in the reduced collections, which amounted to \$16,889,720 for the seven months, compared with \$17,787,975 for the preceding seven. The income tax collections were \$7,297,512, compared with \$1,946,419. For October alone they were \$712,093, against \$272,691 for the same month last year. The customs collections for the first six months of the fiscal year ran over \$24,000,000 ahead of those for the same months in 1919, but in October they began to fall behind. Up to October 31st the total revenue for the fiscal year was \$256,576,967, compared with \$186,408,794 for the same period in 1919.

At this rate the revenue for the fiscal year would amount to \$437,000,000, and it is quite possible that this amount may be realized. Certainly \$400,000,000 seems to be within reach. The customs revenue has been surprisingly high, the average for the first seven months being \$17,546,000 a month, which, if maintained, would mean over \$200,000,000 for the year. When he announced the abolition of the 7½ per cent. customs war tax Sir Henry Drayton expressed the view that the collections might be \$160,000,000 for the year. That they have so exceeded expectations has been due to the unexpectedly heavy importing, especially from the United States.

These revenue figures make those of pre-war days look small. In the fiscal year 1912-13 the total revenue was but \$168,690,000 and constituted the record up to after the outbreak of the war. The revenue for this year will exceed that by more than two and one-half times. Nor can it be said that the present revenue occasions hardship. As an evidence of how the per capita revenue has increased it may be pointed out that in 1868 it was equal to \$4.05 per capita; in 1878, \$5.49; 1888, \$7.66; 1898, \$7.80; 1908, \$14.80; 1918, \$30.35; 1920-21, probably \$44.

The department of finance made a praiseworthy departure during the year in altering the balance sheet by eliminating a number of "inactive" assets, or assets of a doubtful character. It is true that in doing so the net national debt was increased by well on to \$300,000,000, but there was nothing to be gained by including among the "active assets" a number of loans to railways that had been taken over by the government. The net national debt now stands at approximately \$2,275,000,000, and the gross at approximately \$3,045,000,000.

#### Canada-West Indies Trade Agreement

The Canada-West Indies trade agreement was negotiated as a result of a conference held during June between representatives of Canada and the Bahamas, Barbados, Bermuda, British Guiana, British Honduras, Jamaica, Leeward Island, Trinidad and the Windward Islands. By it Canada affirmed the principle of granting a preference on all goods the product or manufacture of any of the foregoing colonies imported into the Dominion which are subject to duty, or may be subjected to duty at any future time, and the colonies reciprocated. The

duties on all goods, other than tobacco, cigars, cigarettes, spirituous or alcoholic liquors, are not to be more than 50 per cent. of the duties imposed on similar goods imported into Canada from foreign countries, special treatment being granted to sugar imported from the islands. Subject to certain special provisions, the duties on all dutiable goods other than tobacco, cigars and cigarettes, which are the product or manufacture of Canada, shall be imported into the colonies according to the following preference: In the case of Barbados, British Guiana and Trinidad, 50 per cent.; British Honduras, the

Leeward Islands, and Windward Islands, 66% per cent.; Bermuda and Jamaica, 75 per cent.; Bahamas, 90 per cent. of the ordinary tariff rate. Special provision was also made for the establishing of direct mail, passenger and freight steamship service between Canada and the British West Indies. The treaty is subject to the approval of Parliament and of the legislature of each of the colonies and of the colonial secretary. All the colonies have ratified it. It will remain in force for ten years after proclamation of it and be terminable on twelve months' notice.

## Wide Fluctuations Shown in Employment

Very Little Unemployment in Summer Months, But Rapid Increase in Fall—Seasonal Fluctuations Greatest in Prairie Provinces, Proportion of Applicants to Vacancies Grows—The Work of the Employment Service of Canada

By **BRYCE M. STEWART**  
Director, Employment Service of Canada

IN 1919 a nation-wide employment service was established in Canada by the Dominion and provincial departments of labor in co-operation. In this Canada anticipated the recommendation of the international labor conference that "Each member which ratifies this convention shall establish a system of free public employment agencies under the control of a central authority." At present there are 75 offices in oper-

The service regards the placing of applicants in employment and the recruiting of employees for employers as a local problem in the first instance. If, however, the local office is unable to fill all its orders or place every applicant in its own zone of operations the surplus of demand or of labor is reported to the clearing house of the province. The provincial clearance officer is constantly receiving these reports of aver-

ation, distributed among the provinces as follows: Nova Scotia 4, New Brunswick 1, Quebec 5, Ontario 27, Manitoba 9, Saskatchewan 9, Alberta 5, British Columbia 15. For the 11 months ended November 20, 1920, the number of vacancies notified to the offices of the employment service was 452,293, of which 394,710 were for men and 57,583 were for women. Applications for employment for this period numbered 450,544, of which 407,422 were received from men and 43,122 from women. The placements of men were 314,981, and of women 27,529, a total of 342,510. In addition 73,803 casual placements were effected. The total placements for the calendar year will be approximately 450,000.

ages and circulating them in clearance bulletins throughout all the offices of the province. Frequently a local superintendent is able to match his surplus of carpenters, for example, with an unsatisfied demand for these tradesmen in some other locality. He communicates by telephone or telegraph with the other superintendent concerned and arranges a transfer if both parties are satisfied.

After demand and supply have been ironed out in this way as smoothly as possible over the province the provincial clearance officer reports any orders for employees or applications for employment still unsatisfied to the Dominion clearing house of the district—at Winnipeg for the west, at Ot-

tawa for Ontario and Quebec, and at Moncton for the maritime provinces. The Dominion clearing house circulates these items among employment offices in adjacent provinces, or if it seems desirable in all the remaining offices of the country. As before, the local superintendents are authorized to communicate directly with one another in arranging to transfer persons to satisfy orders in interprovincial circulation.

**Reduced Railway Rates**

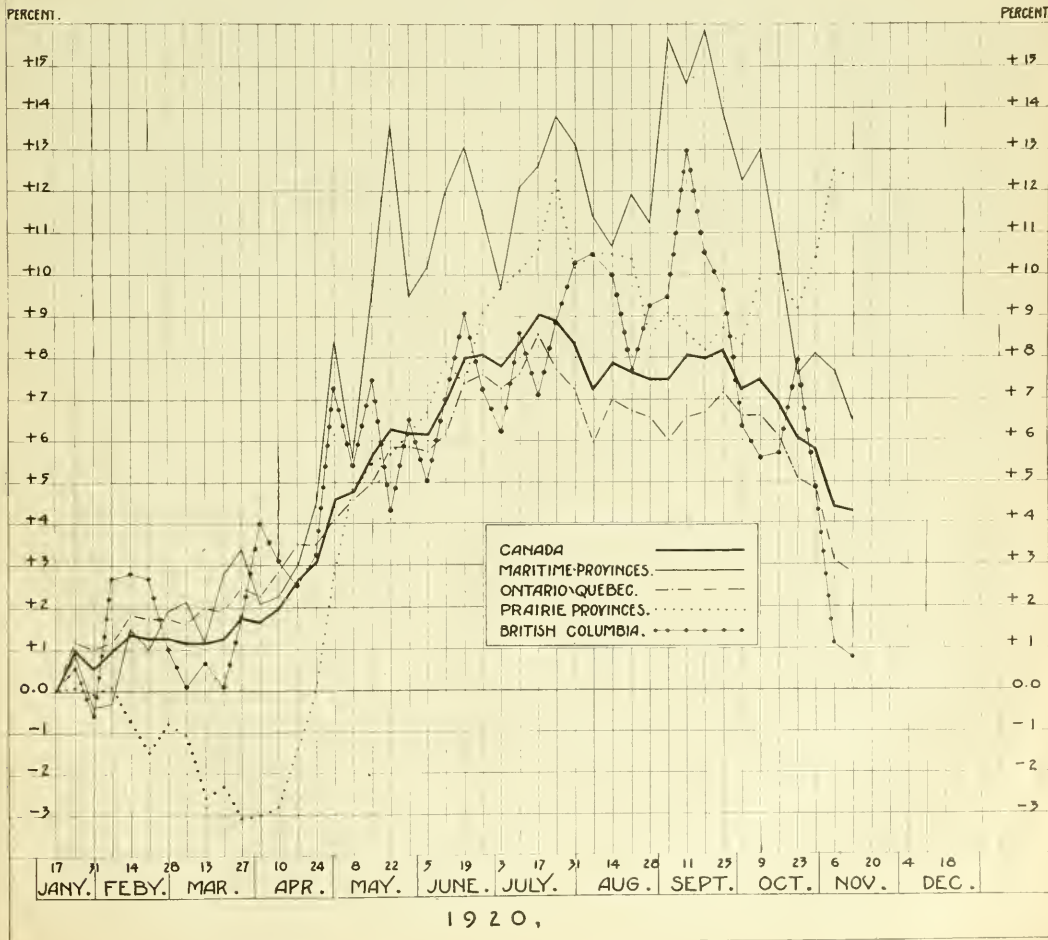

To assist the service in this clearance work a special transportation rate for persons being sent to employment at a distance has been granted by all the large railways. Under this transportation arrangement a reduction from the regular fare is granted on all trips of 116 miles or more, a flat rate of \$4 being charged on trips from 116 to 177 miles, and a rate of 2½ cents per mile on trips of more than 177 miles. Re-

duced fares are granted to applicants on presentation of a certificate signed by the superintendent of the local employment offices. The certificate is granted, of course, only in cases of bona fide placements through the employment service. The rate presupposes the existence of a well-organized system of provincial and interprovincial clearance to insure that persons will not be despatched long distances when suitable employment is available near at hand. The importance of this reduced fare plan in enabling the service to secure employment for persons who would otherwise be out of work, and at the same time to increase production, can scarcely be over-emphasized.

**Relation of Employment to Industry**

The reports of applications, vacancies and placements received from the local offices afford a valuable index of labor market conditions and the accompanying chart is of some in-

PERCENTAGE CHANGE IN NUMBER OF PERSONS ON PAY-ROLLS, AS REPORTED WEEKLY BY EMPLOYERS MAKING RETURNS FOR CANADA, AS A WHOLE AND BY DISTRICTS .

terest from that standpoint. It shows that from March 1, 1919, when the statistics first became available, until the last week of July, the spread between the supply of labor as indicated by applications for employment and the demand for labor as evidenced by employers' orders was never very great. The supply, as would be expected, was somewhat in excess of demand in the early spring but demand was slow to overtake supply and it was not until the end of June that the number of workers required was in excess of the applications for employment. Industry had not completed the change from war to peace production and as demobilization threw thousands of men on the labor market the usual spring absorption was delayed. Indeed it was not until the heavy demand for labor for the western harvest that demand rose above supply pronouncedly. During the autumn orders for labor kept up very well and a surplus of labor was not registered until the second week of November, with the release of num-

organized. Reports of the number of persons on pay-rolls are received weekly from 5,000 industrial enterprises employing about 700,000 workpeople. Assembled by industrial groups they constitute a very good barometer of the employment situation in industry. The accompanying chart shows the change weekly in the number of persons employed since the base week—January 17—as reported by employers making returns from Canada as a whole, and by districts. It had been planned to use the first week of the year as a base, but this was found impracticable because of the annual holiday and inventory-taking period which occurs at that time. The percentage change rather than the actual number of employees is used in plotting the curve for the reason that the number of returns received weekly is not constant.

Taking the reports for all Canada the curve for the first few weeks shows the recovery from the holiday season, but from the middle of January until the 1st of April it remained

bers of men from railroad and construction operations and from farm work.

#### Recovery Last Spring

All through the winter until the end of March, 1920, the employment service carried a surplus of applicants on the registers, a peak being reached early in January when the registration of unemployed ex-service men for the federal emergency appropriation was heaviest. In the spring of 1920, however, recovery from the winter slackness was much earlier than in 1919, the curve of demand rising above the curve of supply about the 1st of April, as compared with the end of June in the previous year. The demand for labor for the western harvest was also somewhat heavier than in 1919 and in the record week of the harvest season, as well as of the year, 17,500 placements were effected as against 13,500 in the corresponding week of the year previous. Evidence that we are entering upon the winter of 1920 with a lesser volume of employment than at the beginning of last winter is afforded by the fact that in 1919 the demand as represented by vacancies did not make a final crossing to a position below supply as indicated by applications until the second week in November. This year the crossing took place in the second week of October, just one month earlier.

#### Weekly Employment Reports

During the year a system of weekly employment reports from representative employers of labor in all industries was

almost horizontal. During this period railway and other construction work, which bulks so largely in the industry of the west, was at its low level for the year, a fact which exerted a strong bearish influence on the curve of employment for Canada as a whole. With the advent of the usual spring expansion in out-of-door work the volume of employment grew rapidly until a peak was reached in the middle of July, when the number of employes on the pay-rolls was 9 per cent. greater than at the middle of January. The various curves show that this expansion was common to all parts of Canada, but very marked in the prairie provinces and British Columbia, where many thousands were drafted into railway and general construction. The curve for the maritime provinces, partly due to an unusual volume of construction work, was steepest of all.

The curve for the province of Ontario and Quebec closely parallels the curve for the whole country, due, of course, to the large proportion of the total industrial population within these two provinces. The recession from the peak in July is accounted for mainly by the numerous separations from industry and especially from construction work on the part of workers going to the harvest fields, a movement which appears in the curve for the prairie provinces and also in the curve for Ontario and Quebec. With the conclusion of the harvest the workers returned to industrial employment in large numbers, especially in the west, where the fine open fall favored railway and other construction. At the middle of November industrial workers in the prairie provinces were still very well

employed, but the employment curve for the country as a whole had dropped to the position it occupied on May 1. The curve for the maritime provinces was keeping up very well, but the curve for Ontario and Quebec was falling rapidly because of the slump in various manufacturing industries, chiefly clothing, boots and shoes, rubber, some branches of textiles, furniture, pianos, automobiles, confectionery and sugar refining. The rapid fall in the curve for British Columbia reflects shrinkage in railway construction, lumbering and logging operations and shipbuilding.

#### Trade Unions Also Report

Reports from trade unions as to the number of members unemployed are indicative of labor market trends for skilled workers in particular. Returns are received for the last day of each month from some 1,500 unions with a membership of approximately 200,000. As the accompanying chart shows unemployment among trade unionists fell to an almost irreducible minimum during the war—less than 1 per cent. in the summer of 1918. After the armistice the cessation of war industries, added to the unusual winter dullness, brought the trade union unemployment curve in February and March, 1919, to 5.6 per cent.—the highest percentage of unemployment reported since the winter of 1915-16. The usual spring expansion was somewhat retarded, but in the summer months only slightly over 2 per cent. of the members were reported unemployed. The curve mounted rapidly from the 1st of October to the 1st of December, when an unemployment percentage of 5 was registered, but it dropped to 4 per cent. in January and February, 1920. Not only was the unemployment curve lower than in the previous winter, but improvement began earlier, and in the months of March, April and May an unemployment percentage of about 3 was reported, as compared with considerably over 4 in the spring of 1919. While there was more rapid recovery from winter slackness than in 1919, trade unionists were not as well employed in the summer as in the previous year, and at the end of August the curve registered an unemployment percentage of 4. There was some recovery in September, but by the end of October the curve had risen steeply to 5.7 per cent., which brings us into the high altitude attained in February and March, 1919, when demobilization combined with seasonal inactivity to force the curve sharply upwards. Unemployment among trade unionists in the clothing, boot and shoe and rubber industries in Ontario and Quebec, and in shipbuilding and lumbering in British Columbia, was chiefly responsible for the steepness of the curve. Slackness among the carpenters and joiners also contributed.

#### 1920 A Year of Wide Changes

The various indices of employment maintained by the employment service agree that 1920 was a year of early rise and rapid fall in the labor market. The year 1919 was weighted with the demobilization problem and it was midsummer before industry seemed to get under way. As if to compensate for this tardiness the demand for labor continued brisk into the late autumn and at the end of the year there was no heavy surplus. The year 1920 accepted this heritage blithely and gave promise of a twelve-month of activity. The winter dullness passed off quickly. The number of ex-service men registered for the federal emergency appropriation was much smaller than had been expected. The percentage of trade union members unemployed averaged only 3.5 for the first four months of the year as compared with 5 per cent. in the first four months of 1919. Demand for labor at the employment offices began to exceed the supply about the 1st of April, two months earlier than in the year previous. Reports from employers indicated expansion in the volume of employment beginning early in April and reaching a peak in July; and building permits in 35 cities, which have not been discussed because of lack of space, registered their largest monthly total of the year in April, \$15,333,183, as compared with a record of \$11,995,683 for 1919, which was not recorded until September. But the year 1920 was riding for a fall. In July the curve of unemployed trade unionists registered a higher percentage than in the previous year and in each month following it has exceeded the 1919 mark. A surplus

of labor began to appear in the autumn, and applications for work at the employment offices rose to a position above vacancies offered by employers the second week of October, a month earlier than last year. The employers' weekly reports show that despite buoyancy in the prairie provinces the volume of employment for the whole country has been shrinking steadily since the last week in September, and in that month the value of building permits fell below the figures for 1920, and has so remained. The number of unplaced applicants on the registers of employment offices is steadily increasing while the number of unfiled vacancies has been declining at the same rate.

It is now abundantly evident that 1919 was only the first phase of readjustment from war to peace. Since midsummer there has been much business unsettlement and many industries have been reducing staffs. To this unemployment will be added that consequent upon seasonal inactivity, and we must expect a volume of unemployment greater than that of the winter of 1915-16.

#### BRITISH EMIGRATION TO CANADA RESUMED

Figures Show Big Increase During 1920—Movement From United States Keeps Up

IMMIGRATION to Canada in 1920 was substantially in excess of 1919, as the figures on page 22 show. In the fiscal year ended March 31 last 117,336 came to Canada, of which 59,603 were British, while for the previous year the figures were 57,702 and 9,914 respectively. During the seven months ended October 31, 1920, 109,856 came to Canada, 60,370 being British, 34,708 from the United States, and 14,778 from other countries.

#### Falling Off in Autumn

In commenting on the movement, W. D. Scott, Dominion superintendent of immigration, said to *The Monetary Times*:

"It will be noticed that immigration to Canada during the seven months ended October 31st of this year shows an increase of 32 per cent. For the last three months of the period, however, as compared with the corresponding months of the preceding year, the increase is quite small. In view of the fact that an order-in-council of recent date, fixing the money qualification for adult males at \$250, for adult females at \$125, and for children at \$50 each, the same to become effective at border ports on the 15th inst., and at ocean ports on the 1st prox., it may perhaps be concluded that for the five months, November to March, the number of immigrant arrivals may not be expected to show any increase over the corresponding months of 1919-20. If no falling off results the figures for the fiscal year 1920-21 will be approximately 144,000, or about 23 per cent. increase as compared with that of 1919-20."

#### Movement from Across Border

In recent years the number of immigrants coming to Canada from the United States has been greater than the number moving in the opposite direction. A report of the United States commissioner of immigration for the six months ended June 30, 1920, says: "In the movement of United States citizens to and from Canada, the balance is in favor of the latter, for during the past ten years nearly 562,000 have gone there and about 367,000 have come to the United States."

Figures showing the movement of immigrants between the two countries show 329,316 going from Canada to the United States in the five-year period 1910-1914, and 605,498 from the United States to Canada in the same time. In the period 1915-16-17 289,165 persons left Canada for the United States, while 158,105 came to Canada from the United States.

United States immigration officials say this was largely due to the fact that the United States had not entered the war at that time and there was unusual prosperity in that country. Many former Americans were returning from Canada to work in factories because of the higher wages offered. In 1918 and 1919, with the United States in the war, the situation was getting back to normal.

# 1920 a Record Year in Canadian Trade

Total Exceeds 1917 Figures—Adverse Balance Probably \$85,000,000—Imports Increased By Over \$400,000,000, While Exports Stationary — Foreign Trade Showing Good in Face of Changing Conditions—Exchange and Its Effects

By W. G. CATES

CANADA established a new trade record in 1920. The official figures for the year are not yet available, but one is warranted in saying that the value of the total external trade is approximately \$2,635,000,000. Until now the year 1917 with \$2,599,499,000 held the palm; but this has been beaten by nearly \$40,000,000, while the figures for 1918, the year in which Canada was sending immense quantities of food and munitions to Europe, have been left behind to the extent of nearly \$450,000,000. Canada did about \$300,000,000 more trade with the United States than she did in 1919; about \$40,000,000 less with the United Kingdom, and probably \$170,000,000 more with other countries.

The value of the exports is approximately \$1,275,000,000 and that of the imports approximately \$1,360,000,000, leaving an excess of imports amounting to probably \$85,000,000. How-

might lead one to conclude. Though the figures for exports are lower, they are nearly equal to 55 per cent. of the net national debt. That they are lower than those for 1919 is due merely to the marked decline in grain prices during recent months. Canada has 100,000,000 bushels more of wheat this year than last for export, which means possibly \$170,000,000 more in exportable values; and in the next few months it will swell the export figures. So while returns for exports may lower the potential value of this department of the nation's trade is much higher than it was in either 1919 or 1918, and that in spite of lower prices. It is furthermore to be taken into account that the decline has been in foreign produce, so that the exports of Canadian produce have remained nearly stationary.

Much has been said about the decline in exports, but the real gains made by exports should rather have commanded attention. During the twelve months the value of commodities exported exceeded by \$100,000,000 the value of all munitions exported during the four years of war. It was also equal to three-fourths of the national war expenditure. That a new record was not established is easily explained. During the year, owing chiefly to the rate of exchange and to the further fact that many of the countries of Europe are now drawing from other sources commodities formerly taken from Canada, exports to the United Kingdom and France fell off to the extent of probably \$200,000,000 during the year, of which possibly \$170,000,000 is represented by reduced exports to the United Kingdom. Among other things there was a loss of \$100,000,000 in munitions.

## Strong Spots in Export Figures

This has been partially made up for by an increase of nearly \$100,000,000 in exports to the United States. That, taking into account this serious loss of exports to Europe and the decline in prices, the exports are so nearly equal to those of last year, while much greater quantities of grain at good prices remain to go out, is strong proof that, all things considered, the export trade of Canada is in a satisfactory condition.

In passing a word should be said on the recuperative powers of the export trade manifested during the last two years. In 1917 the exports of cartridges and other explosives were valued at \$435,000,000; in 1918 they were \$273,000,000; even in 1919 they exceeded \$100,000,000; but in 1920 they dropped to less than \$2,500,000. Notwithstanding this serious loss the industries of the Dominion, engaged solely in peace-time production, last year turned out for export a volume of commodities much exceeding in value that of 1918, when Europe was paying Canada famine prices for almost any product. For this recovery credit is due chiefly to the agricultural and to the pulp and paper and lumber industries. The pulp and paper exports for the year are estimated at \$175,000,000, as compared with \$70,661,000 in 1918, and \$86,996,371 in 1919. Indeed, the progress made by this industry, reads like a fairy tale and merits special attention.

In the fiscal year 1913 the value of pulp and paper exports was \$11,837,344. The advance to \$58,753,906 for the calendar year 1917, and to \$86,966,371 in 1919 was surprising, but it remained for 1920 to give a remarkable demonstration of growth. In April the value of these exports was \$8,172,356, but in September it had jumped to \$18,224,356; that is to say, the value increased by 120 per cent. in six months. In September alone the value of pulp and paper exported was within \$800,000 of that for the whole of the fiscal year 1914. It is said on good authority that last year Canada produced 75,000 tons more of pulp and paper than Norway, Sweden and Finland combined.

ever, there is this to be taken into account: Canada has large quantities of food to sell, and as other countries need these, exports should at least equal if not exceed imports on the whole fiscal year.

## Per Capita Trade Very High

It is worth noting that the total trade for the year exceeds the net national debt by probably \$400,000,000; it is over two and one-third times greater than it was for the best year before the war, and is equal to about \$300 per capita. What this really means is more clearly realized when compared with the per capita trade of the United States, which for 1920, according to the best available figures, amounts to \$132. In point of turnover there is every reason to be satisfied with 1920, for in no other calendar year has Canada done as large a per capita trade. It should also be borne in mind that these huge figures were rolled up in spite of rapidly declining prices.

## Exports Have Fallen Off

While the total figures are thus much larger than ever before, it is regrettable that the exports show a slight decline, for they amount to approximately \$1,275,000,000, as compared with \$1,294,830,372 in 1919, and \$1,243,727,769 in 1918. But the situation is not as unfavorable as the comparative figures

Moreover, this is a permanent industry insofar as the present generation of Canadians is concerned. This remarkable demonstration of recuperative power when many good judges expected a collapse imparts confidence for the future.

**Exchange Affects Trade Figures**

Paradoxical as the statement may seem to be, it is nevertheless true, that insofar as exports to the United States are concerned their real value to the country is not disclosed by the trade returns, for while they were nominally valued at probably \$600,000,000, the rate of New York funds, which ranged at 12 per cent. during the year, increased the returns to the Canadian exporters by approximately \$70,000,000—that is to say, these exports were really worth over \$670,000,000 to the country. On the other hand, imports from the United States are not always increased in value by an amount equal to the rate of exchange, for it must be remembered that in order to hold their trade a very large number of American firms divide the premium with their Canadian customers, while some, indeed, bear it entirely.

In comparing the export trade of 1920 with that of 1919 and 1918 it must also be taken into account that only a small portion of the business done during the year just closed was obtained through government credits, or through long advances made by the banks, but rather on such terms as are usually granted in the ordinary run of commercial transactions. But not so the business of 1918 and 1919, a large part of which was secured through liberal government credits, for during the war period the aggregate advances extended to allied governments probably reached \$1,100,000,000, to which should be added bank credits exceeding \$200,000,000.

Compared with that of the United States the export trade of Canada during 1920 was very creditable. The exports of the great republic for the year are estimated at \$8,000,000,000, a new high record. But this is only \$75 per capita, whereas Canada's exports were probably \$140 per capita. In other words, the per capita export trade of this country during 1920 was 85 per cent. greater than that of the United States. Be it also remembered that this huge American export trade is sustained by nearly \$4,000,000,000 of private credits. Had such credits been at the disposal of Canadian trade 1920 would have left all previous export figures far behind.

**Large Increase in Imports**

Imports took a long leap forward during the year, being valued at approximately \$1,360,000,000, an increase of approximately \$420,000,000 over the preceding year, and nearly \$450,000,000 over 1918. In 1920 the imports were at the rate of \$115,000,000 a month, whereas in 1919 the rate was but \$104,557,000, and in 1918 \$76,000,000. The increase may be attributed chiefly to the removal of the 7½ per cent. customs war tax and to the practice of valuing imports from countries, whose currency as compared with the Canadian dollar is depreciated, at the current rate of exchange. The imports from the United States were approximately \$930,000,000, or at the rate of about \$78,000,000 a month. This means that Canada imported \$200,000,000 more of commodities from the republic than she did in 1919. Imports from the United Kingdom show the largest percentage of increase, 110 per cent., though the increase in dollars is but a little over \$150,000,000, the figures being \$240,000,000, as compared with \$87,651,725.

As an evidence of not only the value, but of the rapid growth of trade with the United States, it may be pointed out that the increase alone in imports during 1920 was within about \$40,000,000 of the value of all imports from the United Kingdom. This was piled up in spite of the rate of exchange, which operates to retard purchases from the Republic, while at the same time it stimulates imports from the United Kingdom. During the year the value of imports from the United States was probably equal to the value of all imports from all countries in any previous calendar year. Ten years ago the imports from all countries were only valued at \$370,000,000. That, in spite of the obstacle, these imports increase so rapidly is due undoubtedly to the fact that Canada is now drawing new capital almost entirely from the United States, a large portion

of which necessarily enters in the form of imports, and to stronger efforts in both countries to promote international, financial and commercial relations.

**Influence of Exchange Rates**

The influence of the rate of exchange on export trade was more marked during the year than ever before. Among other things it has made the United States Canada's best customer, the United Kingdom having taken second place. Canada had so increased her exports to Europe during the war period and her name stood so high among the nations of that continent that prospects for the continuance of this trade seemed very bright, and confident predictions were made by some of the best-informed over the importance of this new trade outlet. But in general these predictions were made without due regard to the influence of exchange after the pegs had been removed from sterling in New York. During the past year the effect has been most apparent. As has already been noted, exports to the United Kingdom and the continent of Europe declined to the extent of over \$200,000,000. The reason is obvious, for with sterling at a discount ranging from 10 to 20 per cent. in Canada, and with the currencies of other countries in Europe subjected to an even greater discount, they cannot afford to buy here any more than is absolutely necessary.

On the other hand, the rate of exchange which has reduced exports to these countries has strongly stimulated them to the United States, the gain having been equal probably to at least \$100,000,000 during the year. So that much of what has been lost in trade with Europe has been regained with the Republic. While possibly 30,000,000 bushels of wheat were exported to the United States, which may be attributed almost solely to the absence of a strong direct demand from the United Kingdom, the increase was due largely to the heavy demand for pulp, paper and lumber, and the higher prices which these products commanded over other years. It is undoubtedly true, however, that the whole range of commodities that could be sent south was strongly affected by the premium on New York funds, which made the American market by far the most profitable of any outside of the country.

The change of direction taken by so large a portion of Canada's export trade is of major importance. Only four times since 1873 has this occurred, namely, in the fiscal years 1882, 1888 and 1889, and during the last calendar year. In the years immediately preceding the outbreak of war the United Kingdom was taking from \$30,000,000 to \$60,000,000 worth of commodities more than from the United States. In 1915-16 this excess was \$250,000,000; in 1916-17 it was \$465,000,000; in 1917-18 it was \$421,000,000, and in 1918-19 it had dropped to \$83,000,000, and in the calendar year 1919 to \$46,000,000.

# Political Leaders Discuss National Issues

**Tariff is Main Subject Dealt With in Western Towns—Premier Meighen Upholds Present Tariff—Mackenzie King, Liberal Leader, Advocates Retrenchment—T. A. Crerar, Progressive Leader, Stands For Tariff Reduction**

Hon. Arthur Meighen, premier of Canada, and leader of the National Liberal and Conservative party, which succeeded the Unionist party in July last, in a speech at Winnipeg on October 25, at the commencement of a tour of Western Canada:—

"There must be," said Premier Meighen, "such a tariff as will make it pay Canadian industries to remain in Canada, and make it pay industries to grow and make good within this country. Up to that point, and not beyond that point, the tariff in Canada on any class of goods should go. I ask the people of Winnipeg, if you first of all decide that you must take account of the needs of industry and the need of keeping them in this country, can you possibly adopt a more restricted principle than that? We do not intend to go further. There is no value whatever in a tariff that does less. I did not see how to find out what is necessary except by the most careful and thorough enquiry that can be made. That is the course the government is pursuing, and before the electors in this country are asked to decide between our course and the vagaries of our various oppositions they will have a definite tariff from us in black and white. By the principle I have defined, by the limits I have clearly set out, that tariff will be constructed.

"If I am asked whether it will be possible to have a lower scale than prevails to-day or not, I say that must await the completion of the investigation. For myself, I would hope that in the final result it would be found not to be higher, and perhaps lower, than it is now; but I believe the interest of Canadians of every class require that Canadian industries remain Canadian industries, and that Canadian industries, not American industries grow with the growth of Canada.

"The authority of Parliament over its executive is just as complete, just as final, just as supreme at this hour and has been at every moment of the last six years, as it ever has been in the history of Canada or any country on earth. There has never been a single day when Parliament could not, by a majority vote, have voted the government from office or forced it to a general election."

The premier then proceeded to deal with the tariff. There were only the tariff principles, he said—protective and free trade. "I believe the protective principle can be abused," he said. "I certainly believe it can be too high. I believe it has been abused. I believe in places and at times it has been too high, but I don't believe it can be abolished. There are many who believe that there is little, if anything, to be lost and very much to be gained by practically a prohibitive tariff. With that opinion the government of Canada holds no sympathy, and against the prevalence of that opinion it will stand just as firmly as against the prevalence of the opposite opinion, the theory of free trade. If we abandon the principle of protection we will pay a sure and heavy penalty and every class will share in the calamity. We do not intend any system of shutting out imports. We must hold the level of our tariff down to the minimum that will maintain fair but active competition with industries outside.

"The big task of the next few years is the development of the resources of Canada. Constructive plans that bring real results in the development of our resources must be thought out and got under way, and policies consistent with these plans must be pursued. Do not let the west of this country get the idea that the east must remain the business centre or even the manufacturing centre of this Dominion. A territory that has the coal and the ore and the mineral wealth of Western Canada is bound to become a great industrial land."

Hon. W. L. Mackenzie King, leader of the Liberal party in the House of Commons, in a speech at Brandon on November 6:—

"The real issue to-day is the big interests versus the classes that represent the masses of the people," stated the Hon. Mackenzie King. The parties against the present government are not united, and this is the strength of the present party in power. "I have no opposition to any group in Canada, but I come here to state that I am standing for a party of progress, which will influence and add strength to any body for progress. The time has come when those standing for progress should co-operate, so that when the fight does come we can stand united against the big interests."

"The greatest problem to-day is the cost of living, and there is not a person in Canada to-day who is not affected by it," stated the speaker. The duty of the government is to seek some solution for the high cost of living, but up until the present time they have done nothing. Three great policies have been outlined in the Liberal platform, and briefly Mr. King outlined them as (1) retrenchment of public expenditures, (2) a revision of the tariff downward, and (3) the elimination of profiteering.

Dealing with the first policy, the opposition leader told of the immense amount of money Canada had to pay each year as interest on its national debt, of the huge expenditures that arose out of the war and have to be met, and the expense of carrying on the government of the country. The only solution, said Mr. King, to a more economical method of handling the finances of the country is in a complete change of administration. Until we get a Parliament representative of the people we will never get anywhere.

With regard to the tariff, the speaker said that the Liberals had laid down their policy in their platform of last August, and by that policy the Liberal party would stand or fall. He then read the tariff policy of the party showing the revision to be sought, and said that it was a tariff in the interests of both the producers and the consumers. The purpose of the custom duties was for the purpose of revenue only, and the Liberals naturally seek freer trade. The point is that the necessities of life should be as free as possible so that the masses of the people can get as great quantities as they want. The cost of living can only be reduced by increased production. The war has destroyed wealth, and now we must make more wealth.

Hon. T. A. Crerar, leader of the Progressive party in Canada, in a speech at Prince Albert, Sask., on November 4:—

As to the tariff, Mr. Crerar urged more attention to the development of the basic industries rather than artificial stimulation for industries asking protection. The tariff commission had gathered a mass of contradictory evidence, and the Progressive leader advocated that any industry needing protection should place its claims in the open before a committee of the House of Commons. He cited Great Britain's recovery after the war as an instance of what free trade had done, as compared with such protectionist countries as Germany, France and Italy.

Canada had many problems before the war, said Mr. Crerar, but the war had magnified and intensified these problems. For instance, before the war the public debt was \$333,000,000—now it is \$2,250,000,000. Yet nobody in Canada begrudged that increase. There was also the great problem of taxation. History showed that it was not the amount of taxation, but the manner of imposing taxation, which counted.

Some criticism had been directed against the farmers' organization. The declarations of political principles laid down by the farmers before the people were not the product of a few men, but were produced by great conventions in many provinces, and in succeeding years. Yet this platform was criticized as a class policy. This criticism came from those who were interested in keeping the common people down to the level they had been heretofore.

# Canadian Government and Municipal Bonds

possess all the elements that go to make an attractive investment. The principal is secured by safeguards of the highest type. Interest is promptly paid and conveniently collected and these bonds will be found to be amongst the most readily saleable of all securities should occasion demand immediate cash.

We deal exclusively in bonds of this nature, and our facilities for buying and selling such securities, as well as our experience in selecting the bonds best suited to individual requirements, is gladly placed at your disposal.

Consult us about your investment problems.

# Provincial Premiers Write of 1920 and Outlook

Opinions Expressed are Optimistic of Recovery from Present Period of Depression—  
Turning Point Has Been Safely Passed—Review of Year's Developments in the Provinces

**NOVA SCOTIA**

Nova Scotia

By  
Honorable  
**G. H. MURRAY,**  
Premier.

**NEW BRUNSWICK**

New Brunswick

By  
Honorable  
**W. E. FOSTER,**  
Premier

NO other portion of Canada is more prosperous to-day than the Province of Nova Scotia. The farmers were blest during 1920 with bountiful crops, which were harvested in excellent condition. The apple production was exceeded by only two other apple crops in the history of the Nova Scotia fruit industry, and the output of creamery butter shows a gratifying increase. While prices have declined in sympathy with world-wide conditions, the end of the year finds our farmers with a balance on the right side of the ledger.

The output of coal during the past year reached approximately 5,700,000 tons, as compared with 5,004,757 tons in 1919, an increase of about 14 per cent. Sales amounted to 5,082,230 tons, as against 4,459,647 tons in the previous year, an increase also of very nearly 14 per cent. The coal industry of Nova Scotia is now on a basis that will support a largely increased production as soon as conditions will warrant such development.

In the lumber industry weather conditions were ideal for operations. The total production was 350 million feet, which is valued at \$12,250,000. The cut exceeded normal by about 50 million feet. Of the total cut about 90 per cent. has been sold, and about 60 per cent. shipped, leaving about 40 per cent. on hand. It is estimated that of the supplies disposed of, 25 per cent. were consumed locally, 10 per cent. went to Upper Canada, 30 per cent. to the United States, 25 per cent. to the United Kingdom, and the remainder to the West Indies, South America and Newfoundland.

The deep-sea fishing fleets had a successful year, while the production of the shore fisheries, with the exception of lobsters, was under the average. All the branches of the industry—fresh, salt and smoked—have been carried on in about the same volume as during the preceding year, but at a lower range of prices. The industry, in general, is suffering from a forced curtailment of buying due to the financial situation. It is confidently expected, however, that conditions will improve in this industry as soon as the accumulated stocks on hand will be cleared off.

To sum up, owing to the flourishing condition of two of our leading industries, farming and coal mining, and the very fair condition of the steel and other industries, it may be truthfully stated that Nova Scotia has again earned the right to be classed among those countries where a certain buoyancy of trade is maintained by virtue of the variety of its resources.

*G. H. Murray*

NEW BRUNSWICK has not been simply marking time in 1920. All classes of people have realized the importance of gaining a fresh and firm foothold on business and trade after the uncertainties that prevailed during and immediately after the war period.

The greatest industry, lumbering, was followed with great energy. Enhanced prices in the later months of 1919 and the spring of 1920 resulted in increased production of lumber and pulpwood. Wages were high and costs advanced proportionately. Falling prices in later months have given warnings which are being wisely heeded.

Employment is not so plentiful as it was. The cessation of road work, in which the Province has spent liberally, has diverted such labor to other channels. Manufacturing industries are slacking up and further diversion will be necessary.

Agricultural production was satisfactory and the prices fairly good. Lower prices mean greater efforts on the part of those engaged in this industry, and this, no doubt, will be as true in the future as in the past.

In spite of these drawbacks, due to the falling prices the world over and reconstruction efforts, there is a feeling of great confidence in New Brunswick. The Government, of which I am the Prime Minister, is aiding the development of the water powers and assisting wherever possible to advance the interest and prosperity of the people. Teachers' salaries have advanced and the profession is encouraged to carry on with vigor and efficiency. Our bonds are selling as high as those of any Province in Canada. Improvement in the people's means of transportation, the highways, has been very great. We are entering 1921 with courage, hope and faith in our people and Province, confident that progress and prosperity await our united efforts.

*W. E. Foster*

**T**HROUGH the wheels of some of the principal industries have slackened within the past month or two, a comprehensive view shows that the year to date has been on the whole one of prosperity for British Columbia.

The great lumbering industry promises a good average for the year, though at present trade is quiet. Logs scaled during the first nine months of 1920 totalled 1,400,000,000 feet as against 1,438,000,000 for the whole of 1919. The domestic lumber market is at present very quiet, largely owing to the advance in freight rates of September 15th last, which discriminated against Coast shippers to the east. The advance, being on a percentage basis, favored the southern pine operators with their shorter haul to the eastern market. Export shipments overseas for the year show some increase, with 88,380,299 board feet for the first nine months as against 72,310,130 for the same period last year. Financial conditions in Australia, China and Japan have retarded recent business to those points.

The pulp and paper trade continues to gain steadily, and last year's total output of 123,000 tons of newsprint should be surpassed. The demand for pulp and paper, and the depletion of eastern pulp wood stands has turned the attention of eastern manufacturers to the timber stands and water powers of British Columbia. Several new pulp companies have been incorporated and will be operating as soon as plants can be established.

The mining industry shows satisfactory returns, though there is naturally considerable falling off after the abnormal activity of the war period. Such developments, however, as that of the Canada Copper Company near Princeton, and others in the Portland Canal district, promise well for the future.

In the fisheries the province still holds a premier place in the Dominion. Last year the value of the British Columbia catch was estimated at 45 per cent. of that of the whole of Canada. This year, owing to the lower prices for the inferior grades of salmon, it will probably be smaller.

The government has been overhauling and rehabilitating existing irrigation systems, and in the Southern Okanagan valley is inaugurating a new system which should bring about 7,000 acres under cultivation. All this should add materially to the future productiveness of the province.

A survey of the industries of the province as a whole shows satisfactory progress for the present year, and promises well for the future. British Columbia does not carry all its eggs in one basket or all its wealth in one valley, and out of its varied industries of lumbering, mining, farming and fishing, is gradually accumulating a basis of substantial wealth.

*John Oliver*

**I**T is a great pleasure to be called upon to write about Saskatchewan at this particular moment, in view of the fact that, notwithstanding post-war conditions and disappointing crops, we have never been more justified in looking forward with confidence to Saskatchewan's future, and in this remark I am sure I can include the whole prairie country.

The budget recently presented to the Legislature by my able colleague, Mr. C. A. Dunning, showed an excess of receipts over expenditure of \$1,934,625, and a net cash surplus of \$1,801,095. In view of this surplus the Supplementary Revenue Tax has been abolished. This tax was first levied thirteen years ago, and consisted of a levy of one cent per acre, one of its objects being to compel speculating owners of unused lands to contribute to the educational needs of the country. Since then all taxes based on acreage alone have been replaced by an assessment on value. The last remaining vestige of acreage taxation was the Supplementary Tax. Of the proceeds of this tax 80 per cent. went to rural schools, 5 per cent. to the Agricultural College, 5 per cent. to the Saskatchewan University and 10 per cent. to secondary education.

The public debt of the Province is on a satisfactory footing. In a new Province the initial development expenses were necessarily heavy. Large expenditures were absolutely necessary in public buildings, roads and bridges, and for the due support of education. The gross debt stands at \$41,549,480. It is made up of two different kinds of indebtedness, a dead-weight debt which has to be paid off from the revenue derived from taxation, and a debt incurred for revenue-producing utilities. This latter class of indebtedness takes care of itself, the revenue-producing utilities paying their own way, and from the point of view of being a burden to the State, it may be ruled out of consideration. The dead-weight debt of the Province stood at \$19,416,237, a relatively small amount. Without going into further detail I think I have said sufficient to indicate that the financial position of the Province is satisfactory; but I may add one other point which was brought out in Mr. Dunning's budget speech, and that is that Saskatchewan can borrow money as advantageously as Ontario, the wealthiest Province in Canada. There is a third liability, but it is a contingent one, of \$28,582,011, resulting from the Government guaranteeing C.N.R. and G.T.P. branch line bonds, but there is little likelihood of the Province being called upon to make the contingency good. There are some other contingent liabilities on account of the Saskatchewan co-operative creameries, municipal hail insurance, seed grain and drainage schemes, relief extended under special circumstances to municipalities, and so on, but these are not sufficient to affect the general situation very much, as the prospects of repayment are excellent.

*W. M. Martin*

**I**N its agricultural industry Manitoba has had still another very satisfactory year, the yield of wheat over the whole province being above the average of the past ten years, while the coarser grains were proportionately good. Isolated districts suffered somewhat from summer drought, but on the whole, the year 1920 gives renewed confirmation to the declaration that "Manitoba is the Sure Crop Province." Many years have passed since this province has had anything in the nature of a serious crop failure, and the possibility of such a visitation is steadily growing less as our farmers continue to adopt proved methods in diversified agriculture. At the moment our farmers are suffering from the fact that while the cost of production was at its peak during the year, the price of their product has been among the first to be affected in the readjustment that is now well under way. This, however, does not affect the fact that Manitoba farms are just as productive as ever, and that Manitoba farmers are constantly improving their methods.

Conditions in the industries based on other natural resources of the province have been normal. The annual output of our lake and river fisheries stimulated during the war by the scarcity and high prices of beef, has remained above pre-war figures, and will, undoubtedly, hold its present place. Opening of transportation to the valuable fishing grounds in our northern lakes will further increase the annual yield. Lumbering, never a very large industry in Manitoba, shows a satisfactory increase, while our large tracts of pulpwood remain as yet untouched; they await the opening up of our far northern stretches with their natural riches such as can only be guessed until they have been properly prospected. Mining in northern Manitoba is now apparently on the very eve of the long-expected development.

During the past five years there has been a large expenditure for good roads, extension of the telephone service and completion of the new legislative buildings of the province. By careful management the financial position of the province has been strengthened, and the credit of the province has been retained at high levels. The government has safeguarded zealously, not alone the credit of the province, but the credit of the municipalities and the school districts as well, with results that speak for themselves. During 1920 there was established the Provincial Savings Institution, the people of the province being invited to deposit their savings with the government. A beginning has thus been made towards securing eventually within the bounds of the province itself the money for capital requirements. In this connection it must be noted that the people of Manitoba feel that the justification of the claim of the province for control of its minerals, timber, water powers, fisheries and other natural resources should be recognized and established.

*T. C. Norris*

**S**EEDING opened later than usual, but under very favorable conditions. During the fall of 1919 and the winter and spring of 1920, a generous supply of moisture saturated the soil, producing excellent seeding conditions. As usual, seeding began first in Southern Alberta and went forward more rapidly than in the north, where heavy rains in the last half of May delayed seeding to a point that made farmers anxious for a time. The lateness of the season, however, was soon compensated for by a rapid growth. The seed quickly rooted and grew with great luxuriance, owing to steady heat and moisture throughout the summer.

One of the most satisfactory features of the season was the phenomenal growth of grass. The scarcity of feed in a large portion of the province during the winter induced the farmers who had large supplies of feed (especially in Central and Northern Alberta) to sell below their normal needs. Coupled with the lateness of the spring, this feature in the general situation caused our farmers many anxious days, but with the beginning of the grass the country quickly recovered and the feed famine was forgotten in a few weeks. The universal expression of satisfaction by all livestock men was "How Alberta can come back."

The scarcity of feed and the cost of tractor supplies increased the cost of seeding operations and limited the acreage of wheat. Successful efforts were made, however, to increase the acreage of feed grains. The favorable ripening season which continued into October resulted in a most bountiful harvest of oats and barley. It is regrettable, however, that the farmer has not benefited by the increased production. By the time his crop was ready for market, prices had so declined that he has had an inadequate reward for a year of anxious and costly toil. He is left wondering why the price of his commodities has so rapidly declined while those he is forced to buy (though they contain many raw materials produced on the farm) still cling to unapproachable levels.

Such a situation is not very encouraging to increased production for the coming year. Alberta farmers, however, are not dispirited. More fall plowing has been done and more land is ready for seeding next spring than for several years past. As an evidence of the unbreakable faith Alberta farmers put in their province, it is refreshing to cite the pledges of the farmers of the Lethbridge Northern Irrigation District to bond their land for irrigation works by a vote of 278 to 16.

The year has been a successful one in the coal mining industry. The market for Alberta coal is widening and increasing. Shipments are going east to Ontario points and west to the Pacific coast. Production up to the end of November was 6,750,000 tons and it is estimated production will pass the 7,000,000 mark by the end of the year. It is the largest on record.

The ordinary statistics of bank clearings, post office and customs returns and building returns indicate a satisfactory

increase except in the building returns. In the two principal cities buildings erected this year total \$6,000,000. Still housing is scarce. The high building costs and the fear that lurks in the minds of those who formerly invested in home building property, that city taxes will wipe out all profits no matter how high rents go, is causing a slump in the number of houses available for a steadily increasing population. On the other hand, there are evidences of increased interest on the part of investors in the natural resources of the country. The number of application to the Provincial Utilities' Commission doubled in 1920 over the number in 1919. A number of joint stock companies that were quiescent during the war are now applying to be placed on the register. Many new companies are being organized and 400 certificates of incorporation have been issued during the year.

There has been an increase in the commercial and manufacturing industries in the past year. Many new firms have been added to the business directories of our cities. There have been extensions of plant and improvements in equipment of many of the old-established houses. It is a sign the province is becoming more self-sustaining every year. Conditions seem to be moving to a steady readjustment from those prevailing immediately after the close of the war. There is no doubt costs are falling, that there is a growing surplus of labor that is leading to the survival of the fittest on the job. Business men and employers seem to be anxious to get back to a basis of steadier and better production, and hope by reducing the cost of production to be able to promote increased consumption by all classes, instead of by those who were fortunate during the war.

*Chas Stewart*

WHILE moving in an orderly and progressive way in every sphere of human activity, the people of the province of Quebec have, in 1920, devoted their attention chiefly to agricultural development. Realizing that the world-shortage in food is threatening to bring about a fateful crisis and has become the most vital after-war problem, members of the government as well as our leading professional and business men were all agreed that everything must be done to help and increase agricultural production. Our farmers proved equal to the task laid upon them, and set about to make of Canada a self-contained nation as to food and supply some of the foodstuffs that must be provided for the millions dependent on the land.

The tiller of the soil was considered one of the pivots upon which the result of the great war turned; he appears to-day to be the axis upon which the destiny of European and American nations revolves. Since there is no larger sphere of duty to our country and to the world, the province

of Quebec may well take pride in the patriotic action of the farming communities.

Our province had in 1920 over 175,000 farmers at work, and the area under cultivation was considerably increased. In the remoter districts of Abitibi and Lake St. John hardy pioneers kept on gaining ground and laid under the plough thousands of acres of productive soil, which yielded in many places forty bushels of oats to the acre. The value of our crops this year was \$327,065,000 as compared with \$307,994,280 in 1919. The average yield of cereals per acre has been far superior to that of the previous year, and largely compensated for the small decrease in the yield of hay and corn caused by the drought at the beginning of the summer.

Although the Quebec farmer is more prosperous than he ever was, he remains the man of simple life, of frugal tastes, fond of his home, and still puts his pride in raising a large family. He is a healthy type of Canadian. In following up the best methods of agriculture that have been evolved, he is developing into a most effective worker of the land.

Thanks to her forest wealth, our province was also able during this year to answer a most pressing want. Our pulp and paper mills worked at their full capacity and many had to be enlarged. Statistics are not yet available to show the number of tons of pulp produced, but 1,000,000 tons should be a conservative figure. As to the total value of all the raw forest products for the year, it will amount to over \$45,000,000.

In the first six months of this year, our province exported 778,246 cords of pulpwood valued at \$9,556,255, and from April to September for \$103,949,481 worth of pulp and paper.

In order to assist the pulp mills and other mills, and to create new thriving manufacturing towns such as Grand'Mère and Shawinigan Falls, the government is following up its policy of developing the most useful water powers. A storage dam is being built on St. Anne River, and surveys are being made for developments on the Nottaway and Megiskan Rivers, and the Kenogami and St. John Lakes.

Our mineral production, which increased during the last ten years from \$7,000,000 to \$10,000,000, is steadily enhancing. Important discoveries of gold and molybdenite were recently made in the Abitibi which promise to make of this new region an important mining district.

While generous appropriations were made in favor of technical schools, and the erection of a score of rural academies was planned, this year has been especially devoted to the cause of higher education. The government has granted \$3,000,000 to be shared equally between McGill, Laval and Montreal Universities, and it has besides established many new European scholarships. Four young forestry engineers left this last month for a special course abroad.

As to our financial situation, the rule established in recent years still prevails and our budget shows a surplus which gradually reduces our debt now standing at a little less than \$12 per capita. Our debentures are consequently much sought after, as are all our municipal and corporation bonds. If banking may be considered a true barometer of provincial conditions, to tell the tale of our prosperity we need only refer to the great increase of deposits in 1920 and the opening of many new branches throughout our province by our leading banks.

While they had to bear the high cost of raw material and the sudden slump in retail prices, our manufacturers, however, have had a prosperous year.

Among other industries, shipbuilding is making great strides in our province, and Montreal is claiming international attention.

The sanity and level-headedness of our laboring class saved us from strikes and bolshevist tendencies such as have more or less handicapped other countries' industrial endeavors. This again should help solve the unemployment problem. With prices falling our laborers will understand that wages must follow suit, and fewer men and women will then have to be released.

L. A. TASCHEREAU.

# Provincial Legislation of the Year 1920

**Summary of the More Important Legislation Placed on the Statute Books During the Past Year—New Ontario Government Failed in Economy But Succeeded in Politics—Tendency to Raise Taxes on Accumulated Wealth is Evident From Increases in Succession Duties—Higher Taxes on Financial Institutions**

PROVINCIAL legislation affecting finance and industry during the past year is of considerable importance. The rapid expansion of the past few years required some changes of this kind. The tendency towards increased public expenditures made increased taxes also necessary. The new legislation of the year has a strongly social flavor, minimum wage, housing, mothers' pension and similar laws being very prominent. An effort was made to raise the money for these purposes by higher succession duties, on commercial and financial institutions, and on other forms of accumulated wealth. Experiments are also being made in the way of provincial assistance to new industries.

The time at which the legislatures met is indicated by the following dates:—

	Opened	Closed
British Columbia -----	Feb. 1	-----
Alberta -----	Feb. 15	April 10
Saskatchewan -----	Nov. 27, 1919	Feb. 7
Manitoba -----		
Ontario -----	Mar. 9	May 28
Quebec -----	Dec. 4, 1919	Feb. 14
Nova Scotia -----	Mar. 4	
New Brunswick -----	Mar. 11	April 24
Prince Edward Island -----		
Yukon -----		April 28

## Ontario Has Big Record

The Ontario session was of outstanding interest this year, as at the elections in the fall of 1919 the farmers had been returned as the strongest party, although they had to form a coalition with the small labor group to secure a majority in the house. The new party had been elected on a platform of economy, but like other new governments, it has found it impossible to carry out in power what it had advocated in opposition.

The large number of 260 acts were passed by the government house. The estimates were higher than ever before, and new taxes were as a result necessary. These took the form of increases in succession duties, in taxes on corporations, in taxes on race tracks, and on transfers of stock. The succession duties in the province now range from 15 to 60 per cent., which is exceptionally high. The taxes on banks were practically doubled, and those on loan companies substantially raised. The tax on race tracks is now \$7,500 per day for mile tracks and \$2,500 per day on half-mile tracks.

This increase in revenue was for additional expenditures for ordinary provincial purposes, including a good roads programme, of which the farmers were strongly in favor, and a mothers' pension act, which was passed largely through the efforts of the labor members. Provision was also made for the superannuation of civil servants. The influence of the labor section is also shown by the minimum wage acts and the amendment increasing the rate of workmen's compensation.

An extension of the Temiskaming and Northern Ontario Railway to James Bay was authorized, although construction will not be commenced for some time. The two big commissions in the province, which are the Hydro-Electric and the T. and N. O., have received strong support from the new government, although it has been keenly criticized for not authorizing the former to purchase the radial railways of the Dominion government without making an investigation first.

Another important bill passed at the last session of the Ontario house was that providing for local option in municipal taxation, by which improvements up to a certain amount may be exempted from taxation. In recognition of the changed financial conditions it was also enacted that provincial bonds might in future be issued bearing interest at more than 6 per cent.

The Quebec legislature dealt with the city of Montreal's charter, the housing question, the provincial public service commission, grants to railways, McGill University's finances, and a number of other financial questions. The amendment to Montreal's charter took the form of an act providing that there should be no election at the end of 1920, but that instead a commission should be appointed to frame a new form of government for the city. This commission was to be composed of sixteen members, representing various interests in the city. It is still working out a new plan of government for the city.

The new housing act dropped provincial control of housing, under an enactment of the 1919 legislature, but provided that the government should still make advances to municipalities for housing purposes, accepting as security their 5 per cent. bonds at par. Provision was made for flats as well as individual dwellings by making the loans applicable to tenements of three flats erected at a total cost of \$13,500.

The name of the Quebec Public Utilities Commission was changed to the "Quebec Public Service Commission," and some important changes were made in its powers. The sessional indemnities of members of the legislature were increased from \$1,500 to \$2,000. A new companies act was passed to take the place of the existing legislation regarding the incorporation and management of companies in the province. The "General Accountants' Association in the Province of Quebec" was incorporated, as was also a million-dollar company called the "Guarantee Title Bond and Trust Corporation of Canada." Amendments were also made to the charters of "La Prevoyance" Assurance Company, and of the Industrial Life Insurance Company.

## Saskatchewan Legislation

Legislation of the Saskatchewan government included a new seed grain act, amendments to the town act and to the rural municipality act, a new village act, the Saskatchewan Loans Act, a Sale of Shares Act, and an Attachment of Debts Act. A new and increased scale of succession duties was also put in force. An advisory board was created to assist the wild lands tax commissioners. The status of the provincial bureau of labor was enlarged to that of a provincial bureau of labor and industry, with power to investigate the possibilities for new industries and for extension of existing ones. Several measures in the way of development, affecting irrigation and water supply, were passed.

The Saskatchewan Loans Act authorized the borrowing of money in advance of the fiscal year, in order to take advantage of favorable financial conditions. The provincial moratorium was extended to February 1, 1921. Provision was made for financial assistance to co-operative enterprises, such as the Saskatchewan Co-operative Elevator Company and the Saskatchewan Creameries, Ltd.

## Other Provincial Legislation

The Manitoba legislature took up the question of assisting industry in the province, railway and other developments in the north, and the extension of the rural credits system in the province, which is now to be financed with the assistance of a Manitoba savings bank. Hail insurance also received attention and some changes were made in the law.

British Columbia authorized several new loans, and passed acts relating to the Pacific Great Eastern and several other railways. Efforts were also made to enable the municipalities to raise more revenue. A mother's pensions act was one of several pieces of social legislation placed on the statute books of the province.

The Yukon legislature at its 1920 session passed eleven acts, the most important being one prohibiting the sale of intoxicants for beverage purposes.

## CANADIAN BOOKS OF THE YEAR

Scarcely Any Deal Directly With Finance or Industry—  
Canadian Trade Index a Useful Directory—  
Many Books of Legal Character

OUTSIDE of law books having a close relation to industry, there were scarcely any books published during 1920 on Canadian economic subjects. In 1919, on the other hand, agriculture, the railroads, and several other branches, received considerable attention.

Probably the book of most importance to Canadian economic life was the Canadian Trade Index for 1920-21, which is really not a book at all, but rather a directory (Canadian Manufacturers' Association, Toronto, 882 pages, \$6). One of the valuable services rendered to manufacturers of Canada by the Canadian Manufacturers' Association is the publication of this complete reference list. The object of the index is to provide all buyers of Canadian manufactured goods, in whatever country they may be, with a dependable list of the articles made in Canada and the names of the manufacturers making them. In addition to the list, arranged alphabetically under the names of the products, this edition introduces two new features: A continuous alphabetical list of all manufacturers, whether members of the association or not; and a translation section in French and Spanish.

Every year sees a considerable number of law books published in Canada, some of them being closely related to economic affairs. About the end of 1919 there was one published which is of outstanding value. This was "Dominion Company Law," by Thomas Mulvey (Ontario Publishing Co., Ltd., Toronto, 889 pages, with index, \$12.50). The author, who is under-secretary of state for finance, and an authority on company law in this country, sets forth thoroughly the law as it affects companies incorporated under federal charter. His synopsis of the Dominion Companies Act, and of the practice thereunder, which occupies seventy-two pages of the book, will be particularly instructive to those not conversant with the subject, and will readily be understood by business men without legal training. The text of the Dominion Companies Act is set forth in full, and annotated, as are also the provisions relating to loan companies, British loan companies, and British and foreign mining companies. The Dominion Winding-up Act is treated in the same way, and then the licensing and taxation legislation in the various provinces is taken up, in so far as it affects companies with Dominion charters. Finally, the Income Tax Act and the War Profits Tax Act are given, and a list of forms to be used by companies. The book will be very useful, not only to corporation lawyers, but also to the officers of any company which operates under Dominion legislation.

Another was "Executors' Accounts," by C. H. Widdifield, judge of the Surrogate Court of Grey County, Ontario (The Carswell Co., Toronto, 531 pages, with index, \$6.50). This is the second edition of this book, but since the first was published considerable legislation has been passed altering the practice and procedure of the courts. Trust company officers will find the book exceedingly valuable, and a good index makes it convenient for reference.

Fraser's "Company Forms and Precedents" contains over 1,000 forms. Those relating to applications for registration or license under the Extra-Provincial Corporations Acts of the different provinces and to departmental applications are based on precedents which have been approved and accepted. A selection only of statutory and departmental forms has been included. These are subject to change from time to time, and are always available on application to the proper Dominion or provincial authorities (The Carswell Co., Ltd., Toronto, 699 pages, with index, \$10).

## Book on Railway Law

The passing of a new railway act at the 1919 session of parliament gave this country a new railway law, no less than sixteen previous acts being repealed, either in whole or in part. As a result of this change, "Concordance of the Railway Act," by A. H. O'Brien, M.A., has been published (Canada Law Book Co., Toronto, 184 pages, \$6). This volume is a new edition of "Currie's Concordance," and gives, in addition

to the text and a thorough index of the Railway Act, 1919, an index to all acts of parliament affecting railways, an account of the Board of Railway Commissioners and an index to its regulations and forms, and considerable other useful information.

A similar publication in the field of company finance was "Concordance of the Companies Act," by Leslie G. Bell. (Carswell Co., Toronto, 181 pages with index; \$5.) This book covers the Dominion Companies Act, the Business Profits War Tax Act, the Income War Tax Act, and provincial legislation applicable to Dominion companies. The increasing number of incorporations and the growth and importance of legislation governing such bodies make it a very useful work. The "Office Consolidation of the Companies Act," which comprises 88 pages of the book, is a thorough index to all subjects dealt with by the act.

## Manual on the Tariff

Another useful publication was "Canadian Customs and Excise Tariffs," by M. P. McGoldrick. (Chas. S. J. Phillips, 20 St. Nicholas St., Montreal. 504 pages; \$2.50.) This handbook shows the tariff on all classes of goods alphabetically arranged, and includes the Revenue Act of 1920. It also shows the articles subject to luxury tax and those exempt from sales tax, and the stamp tax legislation. Other features are a list of warehousing ports, outports, etc., in the Dominion; the trade conventions with Belgium, Netherlands, Japan, Italy and British West Indies; extracts from the Customs Act, specimen forms of customs, documents, foreign weights and measures with their Canadian equivalents; tables showing Canadian customs value of foreign currencies; conversion tables of sterling and francs into Canadian money; Montreal wharfage tariff and list of principal customs brokers in Canada.

## Currency Exchange Tables

A book entitled "Currency Exchange Tables" (G. B. Snell, c/o Bank of Montreal, Montreal, \$7.50) has been welcomed by the business houses of Canada as a timely aid for calculating the exchange on New York funds. The table gives the exchange on all amounts from \$100 to \$10,000, at all rates from  $\frac{1}{4}$  to 1 per cent., advancing by sixty-fourths and from  $1\frac{1}{2}$  to 10 per cent., advancing by five thirty-seconds. The exchange on larger or smaller amounts can be arrived at by simply moving the decimal point to the or left as required. The second edition, just issued, contains in addition a table showing the comparison between the premium on United States funds in Canada and the discount on Canadian funds in the United States.

"Daylight on the Money and Banking Questions," by R. C. Owens (Western Veteran Publishing Co., Edmonton, Alta. 47 pages; 25 cents), was a pamphlet making some radical proposals. The author believes that wealth is produced by labor alone. "It is a recognized fundamental fact of political economy that labor produces all wealth," he says. He accordingly deprecates the accumulation of wealth through interest, and urges radical changes in the money and banking system. His chief proposals are: That the government issue sufficient legal tender money for all needs, thereby abolishing credit and interest, and that banking be conducted by the government at cost; that a tax on land values be imposed; that the tariff be abolished; that natural resources be the property of the people; that public utilities be operated at cost; that six hours be a legal day's work; that each person over 55 years of age receive a pension; and that an income tax of from 50 per cent. to 100 per cent. be levied on all incomes from \$2,000 to \$1,000,000, until the public debt is paid.

General interest in the application of the Bankruptcy Act has led to the commencement of a special publication, to deal carefully and exhaustively with the development of the law under the act. The series is known as the Canadian Bankruptcy Reports, Annotated, published by Burroughs and Co., Ltd., of Calgary, Alta., and handled in eastern Canada by their eastern office, Burroughs and Co. (Eastern), Ltd., Witness Building, Montreal, Que.

# Review of Canadian Banking in 1920

**Tightening of Credit Was Most Prominent Feature—Failure of Deposits to Respond to Growth of Loans—Fewer Branches Opened than in 1919—Substantial Addition to Paid-up Capital and Reserves—Effect of Depreciated Currency on Banking**

By A. B. BARKER.

**D**URING the past year the banks have been reluctant to increase their commitments. The business of the country has been conducted for several years under a condition of steadily rising prices, necessitating the use of an increasing amount of credit to handle stocks of goods. These high prices have, it is believed, reached their peak, and from now on should recede. The executives of the banks at the various annual meetings have emphasized the necessity for great caution in view of the disturbed financial and political outlook everywhere. Throughout the year credit has been restricted, and loans for purposes other than commercial have been increasingly difficult to obtain. This was particularly noticeable in the early fall.

Even in normal times, owing to the general preparations for financing the western crops movement, the banks find it necessary to curtail anything in the nature of speculative advances, but this season the movement has been more pronounced. Formerly relief was obtainable from London in anticipation of grain exports, but this year, owing to the fall in sterling, the grain is not likely to go forward in the same quantities as before. This will throw an additional load on home funds, even with wheat at reduced prices. There will, in consequence, be heavy demands on the banks from western customers to enable them to carry the crop until it can be sold to better advantage.

This is a matter of vital interest to the rest of Canada, as unless the farmers can obtain adequate prices for their grain the purchasing power of the west will be greatly curtailed, with unpleasant effects on the rest of the country, as it means contraction of trade, which will in turn react on the flow of deposits, and without a steady increase of deposits bank credits cannot expand. A bank is a merchant in credit, buying it from depositors and selling it to the commercial community. If the supply is not sufficient the volume of sales must decrease.

## Smaller Deposits Anticipated

That some reduction in deposits is looked for by the banks the public statements of their responsible officers leave no doubt, and they are wisely setting their houses in order in preparation for this contingency. This condition is not confined to Canada; it is world-wide, and is due to the strain of readjustment after the war. The satisfactory feature is that the preparations to meet coming conditions have been steadily going on for months, as evidenced by the curtailment of credit, and, judging from past experience, the transition, because of these preparations, will be effected with the minimum of loss.

The government announced when the 1919 loan was issued that it would be the last loan of the kind and that future expenditure would be met by taxation. At the beginning of the year it was estimated that receipts would fall short of expenditure by some \$90,000,000. The new taxes, however, produced something like \$100,000,000 in excess of expectations, and a surplus is now confidently expected instead of the deficit. Borrowings by the government therefore have been merely the usual anticipations of revenue.

During the year two more Canadian banks have opened offices in London, England—the Merchants Bank and the Bank of Nova Scotia.

## New Developments in West

There have been no further amalgamations, but a new bank is understood to be in process of formation in the west. Nothing has been said of it lately, and it was reported that the promoters were waiting until after the harvest to canvass subscriptions. Much will doubtless depend on the returns re-

ceived by farmers for their wheat, and as this has lately fallen to below \$2 a bushel, the prospects of obtaining the subscriptions necessary to apply for a charter are none too favorable, this year at any rate.

Owing to its failure to induce the banks to make advances for farming purposes at less than market rates, the province of Manitoba has undertaken an experiment in finance which will be watched with interest by all, whether in sympathy with the plan or not. This is the taking of deposits from the public in order to finance loans to farmers. The object is one of the best, and while the plan has been criticized strongly there is no quarrel with the object sought. It is the plan itself to which objection is raised. The scheme provides for advances to farmers to mature not later than December 31st, and for one renewal for twelve months. This will make the average loan a fairly long-term one. Now, if the funds from which these loans are made, were obtained for this definite purpose and on similar terms, there would be small objection to the scheme, but when the funds are obtained from deposits payable on demand, the possibility of trouble is not far away. It is understood that the act permits advances by the province, but if the depositors want their money, the province can raise the funds only by borrowing, and in this case it will have to pay market rates. No lending scheme has ever succeeded when demand funds have been used for long-term investments, as numerous failures have shown, and it is a matter of regret that so worthy a scheme should be started on principles fundamentally unsound.

## Banks Not So Strongly Criticized

There has been much criticism of the banks for insisting on business principles when co-operating with the provinces, but there are unmistakable signs that many of the critics are beginning to realize that the Canadian banking system has really been the salvation of western Canada. An extract from a recent editorial in the Calgary Farm and Ranch Review, which has heretofore been most critical, is an evidence of this:—

### "A CHANGE OF HEART"

"Confession is good for the soul, and here is where I take advantage of it. I have thought and said a good many harsh things about our banks and banking system generally during past years. I have admitted its virtues for commercial enterprise, but have been rather more than sceptical in regard to its application to agriculture. I have been a believer in the smaller local bank, trading largely on the moral asset and being in closer human touch with its rural customers. I still think that the local bank has much to recommend it.

"But a retrospect of the past three years, with pyramiding farm credits, forces me to the conclusion that no system of local banks could successfully have met the credit requirements of western Canada, at least, during the present season. That it was precisely the ability of our powerful banks to concentrate funds where needed when the pinch came that saved the situation for a very large number of farmers in the areas that have been drouth-stricken in recent years. We 'live and learn,' or ought to learn. I cheerfully admit that more recent information and contemplation have caused me to change my mind in regard to our banking system."

## Fewer Branches Opened

The past year has not been so marked by the increase of branches as was 1919, when some 800 were opened. There was a special reason for this, as during the war the shortage of staff precluded much activity in this direction. With the

return of so many of their men to civil life, the banks took advantage of the opportunity to extend into new territory, particularly in the west.

During the year the paid-up capital of several of the banks was substantially increased, through the payment of calls on stock issued during the previous year. The total paid-up capital at the end of September was \$126,927,040, and the rest \$130,325,640, increases of \$9,876,801 and \$7,283,890 respectively.

The total assets show a marked increase over 1919 and previous years. In 1914 they were, at the end of December, \$1,555,556,815, in 1919 \$2,967,373,695, and on October 31, 1920, \$3,155,601,568.

#### Money Is Depreciated

While in figures this shows marvellous growth, the changed value of the dollar must be taken into consideration. According to the Department of Labor, the index number for June, 1914, was 135.6, and for June, 1920, it was 346, indicating that the value of the dollar in 1920 was about 40 cents as compared with 1914. When the various statistics of trade and finance are adjusted on this basis the actual growth will be more clearly shown. The index number is a modern idea and one we will hear more of in the future. It is a device for keeping record of the variations in the price of commodities as a whole by establishing a certain average figure based on the prices of commodities in common use. Fluctuations in a commodity price affect the index number, thus affording a good record of one of the main factors affecting living con-

ditions. Money is a commodity as well as a measure of value, and when prices measured in money rise, the value of money as a commodity falls to the same extent, and more money is required to do the same volume of trade as before.

#### Educational Work

In recent years the Canadian bankers have realized the necessity of providing some system of education for the members of their staffs, along lines similar to those followed by the Scottish banks, which have so increased the efficiency in the banks of that country. Owing to the numerous branches, and the difficulty of giving their men the varied practical experience necessary to train them for work in other sections of the country, some method had to be found of grounding them in the theories on which all banking business should be based. For those in the cities courses of lectures have been established, and for those in the smaller centres courses in the various banking subjects are carried on by correspondence. Inducements have been offered by the various banks to the members of their staffs to take advantage of these facilities, and the wide response has shown a spirit of enquiry among the younger officers, which is full of promise for the future. Many of the larger American banks have these educational facilities. The National City Bank in New York, before sending out a man to their foreign branches, gives him a thorough grounding in the banking and commercial law and customs of the country to which he is sent, and thus endeavors to give him the confidence born of knowledge, which will, to a great extent, guard against mistakes both in policy and execution.

# Banks' Service in Public Finance

**Dominion Government Deposits Have Decreased During Past Year—Trend of Provincial Deposits Fairly Even—Municipalities and Provinces Increase their Loans—Holdings of Public Securities Have Been Liquidated to Meet Commercial Demands**

AS DEPOSITARIES of the Dominion government, Canadian banks during the past few years have performed a service of inestimable value. Ordinarily, the collection and disbursement of the national revenues involves considerable work, and the balances maintained by the government are supposed to recompense the banks, as these funds may be used for commercial or other purposes. When the Dominion government commenced floating domestic loans, however, the banks were called upon to act as intermediaries, and during each campaign and for some time after an enormous amount of work was done by these financial institutions with little remuneration. Following each loan large amounts were placed on deposit, but as the government did not float these loans for the purpose of holding the money on hand, these balances, an illustration of which will be seen in last year's figures, were quickly withdrawn, so that the banks benefited but little. Furthermore, interest on Canada's debt is paid through the banks, and small though this item may appear, it involves considerable work, and will continue to do so for some time.

As no domestic loans were floated in 1920, the work of the banks was somewhat reduced in this regard. Balances maintained by the government were also reduced, however, so that the banks had less money at their disposal.

The course of deposits of the provinces in chartered banks has been fairly even in the past few years, therefore this account calls for little comment. The following figures show the balances due to the Dominion and provincial governments at the end of each month since the beginning of 1919:—

1919 —	Due Dom. Government	Due Prov. Governments
January	\$236,119,588	\$21,238,779
February	238,256,091	20,800,869
March	228,201,515	21,646,571

	Due Dom. Government	Due Prov. Governments
1919 —		
April	188,129,800	21,754,210
May	113,860,593	26,196,865
June	128,890,218	24,454,438
July	140,575,172	23,499,116
August	100,639,909	23,552,757
September	110,217,948	24,094,698
October	121,028,537	20,699,308
November	350,381,389	17,625,464
December	224,926,921	19,032,841
1920 —		
January	\$224,597,564	\$20,276,072
February	217,059,832	19,864,020

April	261,044,115	19,178,187
May	216,098,321	20,691,300
June	183,913,852	23,955,524
July	170,190,302	26,344,597
August	153,359,936	25,057,401
September	156,410,480	20,933,968
October	160,129,252	24,942,898

### Loans to Provinces and Municipalities

Notwithstanding the increased amount of permanent financing during the past two years, provinces have greatly increased their bank loans. At the beginning of 1919 the total amount of these loans was \$5,410,289, while at the end of October last the figure was \$14,361,485.

Of more importance than loans to provinces, however, are loans to municipalities. During the past year these advances have shown large increases. The condition of the bond mar-

ket was, no doubt, the chief reason, but a review of the amount of permanent financing shows that bond issues were equally substantial in total as in the previous year.

Many municipalities, during the war and for some time after, refrained from spending large sums on improvements, some of which were really necessary. Consequently a number of these municipalities undertook to do that which they had neglected during times of stress. Had the bond market been anything like normal there would have, no doubt, been a flood of securities, but prevailing conditions prevented this. Evidently temporary accommodation had to be secured in a large number of cases.

The trend of these loans accounts since January, 1919, is shown in the following table:—

	Loans to Provinces	Loans to Municipalities
1919 —		
January .....	\$5,410,289	\$32,640,198
February .....	6,159,859	36,380,183
March .....	6,636,143	41,993,305
April .....	8,660,899	47,911,199
May .....	8,156,982	50,356,227
June .....	8,104,927	52,349,352
July .....	3,700,208	54,455,738
August .....	4,846,194	57,536,867
September .....	6,667,116	57,033,309
October .....	11,226,420	56,116,897
November .....	13,815,103	52,703,363
December .....	15,187,626	42,635,290
1920 —		
January .....	\$11,271,190	\$46,147,388
February .....	13,090,090	52,690,790
March .....	13,585,217	62,992,675
April .....	18,768,268	72,281,019
May .....	18,887,396	73,904,635
June .....	15,773,409	76,410,676
July .....	14,994,799	78,792,822
August .....	12,314,726	79,912,041
September .....	13,183,317	78,103,364
October .....	14,361,485	71,374,060

Public Security Holdings

Another public service which the banks perform is their extensive purchase of securities. During the past year, however, holdings of such securities have been greatly reduced. A large part of the amount under "Dominion government and provincial government securities" represents loans to the Do-

minion on security of treasury bills. It will be seen, therefore, from the figures given below, that the government has not been leaning so heavily on the banks as in 1919.

In times of easy money the banks employ surplus funds by purchasing such securities as municipal, railroad and other bonds. The year of 1920, however, was by no means a period of easy money, but rather extremely adverse. Demand for funds was so great that banks found it necessary to liquidate their holdings of securities and place the money where it could be used for commercial and other necessary purposes.

The following figures illustrate these remarks:—

	Dom and Prov. Gov. Securities	Can. Mun. & other public Securities	Railways & other bonds etc.
1919 —			
January .....	\$159,039,874	\$259,462,077	\$53,546,118
February .....	112,160,131	259,422,456	53,416,524
March .....	115,180,320	260,003,939	54,276,188
April .....	117,616,232	258,504,084	54,628,223
May .....	123,939,312	256,617,235	56,812,743
June .....	224,301,264	254,147,015	55,191,819
July .....	278,190,601	253,490,909	55,214,138
August .....	273,332,930	254,235,984	52,679,157
September .....	323,781,953	255,098,813	53,658,486
October .....	361,280,956	255,684,576	54,442,926
November .....	336,855,869	253,341,708	54,327,528
December .....	149,780,058	255,239,781	54,957,659
1920 —			
January .....	\$127,087,135	\$249,413,578	\$51,548,307
February .....	125,729,366	234,608,866	50,605,825
March .....	126,609,453	223,709,931	50,969,557
April .....	118,416,840	214,768,123	50,778,055
May .....	117,864,466	205,129,314	47,988,462
June .....	117,471,598	206,534,550	46,785,603
July .....	117,037,931	202,471,301	45,738,394
August .....	117,018,957	201,647,011	44,778,724
September .....	116,287,730	202,349,860	46,613,366
October .....	119,010,969	201,447,094	47,023,401

Under the heading of "Canadian municipal securities and British, foreign and colonial public securities other than Canadian," the chartered banks of the Dominion showed an amount of \$201,447,094 at the end of October, 1920. While the banks' holdings of Canadian municipal, foreign and colonial securities are considerable, the above figure chiefly represents obligations of Great Britain.

In 1916 the Canadian banks loaned the British government \$100,000,000 for the purchase of munitions, and a similar amount in 1917 for the purchase of wheat. These loans were originally advanced on a three-years' basis, at a moderate rate of interest, and renewals have been made from time to time. Of this \$200,000,000, one-quarter was paid off during the first five months of 1920, leaving a balance of \$150,000,000.

From the following figures, which illustrate the trend of the above mentioned account since the beginning of 1916, the loans and repayments are readily apparent:—

	1916.	1917.	1918.	1919.	1920.
January ...	\$41,746,948	\$163,299,724	\$235,989,801	\$259,462,077	\$249,413,678

Repay Balance by 1922

The remaining balance of \$150,000,000 is now being repaid, and will be wiped out by May, 1922. On November 1

and December 1, payments of \$5,000,000 were made, and it is the intention of the British government to continue monthly payments through 1921 and a part of 1922.

Great Britain still owes Canada about 180 millions, in addition, which represents the credit balance due the Canadian government on the various advances made mutually by the two governments to each other to cover their respective war expenditures in the two countries. No arrangements for the liquidation of this debt are known to have been made as yet. The repayment of the other debt of 150 millions to Canadian banks will, however, materially assist the credit position of the Dominion, and bankers express much satisfaction that the account is being thus disposed of.

Deputy Secretary Trowbridge, of the province of Alberta, announces that the total number of auto licenses sold in 1920 is 38,050, as compared with 34,000 last year. It was thought three months ago that the annual issue would reach the even 40,000 mark before the end of the year, but the drop in grain prices is held as accountable for the slackening of auto purchasing during the fall.

MONEYS COINED BY CANADA'S MINT

Gold, silver and bronze moneys coined and issued from January 1, 1919, to October 31, 1920, were as follows:—

	Gold pieces.	Value, \$	Silver pieces.	Value, \$	Bronze pieces.	Value, \$
Coined 1 Jan.—31 Dec., 1919	£135,889	661,326.47	22,903,234	3,195,878.15	11,201,347	112,013.47
1 Jan.—31 Oct., 1920	.....	.....	14,287,049	1,338,003.45	15,205,551	152,055.51
Issued 1 Jan.—31 Dec., 1919	171,042	832,404.40	.....	3,258,044.10	.....	115,100.00
1 Jan.—31 Oct., 1920	1	4.86	.....	1,076,000.00	.....	145,585.00

Note: The only gold pieces coined and issued were sovereigns.

# The Trust Companies' Business in 1920

Scarcity of Funds for Investment was Outstanding Feature of the Year—Capital Needed for Development of Farms and Industry—Succession Duty Legislation in Ontario—Law Respecting Beneficiaries—Growing Appreciation of Trust Company Service

By ROBERT BEATTIE  
National Trust Co., Toronto

THE scope of the business of Canadian trust companies is now so well known that there would be little value to such a paper as *The Monetary Times*, in any résumé of the work they carry on. The public is coming more and more to realize that the business of a trust company is to exercise the various functions which trustees exercise, and to see that there are advantages in having these functions carried out by corporate bodies instead of by individuals. Accordingly, the trust companies have had steady and satisfactory development of their business as executors and administrators, and in the various other trusteeships which modern business requires. The purpose of this review, however, is not to dwell on this development, but merely to refer briefly to certain points of special interest and concern to which the attention of trust company officials has been directed during the year.

## Shortage of Capital

The outstanding feature of the past year has been scarcity of funds available to the lending corporations for investment. The significance of this fact from the national point of view will be recognized if it is borne in mind that the development of Canadian agriculture depends to a very considerable degree on the moneys loaned to Canadian farmers by Canadian loan and trust companies.

In the past funds have reached the farmers from two sources. The first source was formerly the savings of the people in European countries, notably Scotland, Holland, Belgium and France, who, prior to the war, sent through European agencies and Canadian trust and loan companies large sums for investment in Canada. The European requirements of capital for war purposes combined, with adverse exchange rates during the war, to slacken the flow of funds. In the later stages of the conflict, European capital became increasingly difficult to obtain, and since the war it has become impossible to send money profitably out of Europe for investment. This source of supply has therefore been cut off. At annual meetings of trust companies during the year it was pointed out—and up to the present the statement has proved true—that for an indefinite time Canada would be thrown more and more on her own resources for the capital needed for her development. Contrary to what might perhaps have been expected, the United States has not yet furnished any considerable amount of money for Canadian mortgage loans. Although present exchange conditions offer American investing corporations advantages in this field, the demand for farm loans in the United States has so far been strong enough to prevent American capital from seeking this Canadian outlet.

The other source from which money formerly reached the Canadian farmer was the funds which the trust and loan companies administer as part of the assets in their care or themselves own—their capital and reserve. So far as the trust companies are concerned, this is now almost the only source available for mortgage money. With the general increase of trust company business, it has grown substantially. Competing with the demand for farm loans, however, is the need of municipalities and industries for capital, resulting in offerings by such corporations of bonds at attractive rates. Many trust company officials feel, therefore, that the domestic source of supply above mentioned is not likely to be by any means sufficient to meet the probable early needs of the country for capital. Already at least one of the provincial governments has undertaken a national cam-

paign to sell bonds with the object of lending the proceeds to farmers. Another has opened savings banks in an effort to supply funds for farm development. These are only two of the many signs which show that in order to discharge their function in the community—to provide sufficient funds so that governments shall not be obliged to exhaust their credit (already strained) to take care of the recognized public undertakings and services) in financing private enterprise—the companies will have to make every effort consistent with their duty to their clients to attract funds for investment on mortgage security.

## Outstanding Loans In Good Condition

On the other hand, the outlook for loans already made is of the brightest. There is every prospect that the farmers, after the marketing of the crop of 1920, will have funds to meet all their commitments. Their need for capital will, however, be none the less, because it is these very successful farmers who should develop mixed farming. This will make them borrowers of the highest class of such funds as the companies have available. Their assets already developed will give them ample security for necessary loans, and their borrowings will be invested in the erection of new buildings, the purchase of better stock, and generally in the improvement of their holdings. During the past few years the improvement along this line, in the west particularly, has been phenomenal. The rude farm shacks, which at one time were fairly common in some sections, have given place to substantial dwellings. Improved barns and outbuildings and increased farm machinery, have replaced the earlier limited equipment. Electric light, motor transit, better roads and telephones have broken down the isolation which used to make life in the farming districts difficult. The faith of those who early saw the future of Canada's vast spaces is being completely justified.

## Succession Duties

Another field is of interest to trust companies—the field of legislation dealing with property. The year just ended has seen several new laws passed which affect their dealings with property in their charge. In Ontario the most important law, perhaps, has been the Succession Duty Amendment Act, passed at the late session of the legislature. In the form earlier proposed, this law contained changes which were far-reaching, but it was so modified subsequently, that it refers in its final form only to the exemptions of estates from death duties and to the rates payable on estates of various sizes passing to various classes of beneficiaries. In 1905 estates aggregating \$50,000 or less were exempted from taxation if they passed to lineal beneficiaries. This exemption was subsequently reduced to \$25,000. As a result of other changes, of which the one of the past year is the latest, only estates of \$10,000 or less are exempt if passing to near collateral relations, and only estates of \$5,000 or less are exempt if passing to remote collaterals or strangers in blood.

Another change brought about by the recent Succession Duty Act refers to the administration of the law. Under former arrangements the Succession Duty Office was required to satisfy itself that there had been no undervaluation of the assets which came under its survey. This duty is now transferred to the Surrogate Judge concerned with the probate of the will. The duty of making the valuation remains,

of course, where it has always rested—on the executor of the estate.

#### Beneficiaries

Another law recently passed which affects the procedure of the companies, concerned as they often are in the tracing of missing beneficiaries of estates in their charge, is the Absentee Act, passed also last session in Ontario. This act provides that the Court may declare a person an absentee. An absentee it defines as "one who having had his usual place of residence or domicile in Ontario, has disappeared, whose whereabouts are unknown, and as to whom there is no knowledge as to whether he is alive or dead." The Court may also make an order for administering the property of an absentee and a committee may be appointed for the purpose. The powers and duties of the committee are the same as those of a committee of the estate of a lunatic. The act specifically provides that a trust company with or without one or more persons may be appointed such a committee.

The last legislation to which attention should be drawn in an article such as this is the new bankruptcy law of the Dominion, which went into force in July. The advantages of this act in making uniform the regulations of all the provinces dealing with this important matter are obvious. So far as the trust companies are concerned, the law has been in operation too short a time as yet for a forecast to be possible of its defects on their work. That trust companies have superior facilities for the performance of the duties of trustees in bankruptcy, as well as those of receivers, liquidators and assignees, no one acquainted with their organization will question. Their offices are in many cases distributed

throughout the country, and each office staff includes experts with long training and intimate acquaintance with local conditions. Trust company officials generally believe that as time goes on the amount of work of this kind which they are asked to perform will become very large.

#### The Volume of Business

The editor of *The Monetary Times* has suggested that its readers might like to know "how trust companies get their business." It is not easy to give an accurate and confident answer to this question, since although the companies know what are the influences which lead a man or woman to entrust his or her affairs to them, it is very difficult for them to class these influences in the order of their power or importance. The companies would agree that one of the most important causes of their appointment to positions of trust, is the advice which solicitors give their clients. Another factor is the high reputation of the individual company—direction, executive and staff. This explains, however, rather the appointment of one company instead of another, than the appointment of a company instead of a person. Perhaps the most valuable influence is that of satisfied clients and beneficiaries: for it holds in the trust company business as in any other that the best advertisement is a satisfied customer. It remains to name advertising as the means by which the companies try to find new clients to satisfy. In recent years most companies have made steady efforts to explain their service to the public, and there can be little doubt that general knowledge of the duties which the companies perform is growing.

## Canadian Banks Expand in Foreign Field

Movement of 1919 Continued in 1920—Montreal Makes Important Connection, and Commerce and Royal Increase Branches in South—Foreign Branches Bring Capital to Canada—How They Help the Canadian Exporter

By G. F. Towers, B.A.

Superintendent, Foreign Trade Department, Royal Bank of Canada

THE year 1920 has been one of development for Canadian banks abroad, a development accomplished partly by means of alliances with established banks, partly by the opening of foreign branches of our own institutions. Last year's Annual of *The Monetary Times* signalled the entry of the Royal Bank of Canada into Argentina, Uruguay and Brazil, where branches were established at Buenos Aires, Montevideo and Rio de Janeiro respectively. The same review noted the connection of the Dominion Bank with the British Overseas Bank, Ltd., head office London, an organization formed to handle foreign trade, and also the affiliation of the Union Bank of Canada with the Park Union Banking Corporation, operating in the far east. Branches of the latter had even then been opened in China and Japan.

#### The Year 1920

Developments of this nature have gone on in force during 1920. The Bank of Montreal acquired an interest in the Colonial Bank, a British organization with strong connections through the British West Indies. The Canadian Bank of Commerce entered the Caribbean field, and by November 30th last had established branches in Havana, Cuba, and Kingston, Jamaica. They had further announced their intention of commencing business in Rio de Janeiro, Brazil, and Port of Spain, Trinidad. Finally, the Royal Bank of Canada, throughout the year, pursued its policy of expansion, increasing the number of its branches in Caribbean countries, and opening in Barranquilla, Colombia, and Santos and Sao Paulo, Brazil. This bank now covers all the islands of the Caribbean and seven countries in Central and South America. The total number of foreign branches of Canadian banks is now probably one hundred and fifty, not including their offices in Newfoundland.

This compares with little over one hundred branches on October 31st of last year.

#### Foreign Deposits Increase 40 Per Cent.

The growth of old branches and establishment of new offices have been reflected in the figures of the monthly statement of the chartered banks to the Dominion government. The increase in foreign deposits has been striking. On September 30th, 1919, the consolidated monthly return showed \$255,000,000 under the head of "deposits elsewhere than in Canada." This amount had increased about 40 per cent., to \$355,000,000, by September 30th last. Of the \$100,000,000 increase the Royal Bank of Canada contributed \$67,000,000, the deposits in their foreign branches increasing in the twelve-month period from \$113,000,000 to \$180,000,000. During this 40 per cent. increase in foreign deposits Canadian notice and demand deposits increased a little less than 4 per cent., and total assets of all Canadian banks about 10 per cent.

Current loans and discounts elsewhere than in Canada are always less than foreign deposits. On September 30, 1919, the former were \$151,000,000. On September 30, 1920, they stood at \$202,000,000, or about 57 per cent. of the foreign deposits on that date. The idea that foreign expansion of our Canadian banks would divert to other countries the capital urgently required for Canadian development should by now be thoroughly discredited. It is interesting to note that at the time when exponents of this theory were most numerous in Canada they were also in force in the countries where our banks were locating, the only difference being that the contention of the citizens of these countries reversed the Canadian viewpoint, since they claimed that the foreign banks in their midst diverted

local capital to the countries where the banks' head offices were located.

Detailed figures of changes during the twelve months ending September 30th last are given below:—

All Canadian Chartered Banks — Figures of Deposits, Etc., Elsewhere Than in Canada			
	Sept. 30,'19	Sept. 30,'20	Increase
Deposits .....	\$255,274,256	\$355,238,992	\$99,964,736
Current loans and dis- counts .....	151,814,511	202,590,184	50,774,673
Due to banks and bank- ing correspondents	37,433,749	63,667,391	26,233,642
Due from banks and banking correspon- dents .....	59,644,718	73,476,022	13,831,304
Call and short loans...	169,532,489	186,962,960	17,430,471

#### Our Foreign Trade and Foreign Banking Status

Canada's foreign banking system is an organization singularly complete for a country of this size. It is perhaps little realized how comparatively far advanced Canada is in this, as in other aspects of our foreign relations. Argentina has as large a population, Brazil a much larger one, yet, leaving foreign-controlled banks out of consideration, neither country has anything approaching the foreign or domestic banking systems possessed by Canada. England's wonderful foreign banking organization reached its present position after seventy-five years of development. The United States, on the other hand, had no real organization of this sort until after the commencement of the war. The need for it was felt long before it came into being; and the speed with which it had to be created, joined to the lack of anything to build on, greatly increased the difficulties which have always to be faced by any expanding organization.

A survey of Canadian foreign trade figures, from the point of view of Canadian progressiveness, reveals a somewhat similar situation. In the fiscal year ending March 31, 1918, Canadian exports and imports were valued at over two and a half billion dollars, or three hundred dollars per head of our eight and a half million people. England's foreign trade was \$277 per capita during approximately the same period; that of the United States—the enormous figures of which have been given so much publicity—was only \$97 per capita. India and China, thickly populated but poorly developed, have respectively a per capita foreign trade of \$5 and \$3 per annum.

The transaction of foreign business on this scale, and the provision of facilities for financing the major portion of it, are phenomena not ordinarily seen in a country of our size and stage of development.

#### Export Trade

A year ago the surveys of 1919 which were being published were able to review a year of unbroken prosperity. Agricultural, manufacturing, wholesale and retail distributing industries—all were on the crest of the wave; and if Canadian foreign trade did not equal the record of 1918, it was still very large, and showed a surplus of exports amounting to three hundred million dollars for the year. In many lines the question was more one of supply than of demand. So strong was the buying power of the domestic market that export trade was not of primary interest to many manufacturers, though much was said and written about it. The present situation is far from being equal to that of last year. 1920 will be a record year for some industries. Others have already been hit by the slump. But all now realize that readjustment is at hand and that the prospects for 1921 are uncertain. There will be more reason to cultivate export trade at a time, however, when other countries will be suffering from the same difficulties as ourselves. Competition will be keen, orders difficult to secure, and when secured should be accepted only after a most careful investigation of the credit standing of the intending purchaser.

#### What Canadian Banks Can Do

Our Canadian bank branches abroad are going to be of great assistance in this period. They are ready to help Can-

adian industries and export trade in any possible way. The supplying of information on foreign markets and conditions, and on foreign exchange, is one of the first services they can render. They are often in a position to put Canadian manufacturers in touch with foreign importers. Any actual business obtained naturally depends on the cost and quality of the product. Canadian banks with foreign branches or affiliations, by reason of being closely in touch with foreign conditions are in a better position to discount their clients' documentary drafts on recognized foreign houses than they would be if they had confined themselves to domestic business, since it is quite possible that they will know the foreign firm in question or hold private reports on its responsibility. The most important service is, of course, the supplying of full credit information on foreign houses to Canadian business men. The necessity of obtaining this through doubtful or unfamiliar sources would have a tendency to lessen the confidence of Canadian houses in the value of the reports and to increase the difficulties of the Canadian manufacturer who was endeavoring to book foreign orders. Happily this necessity does not exist as far as many countries are concerned. Canadian firms are at liberty to take full advantage of the facilities offered. No charge is made, nor, as far as we know, is there any stipulation that enquirers should be clients of the bank concerned.

#### RURAL CREDITS MOVEMENT GROWS IN MANITOBA

Twenty New Societies Organized in 1920, and Loans  
More Than Doubled

MANITOBA'S rural credit system had another year of expansion in 1920. This is the only province which has such a system in active operation, but some of the other provinces have taken steps in this direction. Ontario appointed a commission last year to enquire into the subject, and a report is expected shortly. Regarding progress in 1920, C. N. Gifford, supervisor of the Manitoba system, said in a statement to *The Monetary Times*:—

"The Manitoba Rural Credits Act has been in force about three and a half years. The following table shows the growth in the number of societies and the business done:—

Year	No. of societies	Amount of loans granted
1917 .....	1	\$16,600
1918 .....	10	215,581
1919 .....	38	1,051,876
1920 .....	58	2,480,345

#### More Being Formed

"While we have only 58 societies in actual operation there are ten more to which charters have been issued, and which are in the formation stage. The number of farmers who are members of the societies would be slightly over 4,000, with 510 directors.

"A combined financial statement of the 38 societies doing business in 1919 shows them with an authorized capital of \$760,000, a subscribed capital of \$429,950, and a paid-up capital of \$64,175. Of the unpaid capital \$168,000 represents the balance on their shares which the province of Manitoba and the rural municipalities can be called on for; \$58,573 of the paid-up capital is invested in municipal, school district and government bonds.

"The societies operate on a 1 per cent. margin; after paying all expenses they show a net profit of \$3,200. After a society has been operating two years they cannot only pay all expenses but show a good surplus, which is being used to create a reserve fund to take care of any loans that might occur. So far not one dollar has had to be written off.

"During 1920 part of the loans were carried by the banks, but the largest part of the funds for loaning were borrowed by the societies from the provincial government.

"Our loans are practically all due in December. We have due up to November \$130,000. To date (November 19th) our collections amount to \$124,780."

# Bank Loans in Relation to Deposits

Loans in Canada Increased by \$359,000,000 — While Increase in Deposits Was Only \$79,000,000—This Demand for Funds Naturally Strained Banking Facilities — All Classes of Borrowers Affected

By O. A. HARPER

Manager, Sterling Bank, Winnipeg, Man.

"ARE we going to let the east shut off our credit like that?" or words to that effect, is a question recently asked the writer by a man well versed in business. We were discussing the affairs of a certain wholesaler whose maturing payments were being demanded by eastern manufacturers. To all appearances he is solvent but requires an extension of time to meet payments. He has not been able to sell or collect for his stock as expected. Trade is dull in his line and his shelves are full in the face of falling prices.

This question expresses a sentiment that is causing a sectional division in the Dominion which, if allowed to grow, will seriously retard recovery from a trade depression felt in east and west alike. Is it reasonable?

## Stringency is a General Condition

One cannot lend what he does not have. Working from this premise, examine the financial condition of the country which is reflected in the loans and deposits of the chartered banks. Some of the figures given in *The Monetary Times* of November 5 may well be repeated. These figures show that neither eastern manufacturer, western wholesaler, banker, nor any other individual, class or section, is alone responsible for the present tight money condition. The mass of the people as a whole are responsible. They must produce more than they consume and save substantially before they can expect increased credit facilities.

The last government return of the banks available at time of writing is up to the end of September, and figures of demand or current account and savings bank deposits for the preceding twelve months are as follows:—

	Deposits payable on demand.	Deposits payable after notice.
1919—September	\$650,743,015	\$1,227,437,715
October	705,280,241	1,262,746,984
November	728,657,589	1,137,858,277
December	703,329,292	1,138,086,691
1920—January	621,408,024	1,163,297,037
February	620,069,555	1,187,027,307
March	657,412,028	1,197,719,570
April	652,918,760	1,209,573,990
May	645,957,229	1,229,073,515
June	659,622,583	1,243,700,977
July	639,415,025	1,253,170,443
August	640,361,707	1,261,647,732
September	677,286,905	1,270,194,097

It will be noted that there is an increase in demand deposits for the year, of almost \$27,000,000, but as these funds are for immediate current use, they cannot be relied on by the banks as a basis for extending credit. Notice or savings bank deposits show an increase of almost \$53,000,000, making a total increase in deposits of only \$79,000,000. As against this, note the following figures for commercial loans for the same period:—

	Current in Canada.	Call in Canada.
1919—September	\$1,058,572,202	\$ 96,912,709
October	1,104,940,160	100,549,390
November	1,189,408,423	121,754,469
December	1,207,109,046	125,888,760
1920—January	1,226,962,963	132,015,334
February	1,257,015,902	127,251,919
March	1,322,267,030	128,233,310

	Current in Canada.	Call in Canada.
Loans.		
April	1,347,238,230	125,644,859
May	1,349,079,981	119,114,493
June	1,365,151,083	115,272,587
July	1,377,276,853	115,360,894
August	1,385,470,153	113,598,923
September	1,417,520,756	114,669,611

## Loans Have Outrun Deposits

There was an increase in commercial loans in Canada for the twelve months of \$359,000,000, as against the increase in total deposits of \$79,000,000. Total commercial loans amount to \$147,000,000 more than the total savings bank deposits. The answer to the thought underlying the opening question of this article is contained in these figures. Commercial loans in one year have increased \$280,000,000 faster than all deposits, and new loans cannot be extended to develop future business unless promises to repay are kept as they mature. The eastern manufacturer is in the same position as the western wholesaler and every one else. He must pay his bills as they fall due or business as a whole must slow up or halt.

Where has this money to increase the loans come from and who borrowed it? are two questions often asked.

## Have Reduced Security Holdings

In answer to the first, I would point out, the bank statement referred to show the banks have withdrawn \$267,000,000 during the year from Dominion and provincial government, municipal and other securities. The banks had prepared for a readjustment period after the war. Even after withdrawing the above amount from their liquid assets they are in a very strong position, but they cannot continue to convert their immediately available assets into commercial paper and at the same time remain in a sound banking condition. The balance of the increase in commercial loans, \$20,000,000, was obtained from various sources in comparatively small amounts.

Who borrowed this money? The popular opinion is that the profiteer has it to enable him to hold goods or grain for exorbitant profits. No one considers himself the profiteer, so all are ready to share the popular opinion and blame the other fellow.

The manufacturers and the wholesalers always have used a share of the loans, and it is natural to assume that in the face of higher prices their loans are considerably larger than in pre-war times. But as all loans and deposits have grown since those good old days, it does not follow that they have a larger proportion than formerly.

## Loans to Farmers Have Grown

The farmers, and especially the western farmers, have always required large credits during the spring, summer and early fall seasons. There are good reasons for assuming that this fall they have a larger proportion of credit than usual.

First,—They have been operating under higher costs of seed, labor and all the incidental expenses that enter into farming.

Second,—Some sections of the western provinces have had as many as three years' bad crops in succession. The

result is that loans in these sections have had to be carried over and increased from year to year.

Third,—In these districts of bad crops, where farmers were not in a position to warrant increased loans, the governments or municipalities have assisted them to obtain credit, with the result that many such loans have increased and still remain unpaid.

Fourth,—The farmers depended on higher prices this fall and had obligated themselves accordingly. Now, with the prices down, many of them cannot realize enough to pay all their debts, and many more refuse to sell their crops at prevailing prices, with the result that neither their merchant nor their banker is paid. The merchant must ask an exten-

sion from the wholesaler, who in turn asks an extension from the manufacturer and thus all are prevented from reducing their indebtedness. This latter condition also arises from many other small consumers not meeting their local bills promptly.

No analysis of loans as to the occupation or district of borrowers is available, but if such an analysis could be made it is fairly certain that the increased loans resulting in tight money would be found to be spread over all classes and businesses, farmers included. Thus, instead of the blame being placed on the east or the manufacturer, it would fall on the public as a whole, who are not saving sufficient of their production to develop a young and growing country. No man can lend what he has not.

## Dominion Note Circulation Around \$300,000,000

Went Down in Midsummer But Rose Again in Autumn—Gold Reserve is \$27,000,000 Less Than Last Year — Securities Held Against Dominion Notes Outstanding—Currency and the Movement of Prices

CANADA'S government issues are based on a gold reserve, the ratio of which, however, through the exigencies of war finance, has been considerably reduced. The Dominion Note Act of 1914, by which the issue is authorized, permits an issue of \$50,000,000 in the first instance against a reserve of 25 per cent. of this amount in specie, any additional issue to be covered by an amount in gold equal to any issue in excess of \$50,000,000.

These requirements were modified subsequently by the necessity of providing funds in connection with the taking over by the government of the Canadian Northern and the Grand Trunk Pacific Railways. Sixteen million dollars was required for this purpose and another \$10,000,000 to meet maturing obligations of the government in connection with the war.

For the \$16,000,000 securities of these railways are held but are not included in the list of approved securities reported in the government returns as held against issues of Dominion notes. Virtually, therefore, issues of \$76,000,000 are authorized against a reserve of \$12,500,000 gold, or an uncovered issue of \$63,500,000.

While the act calls for gold equal to any additional issue, the Finance Act of 1914 permits advances to banks by the issue of Dominion notes against approved security. This has undoubtedly been availed of to a considerable extent in order to provide the additional currency required to handle the business of the country at the prevailing high prices. No exact details, however, of the amount so advanced are given in any of the returns published by the government, these advances being apparently included in "Balances due to Dominion government after deducting advances for credits, pay lists, etc." in the monthly bank statement.

### Considerable Inflation

While there is ample security for the issue the ratio of actual gold held has decreased materially since 1914, and as the basis of our currency is gold, there is consequently inflation in proportion to the decrease in the ratio of specie actually held. Considering, however, the strain on the finances of the country by the war, as well as by the consequent dislocation of trade, it is a tribute to the soundness of Canada's financial position that this inflation is not far greater. To realize this it is only necessary to compare the position of Canada's currency with that of other nations. The value of currency compared with commodities, as shown in the wholesale prices current in different countries is a reasonable indication of the inflation of the currency. The September Commercial Letter of the Canadian Bank of Commerce gives the rise in these prices since 1914:

	Per cent.
Canada -----	150
Australia -----	112
United States -----	112
United Kingdom -----	200
France -----	300
Italy -----	400

In France and Italy the percentage in the early part of the year was considerably higher.

The government issues and the specie held against them at the close of the fiscal year since 1914 were as follows:

		Per cent.
1914 -----	\$114,000,000	\$92,000,000 81
1915 -----	152,000,000	89,000,000 59
1916 -----	175,000,000	114,000,000 65
1917 -----	178,000,000	119,000,000 67
1918 -----	281,000,000	114,000,000 41
1919 -----	229,000,000	118,000,000 59

In considering, however, the gold reserves of the country and the outstanding circulation, the bank issues and the gold held by them must be taken into consideration.

The total of Dominion notes outstanding over the period of 13 months ended October 31, 1920, with the gold reserve and the amount issued against securities, is shown by the following table:

	Total	Gold Reserve	Notes Against Securities
1919 —			
October -----	\$311,639,746	\$122,633,554	\$146,020,900
November -----	328,010,829	123,719,093	162,957,000
December -----	318,690,089	114,821,962	154,237,000
1920 —			
January -----	\$303,678,278	\$105,165,301	\$149,289,375
February -----	305,404,160	105,609,980	151,064,375
March -----	311,932,791	100,286,280	157,566,725
April -----	309,142,651	101,636,652	154,262,225
May -----	300,241,483	102,495,683	146,056,725
June -----	292,016,290	99,619,182	138,036,125
July -----	293,541,399	95,510,383	139,749,125
August -----	292,086,025	95,183,753	138,437,125
September -----	303,065,376	95,205,901	149,620,125
October -----	320,012,915	95,222,381	166,715,125

Since the inauguration of the drainage scheme in Manitoba, it is estimated that 3,200,000 acres of land, believed to be unsuitable for agriculture, have been brought under cultivation.

		<u>\$480,760,624 51</u>

B. E. WALKER, President.

JOHN AIRD, General Manager.

### Report of the Auditors to the Shareholders of The Canadian Bank of Commerce.

In accordance with the provisions of sub-sections 19 and 20 of section 56 of the Bank Act, 1913, we report as follows:—

We have audited the above Balance Sheet and compared it with the books and vouchers at Head Office and with the certified returns from the branches. We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We have checked the cash, and verified the securities representing the investments of the Bank, at its chief office and principal branches at a date other than that of the verification at the chief office on the 30th November, 1920, and found that they were in agreement with the entries in the books of the Bank relating thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

T. HARRY WEBB, C.A.,  
of George A. Touche & Co. } Auditors.  
JAMES MARWICK, C.A.,  
of Marwick, Mitchell & Co. }

FROM Halifax and Charlottetown, settled and historic, on the Atlantic, to Prince Rupert, and Vancouver, new and growing, on the Pacific, are more than 400 branches of the Union Bank of Canada. In frontier towns, in peaceful farming districts and in bustling cities, they stand at strategic points in the pathways of Canadian trade and commerce, linking East with West, North with South.

Our nation-wide Banking Service is always at the disposal of producers, business men and individuals.

Abroad, we have our own New York Agency (49 Wall St.) and two branches in London, Eng., (6 Princes' St. E.C., and 26 Haymarket, S.W.) In addition, branches of the Park-Union Foreign Banking Corporation, which is jointly owned and controlled by the National Park Bank of N.Y., and the Union Bank of Canada, offer direct banking connections in the Orient; at San Francisco and Seattle, in the U.S.; and in Paris, France.

## UNION BANK OF CANADA

Capital and Reserve \$14,149,296.47

Assets (Nov. 30, 1920) \$169,205,445.39

During the years 1916 and 1917, the chief movements were as follows:—1916.—Increases.—France, 203.0; England, 83.5; Reichsbank, 126.0; Netherlands, 49.0; U.S. Treasury, 453.0; Argentina, 51.5; Japan, 41.0. Decreases.—Russia, 147.3; Italy, 36.0; Austria-Hungary, 12.1. 1917.—Increases.—France, 214.2; England, 87.7; Spain, 78.7; Netherlands, 58.1; Sweden, 13.6; U.S. Treasury, 492.0; Japan, 65.6. Decreases.—Russia, 129.5; Italy, 33.4; Reichsbank, 120.3; Austria-Hungary, 11.9. The totals for the two years respectively were:—Europe, 757.0 and 768.2; America, 504.5 and 543.8; Asia, 56.9 and 84.1; and Colonies, 54.7 and 58.0. The grand totals were 1,373.1 and 1,474.1.

It will be seen that the annual increase in the gold holdings of these state banks and treasuries was greatest in 1915, and that in 1919 there was a material loss, particularly in the case of Germany, the United States, and Russia, though Japan showed a marked increase.

### Stock of Gold Money

During the period covered the aggregate stock of gold money has been materially added to, as shown by the following table, which shows how the stock has been built up to the extent of £356,000,000 since the end of 1913:—

(In millions of pounds. Gold at 85s. per fine oz.)

	World's output of gold.	Industrial consumption (Europe and America).	India's absorption (year to March 31 following).	Egypt's absorption.	Balance available as gold money.	Aggregate stock of gold money (Dec. 31).
1912	55.9	25.6	25.2	4.2	40.9	1,516
1913	94.7	27.3	18.0	—	59.3	1,596
1914	90.4	(21)	7.6	—5.0	66.8	1,663
1915	96.4	(17)	1.7	—0.8	78.5	1,742
1916	83.5	(18)	11.1	—	64.4	1,806
1917	86.3	(16)	19.0	—	51.3	1,857
1918	78.2	(16)	—	—	63.8	1,921
1919	72.0	(22)	19.4	—	30.6	1,952

The totals in the last column give the stock of gold money as arrived at by the writer's method, which is sufficiently indicated in the table. Other estimates differ considerably, the estimate of the United States Treasury, quoted in *The Economist* Commercial History Supplement of February 16, 1918, being £2,095,000,000 at the end of 1913.

### Falling off in Gold Production

The foregoing table shows the striking falling off in the gold production since 1915, and the still greater drop in the amount of that production which is available as money. For 1919 the latter was about £31,000,000, as compared with about £45,000,000 per annum in the few years before the war—the war years for special reasons added abnormally to the stock of money. As the gold output for 1920, and possibly for succeeding years, will show a further decline, anything like a normal demand by industry and India would leave as available for money each year an amount which under pre-war conditions would have been inadequate for the growing trade and commerce of the world. Indeed, the total stock of gold money, which rose strongly from 127d. per head of the world's population in 1893 to 259d. in 1918 and 261d. in 1919, seems, for the near future at least, to have reached a point at which it will do little more than merely keep pace with the growing population. It should be pointed out that the last table takes no account of immeasurable items such as the recent absorption of gold by China and the illicit import into India, both of which (affecting 1919 in particular) should, if known, be deducted from the aggregate figures given, which exclude Asia.

### War Movements of Gold

Having thus arrived at figures both for the aggregate stock of gold money and for the portion of that amount which is to be found in state banks and treasuries, it is possible, by comparing them, to get some idea of the migration of gold money during the war—a picture which, as regards this movement, will be approximately correct, even if the aggregate stock of gold money is materially different from that set down:—

	(In millions of pounds)		(In millions of pounds)		(In millions of pounds)	
	State banks and treasuries.	Year's increase or decrease.	Private banks, hoarded, and in circulation (difference figures).	Year's increase or decrease.	Stock of gold money.	Year's increase.
Dec. 31.	Total.		Total.		Total.	
1913	945	—	651	—	1,596	—
1914	1,034	89	629	—22	1,663	67
1915	1,228	194	514	—115	1,742	79
1916	1,373	145	433	—81	1,806	64
1917	1,474	191	333	—50	1,857	51
1918	1,500	26	421	33	1,921	64
1919	1,438	—62	514	93	1,952	31
		493		—137		356

Here one sees gold flowing from the pockets of the public into the state banks and treasuries, the stream reaching its height in 1915 and diminishing yearly since, as one would expect.

### Increased State Holdings

The state banks and treasuries have not only absorbed the whole of the new gold production available, but have taken £230,000,000 in addition in the five years to 1918, during which period they increased their stock by 59 per cent. If the £421,000,000 shown at the end of 1918 as being in private banks, hoarded, and in circulation is at all near the mark, it has, of course, become largely immobilized, and is now mostly held by banks or has been hoarded.

In view of the figures in connection with net imports into this country, referred to later, and the recent unknown absorption of China and India, already mentioned, the 1919 figures in this table are subject to much correction, and there was in reality no such drop as £62,000,000 in the holdings of state banks and treasuries, though the totals at the end of last June given in the first table fairly represent the real position.

On a percentage basis, if we leave out Australia, the most gold has flowed into Japan, which profited much from the war; but absolutely the United States has taken most. State banks and treasuries increased their stock to the end of 1918 by £555,000,000, of which no less than £259,000,000 went to the United States, whose record is as follows:—

	(In millions of pounds)		Total stock.	Proportion of world's stock.	Year's increase.	Net imports or exports.
	In treasury.	In circulation.				
Dec. 31—						
1913	266	126	392	24.6%	—	—
1914	243	128	371	22.3%	—21	—84
1915	347	126	473	27.1%	102	+87
1916	453	137	590	32.7%	117	+109
1917	492	139	631	34.0%	41	+37
1918	525	126	651	33.9%	20	+4
1919	467	107	574	29.5%	—77	—60
					182	+143
June 30—						
1920	445	108	553	28.2%	—	—

### Eastern Absorption of Gold

Since the end of 1918 that country has lost about £100,000,000. Where has it gone to? Mainly to Asia. £25,000,000 has gone to Japan, and the balance, or most of it, to China and India. At the Royal Statistical Society's meeting on June 15 Sir Charles Addis said that £60,000,000 had been imported by China recently, and doubtless part of that has in turn gone via Tibet and the Burmese border into India, which has also smuggled considerable amounts from other places, including South Africa, where several millions have vanished from circulation. The illicit imports into India, where gold has sold at large premiums in the bazaars, are reckoned by the *Times of India* (June, 1920) to have reached £4,000,000 a month.

Most of the gold shipped home by South Africa is reaching the east. The gold re-exported to South Africa has gone to make up the wastage caused by illicit export to India, the amount sent to the Straits Settlements must have largely gone in the same direction; and it is probably not far wrong to say that in this way £20,000,000 of gold extracted from South African mines in the last nine months has found or will find its way to India.

HEAD OFFICE OF THE DOMINION BANK, TORONTO

CLARENCE A. BOGERT, General Manager

In the year to March 31, 1920, India's declared net imports of gold reached £17,400,000, practically all in the last five months of the time, the amount increasing rapidly until March showed twice the figure of November. The net exports from the United Kingdom to India for the six months to June 30 last were £18,211,000. Declared gold holdings (as given in the first table) are sometimes deceptive. During the five months July to November, 1919, there were net imports into the United Kingdom amounting to £54,854,000, and the Bank of England's declared gold holding showed an increase of only £3,223,000 during that period. £42,886,000 of the amount came from Holland and Belgium, and was doubtless largely German gold intended to pay for food-stuffs. During the first six months of this year we have exported (net) £19,052,000 of gold, and in the same time the Bank of England's declared gold holding was advanced £26,600,000! Thus the declared position seems to have been reversed.

#### Principal Gold-Holding Countries

It is interesting to note that the pre-war and present positions of the principal gold-holding countries of the world are:—

	(In millions of pounds)				
	State bank.	Pre-war. In banks and in circulation.	Total.	Now. State bank.	Now. "Lost," or hoarded.
United States, Dec. 31, 1914. (U.S. Mint) . . . . .	243	128	371	445	74*
France, Dec. 31, 1914 . . . . .	166	119	285	144	141
Russia, Dec. 31 1914 (U.S. Mint) . . . . .	155	49	204	(?) 65	139 . . .
Germany, Dec. 31, 1918 (Frankfurter Zeitung) . . . . .	69	112	181	55	126
United Kingdom, June 30, 1914 (Currency Committee) . . . . .	38	123	161	146	15
Totals . . . . .	671	531	1,202	855	347

\*Gained.

The record of the United Kingdom, so far as it can be traced, is:—

	June 30, 1914.	June 30, 1915.	June 30, 1919.	June 30, 1920.
Bank of England . . . . .	£38,000,000	£31,000,000	£117,000,000	£146,000,000
Banks . . . . .	45,000,000 (?)	40,000,000	(?) 50,000,000	(?) 50,000,000
Public . . . . .	78,000,000	75,000,000		
	£161,000,000	£196,000,000	£167,000,000	£196,000,000

The Currency Committee recommended that the stock of gold in the Central Institution should be increased to £150,000,000, and this has now been attained.

#### BANK PREMISES AT COST

In the year 1919 there were more branches of Canadian banks opened than in any previous period in the banking history of the Dominion. Great expansion in this connection also took place during 1920, although not on quite as large a scale. The figures given below reflect this to some extent, showing the value of bank premises, month by month since January, 1917. The amounts given, however, do not represent the present-day value of the banks' premises. The government requires that this item in the monthly statement be valued at not more than cost, less depreciation, if any, and that no provision be made for appreciation. It is evident, therefore, in view of the rising cost of real estate during the past two years, that the figures which follow under-value the premises to a certain degree:—

	1917.	1918.	1919.	1920.
January . . . . .	\$49,317,635	\$51,716,972	\$52,801,507	\$56,500,232
February . . . . .	49,620,189	51,897,132	53,005,275	57,207,547
March . . . . .	49,967,832	52,288,725	53,317,835	57,946,975
April . . . . .	49,980,909	52,313,874	54,443,467	56,317,655
May . . . . .	50,134,753	52,501,581	53,898,884	56,450,647
June . . . . .	50,450,150	52,705,885	54,315,064	57,192,011
July . . . . .	50,577,670	52,854,634	54,667,642	57,896,005
August . . . . .	50,725,312	53,339,467	56,014,766	58,554,076
September . . . . .	51,158,669	53,268,463	55,464,363	59,297,890
October . . . . .	61,107,191	53,009,741	55,602,824	60,125,795
November . . . . .	50,850,974	52,547,327	55,518,536	—
December . . . . .	61,484,636	62,560,835	65,944,018	—

#### MONTREAL AND QUEBEC SAVINGS INSTITUTIONS

That the Montreal City and District Savings Bank and the Caisse d'Economie Notre Dame, of Quebec, are two important banking institutions in the Dominion, is evident from the figures which are given below. Their business is chiefly with the French-Canadians of their respective communities and savings deposits constitute the greater part of their liabilities to the public. The Dominion government keeps funds on deposit with them, but during the past year, as in the case of the chartered banks, these balances have been greatly reduced.

The chief investment of these institutions, as will be noticed, is in Canadian municipal securities, although their holdings of other bonds and stock are considerably heavy. Their loans are made largely on bank stocks and other securities, although the former are not very significant.

The trend of notice deposits reflects the prosperity of the communities in which they operate. The quick recovery from the effects of the Victory loan in the fall of 1919 is especially notable, particularly in the case of the Montreal bank.

#### MONTREAL CITY AND DISTRICT SAVINGS BANK

	1919.	Dominion government demand deposits.	Notice deposits.	Loans on securities.	Canadian municipal securities.	Cash.
October . . . . .	\$ 93,599	\$40,253,569	\$7,268,848	\$15,481,022	\$7,017,553

#### BANK LOANS TO DIRECTORS

In the monthly returns to the government, Canadian banks are requested to show the aggregate amount of loans to directors and firms of which they are partners. The figures given below show that the course of these loans during the past three years has not been anything out of the ordinary. Expansion, of course, has taken place as general business activity has increased:—

	1918	1919	1920
January . . . . .	\$8,282,811	\$8,412,352	\$10,193,668
February . . . . .	8,124,358	8,935,094	10,486,347
March . . . . .	9,490,098	9,513,529	10,838,430
April . . . . .	8,004,424	9,274,523	11,192,329
May . . . . .	7,967,892	7,919,869	10,753,595
June . . . . .	8,015,622	7,275,448	10,506,652
July . . . . .	7,642,280	8,645,725	10,408,321
August . . . . .	7,544,298	8,545,891	10,514,251
September . . . . .	7,227,344	9,135,518	9,641,328
October . . . . .	7,329,893	8,837,140	9,951,009
November . . . . .	8,749,377	10,742,309	—
December . . . . .	9,021,436	9,573,924	—

# BANK OF NEW ZEALAND

ESTABLISHED in 1861

Bankers to the Government of New Zealand, which holds Preference Shares in the Bank for \$3,649,875, and guarantees its Redeemable Stock \$2,579,186.

# Leading Bankers Forecasted Tightening of Credit

Views Expressed During Past Year Urged Caution, with Leaning Towards Pessimism as to Business Outlook—Sir Frederick Williams-Taylor on Loans and Deposits—No Desire for Violent Exchange Fluctuations—Great Need for Public and Private Economy

CANADIAN bankers, from the beginning of 1920, took a stand on the side of caution. This view they carried into effect by a gradual restriction of credit, which action was not altogether voluntary on their part because of the fact that it would have been quite impossible to meet the demands for money without causing over-inflation and danger to the banks themselves and business organization as a whole. The figures of banking for the year, shown elsewhere in this issue, illustrate how this policy was put into effect.

Representative opinions of bankers, expressed for the most part at the annual meetings, are given below. These opinions indicate the line of action followed by the banks during the year.

## No Extra Profit in Exchange

H. B. Shaw, general manager of the Union Bank, at the annual meeting on January 7, 1920:—

"No permanent relief can be expected until the nations of the world get together, without greed or selfish motives, and in a frank and fearless manner face existing conditions. The United States might very properly be expected to take the lead. As far as we in Canada are concerned, time, production and thrift are the only possible solvents. Exporters and importers should not open credits or engage in contracts without exercising the utmost caution. Inflation of the various currencies has caused exchange to become a most important question. An erroneous idea prevails that the banks are responsible for and making large profits out of the present situation. This is, indeed, incorrect; the banks derive no extra profits as the result of the heavy fluctuations in exchange. We shall, indeed, welcome a return to normal conditions."

## Time for Production

Sir Herbert S. Holt, president, Royal Bank of Canada, at the annual meeting, January 8, 1920:—

"During the year just passed Canada has again proved her ability to meet every emergency as it arises. Our soldiers have been absorbed into civil life without strain, our industries have been readjusted with little unemployment, and the unflinching response of our people to every patriotic call has been shown by the immense over-subscription to the last Victory Loan. Despite an unfavorable harvest in some parts of the west, the country is prosperous and the balance of trade continues largely in our favor.

"Factors which have contributed to the prevailing high prices are being gradually eliminated. Ocean transportation service will soon far exceed that of the pre-war period and stores which have accumulated in distant lands will, as a result, become readily available. Industrial plants have multiplied and everywhere an army of women workers has been added to the ranks of labor. Moreover, Europe can only ultimately pay its huge debts by a corresponding output of goods. We shall then enter upon an era of greater supplies and keen competition. If prices fall in the future, as seems probable, each dollar made and saved to-day will then have greater purchasing power. We should, therefore, strive to produce to the limit of our capacity while markets are high, and exercise the most rigid economy in order that our gains may be conserved.

"The government is still discharging some of the heavy obligations arising out of the war and the net public debt now fast approaches two billion dollars. There are only two ways of meeting this responsibility—greater industry and less extravagance—prosperity is not unending or national borrowing power unlimited. It is an unvarying economic law of which we in Canada had a bitter experience following the Civil War—that all conflicts terminate in a period of prosperity and inflation during reconstruction, which is succeeded by equal

or greater depression. For this inevitable reaction in the future we should now be prepared, and it is the duty of the government to set an example to the nation by abstaining from all unnecessary or wasteful expenditure. It cannot be too strongly urged or too often repeated that the greatest possible effort must be put forth in every direction if we are to meet the amount required for interest and the redemption of debt. It has been aptly said that governments have no income outside that of the people, and that the wealth of a country, like that of an individual, can only be built up by spending less than is earned.

## A Year of Surprises

Sir Edmund Walker, president of the Canadian Bank of Commerce, at the annual meeting on January 13, 1920:—

"The difficulties of reconstruction after the great war are even greater than we feared. The whole world is feeling the effect of four years in which the ordinary work and economics of life were not merely neglected, but the basis thereof was almost swept away. We are short of almost every commodity, the strongest evidence of this being the fact that millions of people in Europe face actual starvation. We cannot re-establish the normal supply of commodities except by working harder than usual, and we cannot lessen the terrible strain of high prices without doing the extra work which will put an end to the lack of commodities. We cannot adjust prices without also bringing about a contraction in the volume of paper money and other instruments of credit, and so far as it is possible to enforce contraction without interfering with the production of what is really necessary, the reduction of prices will be facilitated. In a word, bankers should not aid speculation or assist ventures which do not directly lead to production. We are still building ships with feverish haste throughout the world, and we ought to be spending large sums on railroads in order that commodities may be freely distributed. The present cost of ocean transportation, quite as much as the cost of goods at the primary markets, stands like a huge barrier across the pathway of return to normal conditions. What is worse, however, is that even present prices, in the natural order of things, will go on rising until the lack in the world's supply of commodities has been filled, and there has been a large contraction in the volume of paper money now in existence."

## Need for Government Economy

W. G. Gooderham, president, Bank of Toronto, at the annual meeting, January 14, 1920:—

"The indebtedness of the country has now reached an amount that will prove a heavy burden for our present population. So long as the war existed and such tremendous issues were at stake, no sacrifice was too great to be taken in supporting the government in their defence of the empire, but the time has come when the best energies of the administration must be directed towards reducing expenditure in every direction. No new indebtedness should be incurred excepting such as will have the direct effect of increasing production, or for such enterprises as will return sufficient revenue to fully justify the expenditure. Every new demand upon the treasury should be tested by these requirements, and every effort should be made to lessen in every way the country's expenditure.

"Upon the amount of our production depends the amount and value of our exports, and to the increase of our exports we must look for the means whereby we can comfortably carry the burden of interest on our national debt. There is no country that can look forward with greater hope and confidence than Canada. We have immense potential resources,

# How Do I Make a Will?

FIRST—Decide how you wish to divide your property.

SECOND—Decide upon a competent, responsible Executor to carry out the provisions of your Will.

THIRD—Have your wishes put in correct legal form by your solicitor.

FOURTH—Name the Union Trust Company to act as Executor and Trustee under your Will. We have an enviable reputation for painstaking, prompt and economical settlement of estates—the result of long study and experience, and a determination to serve well those who do business with us.

*We welcome a confidential interview*

and the development of them is certain to take place. It may take time — perhaps it is better that we should grow steadily rather than rapidly, but our future is certain to be a bright one."

#### Recent Prosperity Was Not Sound

H. A. Richardson, general manager of the Bank of Nova Scotia, at the annual meeting on January 28, 1920:—

"During the past year conditions generally have been a good deal confused, and while prosperity has been fairly general throughout Canada, it has been of a somewhat feverish character, for there is the knowledge that it is based to a considerable extent on inflation. Similar conditions prevail in the United States, where speculation in commodities and real estate, in addition to the somewhat common speculation in shares on Wall Street, has resulted in a considerable strain on floating credit. Foreign trade has been hampered by abnormal exchange rates, labor has been unsettled and the operation of most businesses has been attended by considerable anxiety. The press and the platform have teemed with theories for the amelioration of the conditions confronting us, and we have had what seems ample time to consider all academic remedies for the disposal of this aftermath of the war. We should, therefore, without further loss of time, get down to honest, hard work which, after all, is the real panacea for our present troubles. If each and every person would give a good account of himself in that respect, it must follow that efficiency would obtain throughout our land, with the result that, through increased production, the process of deflation would forthwith begin, and we would then, year by year, find our national debt being gradually absorbed and liquidated — for that overhanging debt and the further needs of the government are in fact the outstanding matters of vital importance to all of us, as we shall more fully realize a little later on. It seems impossible that any one should fail to recognize personal responsibility in connection with the financial obligations of our country. The debt was incurred to carry us safely through the war, and it is only by individual effort that it can be borne and finally liquidated. The matter is personal to every citizen of Canada. It is therefore essential that work and increased production be undertaken and persisted in, and that personal and public expenditure be scrupulously kept down to the last dollar. It would seem advisable, rather than lay down maxims for others, that each individual, and particularly those responsible for the management of each business enterprise, make certain that the work entrusted to him and those under him is performed with the maximum of efficiency. Given that, we shall gradually work back to normal conditions; failing it, we are heading for serious trouble."

#### Widespread Rise in Prices

J. P. Bell, general manager of the Bank of Hamilton, at the annual meeting on April 19, 1920, referred to the rise in prices as world-wide, rather than local, and gave as some of the causes the excessive issue of government bonds and note circulation, the insistent and increasing demand for goods, accompanied by disorganized and decreased production and excessive taxes. Money being only a shadow of the substance represented by commodities, the decrease in the production of commodities has resulted in an increase in their price. He then referred to the excess profits tax, and the heavy surtaxes on the income tax, as a paralyzing element so far as the trade of the country is concerned, and said that some other means should be found of raising the revenue necessary to pay the interest and gradually retire our war debts. The taxes made it necessary for the price to be raised by each man through whose hands the goods passed in order to realize cash to cover his own taxes, a cumulative burden which would inevitably result in a reaction in trade and restricted production, or demands for credit which would be a dangerous strain on the finances of the country, and which would prevent the natural increase in capital needed for new enterprises and growing business, excessive taxation being, therefore, a large concomitant of the high cost of living and the prevailing discontent. It would be necessary to speed up production and to produce more of the necessities of life, both on the farm and

in the factory. At a time when more work and more goods should be the watchword, everyone seemed to be trying to obtain more leisure.

#### Room for More Population

G. T. Somers, president, Sterling Bank, at the annual meeting on May 18, 1920:—

"While there is a good deal of talk and general unrest, I have no fear as to the future prosperity of this country. There is a good and comfortable living to be made here for everyone. I believe we have a sound and contented population whose judgment in the end will lead them to safe conclusions, and govern their acts wisely. What we need most now, which I emphasized before the war, is 'increased population of a desirable type' to develop our resources and increase our production."

#### Conditions Very Uncertain

Peleg Howland, president, Imperial Bank, at the annual meeting, May 26, 1920:—

"It is hoped and believed that we will do well during the coming year, but there was never a time in my recollection when conditions were so uncertain, and when it was so difficult to form an opinion, satisfactory at least to oneself, as to what may be in store for us. Here is the situation in Canada as it appears to me: Large government expenditures have been sanctioned by parliament; outlays on the acquired railroads must be made; public works, though curtailed, have not ceased. Our pulp and paper industries have expanded enormously, and are continuing their growth. There is demand for lumber at extraordinary prices, and efforts are being made to supply it. The manufacturers of nearly all kinds of goods, with the exception of those making some lines of clothing, including silks and boots and shoes, are as busy as labor, power and transportation conditions will permit. Good returns are promised from our fruits, furs, fish and minerals. Immigration has increased, the numbers being some 57,000 in 1918-19, and 117,000 in 1919-20. There is investment of United States funds in Canadian securities, industries and timber limits; wages continue high, with indications that they have not reached the limit, and there is an almost unlimited demand for housing at any cost.

"Against all this we have the comparatively small residue of crop left over from last year, the long, severe winter, which has delayed seeding and prevented the proper preparation of the soil, with consequent reduced acreage and adverse chances of good crops (although recent advices from the northwest would indicate that the excellent conditions as to moisture may go a long way to offset other drawbacks); the loss of cattle and horses in the northwest from the severity of the winter and the shortage of feed; the poor condition of those remaining; the curtailment in the number of hogs because of the cost of production; the continued increase in the amount of our imports and the decrease in our exports (in the months of March and April the balance of trade was actually against us); the growing public debt and the increasing burden of taxation, municipal, provincial and Dominion; governmental restrictions and interference with the natural course of trade — for governmental efforts to provide liberally for the weak, the needy and the helpless, while at the same time curtailing or restricting the amount of labor or effort, which should be greater if help of this kind is to be provided. Put the favorable against the unfavorable, and judge for yourselves.

#### Selective Curtailment of Credit

D. C. Macarow, general manager of the Merchants Bank, at the annual meeting on June 2, 1920:—

"The demand for borrowed capital continues to be more or less importunate, and it is in the conservation of credit and the equitable rationing of it that banks can play, and indeed are playing, a sound constructive role. Legitimate productive enterprises are being fostered and encouraged fairly, while at the same time a firmly restraining hand is held upon unproductive, non-essential and speculative undertakings. This policy of selective curtailment, so to put it, operating as it does at the very root of existing evils, and applied with due judgment, discrimination and consistency, cannot but prove a bene-

## NATIONAL PRIDE

Every true Canadian is proud of Canada's financial, commercial and industrial progress.

Carry this same spirit into your personal business affairs and make it a matter of further pride to have The Toronto General Trusts Corporation—Canada's Oldest Trust Company—as the Executor and Trustee of your Will.

This Corporation offers to its clients the benefits of long years of experience in the varying duties of executorship and trusteeship, and has a record for the successful management of estates of every kind and size.

Consult us to-day regarding your Will.

Friendly counsel gladly given.

ficial corrective and an importantly contributing factor toward restoring, with a minimum of dislocation and disturbance, healthy and normal conditions in the body politic.

"I might here venture to say that it is a matter of gratification to see our mercantile marine growing apace and to know that the government will have, it is understood, some 45 merchant vessels in commission by the end of July next. I mentioned last year, and I reaffirm the opinion then expressed, that there is nothing of greater national importance than the establishment of our own lines of ocean transport, and what has been and is being accomplished in this direction, both by the government and by private enterprise, augurs well for the future safety and stability of the country's trade and commerce.

"After what looked like in some respects an ominous start the crop situation throughout the country now seems to justify the belief that good yields will be secured this year. Predictions, however, are futile, and we can only nurse the hope that actual results will fairly measure up to present optimistic estimates. Certainly, on the theory of averages alone, we are entitled to look for some redress in the crop situation this year. Much depends upon it, more especially in view of the disappointing results of the last two years, and if nature is benevolent in the coming harvest, this country will benefit to an unmeasured extent, and we shall be reasonably in a position to view the period of deflation, upon the threshold of which we stand, with feelings of confidence as to our immediate future—as to our ultimate future there need be no misgiving, for it must be borne in mind that Canada is a young and virile country of almost limitless possibilities and immense natural resources awaiting development; that its manhood is strong, enterprising, thoughtful and sane."

#### Gradual Deflation

R. Audette, president, La Banque National, at the annual meeting on June 9, 1920:—

"We believe that this year will see a diminution in the advances made to the public and that prudence will oblige the banks to curtail and choose more carefully the operations in which they will interest themselves. The facilities which have been offered by the government during the war will grow less; the banks who have borrowed will have to reimburse, and this will allow the government to withdraw a good proportion of its paper and, to a great extent, re-establish the gold basis it had before the war. However, this should not be done at the expense of production. It is evident that, if the government collects its loans too suddenly and obliges the banks to hamper production, it will cause a greater evil; as, if by such a line of conduct, our exports with the United States decrease and our imports are the same, our money, which, in relation to the United States, was worth 10 per cent. to 15 per cent. all the year less than theirs, will be worth still less, whatever the gold guarantee the government may have for its paper. What is wanted for the welfare of Canada is to import only what is strictly wanted, not to accumulate any goods for speculation, especially necessities of life. We must produce and produce still more, so that the balance of trade will be in our favor."

#### Effects of New Taxes

H. J. Daly, president, Home Bank, at the annual meeting, June 29, 1920:—

"There probably will be some temporary setback to business through the levy of taxes under the new budget. The difficulties of framing this measure of taxation are generally appreciated, as is evidenced in the willingness of business interests to meet conditions brought about by the application of the new levy. The national debt is there, to be paid off as expeditiously as may be accomplished without disturbing the accustomed channels of industry and trade. Exports and production cannot be taxed. The presumption is that the tax may be raised from what the people can comfortably spare and what may be added to the overhead charges of the manufacturing and trade without hindering activity in these spheres. The budget aims in these directions and will in all likelihood be ultimately brought to operate equitably in the minor features of its detail."

#### Adverse Trade Balance

Tancrede Bienvenu, general manager of the Banque Provinciale du Canada, at the annual meeting on August 11, 1920:—

"The balance of trade with the United States this year shows a heavy deficit against our country. We are convinced that it is the imperative duty of Canada to reform its position in this regard, for such an adverse balance is without doubt the first cause of the depreciation of our currency in the United States. An intense utilization of all our resources, economy and production to the utmost extent, and most important of all, restrictions in importation of luxuries, will facilitate the task to which of necessity conditions of the present time oblige us."

#### Deposits Fail to Keep Up

William Molson Macpherson, president of the Molsons Bank, at the annual meeting on November 2:—

"The deposits of the Canadian public in the chartered banks of Canada show an increase for the year of \$70,000,000, but the bank loans in Canada have increased by \$360,000,000. This justifies the banks in their present policy of restricting loans. You are doubtless aware that for the past four or five years the Canadian banks have supplied their customers with the necessary funds to conduct their business with little, if any, increase in discount rates, and our customers at the present time are discounting their bills at lower rates than can be obtained in Great Britain or the United States. We are sure that the Canadian public must value the steady money market they have enjoyed all through these troublesome times.

"The period of falling prices has begun and provided the drop is gradual and not violent, our people should be able to meet the changing conditions without difficulty. Most of our manufacturing and trading firms have prospered so well during the past few years that they are in a good financial condition to meet a period of readjustment without embarrassment.

#### Comparison With United States

Sir Frederick Williams-Taylor, general manager of the Bank of Montreal, at the annual meeting on December 5:—

"As comparisons are constantly made between Canada and the United States, owing to general similarity in conditions, one anomaly attracts attention, viz.: that with credit restriction as acute here as it is across the line, the price of money is materially lower in the Dominion.

"This condition, in days of world-wide high interest rates, has attracted much attention in other countries and is regarded as a tribute to Canada's good banking system. The one disadvantage of this cheap money condition is that persons on fixed incomes derived from investments face the higher cost of living, including income tax, with little increase in revenue.

"With reference to current loans in Canada, your Directors have felt impelled for many months past, in the Bank's and the country's best interests, to follow the policy found essential in every other country, and keep within bounds our advances to merchants and manufacturers. This policy is in accordance with the views of the Dominion Government and has been followed, more or less closely, by all Canadian banks.

"Naturally enough, exception has been taken in certain quarters to such restrictions, but, as a rule, our customers have recognized the necessity of checking over-trading and further expansion in such times as we are now facing. There has never been a period in our experience when requests for advances for purposes out of the ordinary have been so numerous.

"It is safe to say that had credit been granted freely and banking resources become tied up, a serious condition would have resulted in this country. Already the tide has turned and many of our friends now frankly admit the danger of the undue expansion so much in evidence a few months ago. We are convinced that the business of Canada is in a safer and sounder position to-day in consequence of a judicious credit restriction."

## BANKING INFORMATION

During the six months ending Dec. 31st, 1920, The Monetary Times of Canada published no fewer than forty-three (43) different articles that were of direct and vital concern to the practical banker. This was exclusive of banking statistics, clearing house returns, branch bank notes, etc.

In addition, each issue contained a great volume of information on investments, insurance (all classes), all of which have interest for those concerned with the direction of banking activities.

The subscription price of The Monetary Times (including The Monetary Times Annual) is \$3.00 a year postpaid.

# Recent Legal Decisions on Canadian Banking

Sections 77, 90 and 176 Interpreted During Past Year—Bank Must Ascertain Agent's Authority—No Authority to Guarantee Payment to Third Party—Drawer of Draft Personally Liable for Misrepresentation in Bank Should Have Advised of Privileged Lien on Its Own Stock

**UNCERTAINTY** as to the meaning of certain sections of the Canadian Bank Act have again brought banking questions into the higher courts of this country. The sections on which the most important decisions were made this year were sections 176, 90 and 77.

## King vs. Royal Bank

In the case of the King vs. Royal Bank of Canada the Manitoba Court of Appeal held that the burden of proving the authority of a government agent to receive payment of a cheque, drawn on a certain bank, payable to "Dominion Government Elevator Company," rested upon that bank.

The action was brought on a cheque for \$673.68 drawn by Woodward & Co., grain merchants, on the Grain Exchange branch of the Royal Bank of Canada, in favor of "Dominion Government Elevator Company." The words "Canadian Government Elevator" were stamped on the back of the cheque with a rubber stamp, and underneath those words there was written "Per F. S. Burgess." The cheque in question was given in payment of charges due from Woodward & Co. to the Dominion government in connection with wheat received and stored at the terminal elevator at Port Arthur. It was claimed that the proceeds of the cheque were improperly paid by the bank to O. S. Burgess, who was in charge of the Dominion government elevator business at Winnipeg, and who kept the money for his own use. The duty of Burgess to make deposit of all funds received by him was not only specifically set forth to him in written instructions, but was statutory, and he had no authority to expend any money for any purpose whatever.

## Bank Assumed Too Much

In giving judgment against the bank the court said: "The actual authority of Burgess is determined by the letters and oral instructions referred to. He was authorized to take cheques or money in exchange for warehouse receipts and to make deposits to the credit of the Receiver-General. Without any express representation being made, the bank teller assumed that Burgess was the manager of a grain company, with full powers as such. In this the teller was clearly negligent. Moreover, the endorsement, 'Canadian Government Elevator, per F. S. Burgess,' was direct notice that the cheque was being negotiated, not by the owner but by an agent 'per proc.' By section 51 of the Bills of Exchange Act a signature by procuration operates as notice that the agent has but limited authority to sign, and the principal is bound by such signature only if the agent in so signing was acting within the actual limits of his authority. In this case the endorsement, 'Per F. S. Burgess,' was sufficient to put the bank upon enquiry as to the agent's authority. Upon the whole case, I am of opinion that the defendant bank has failed to establish the agency of Burgess, actual or ostensible, to receive this sum of money over their counter, and has failed to show that it acquired any title to the cheque in question by means of a valid endorsement."

## Merchants Bank vs. Stevens

In the next notable case, that of the Merchants Bank vs. Stevens, the question came up as to whether a bank could guarantee the payment of a debt due a third party, the Manitoba Court of Appeal distinctly holding (1) that a letter written on the bank's stationery and signed by the bank manager to guarantee the payment of a debt due a third party was not binding upon the bank, and (2) that the bank manager had no authority to give such a guarantee, and in doing so was not acting within the scope of his employment.

Briefly, the facts of the case were that the Winnipeg Motor Exchange Company, an unincorporated company, had

been in operation in Winnipeg, and in the course of its business the company became largely indebted to the Merchants Bank, the account being kept at the main branch, which was under the management of one Paterson. In August, 1917, the company's indebtedness to the bank amounted to about \$40,000, which amount Paterson was ordered by the general manager to reduce, but to which order he paid no attention. During the same month Paterson was instrumental in obtaining a sale of the business, the bank advancing \$5,000, and the name of the company being changed to the Winnipeg Motor Company. As far as the bank was concerned, no improvement resulted, and Paterson continued initialing post-dated cheques to aid the company in securing further loans. On October 8th, 1917, the company negotiated a loan with Stevens, the respondent, for \$10,000, to be paid in four installments. As security for the repayment of the loan the company gave to Stevens four post-dated cheques on the defendant bank, bearing the dates of the installments and for corresponding amounts. Paterson placed his initials on the lower left-hand corner of each cheque. He also signed and gave to Stevens the following letter: "In connection with the loan of \$10,000, which we understand you are granting to the Winnipeg Motor Company, to be repaid, and etc., we beg to notify you that this bank is prepared to grant the company a credit sufficiently large to enable them to take up these installments as they mature and hereby guarantees the payment of the said loan." The money received from Stevens was deposited to the credit of the company in its ordinary chequing account in the bank.

The bank refused payment of the cheques and Stevens then brought action to enforce payment.

## No Guaranteeing Power in Bank Act

In the decision the court said: "Apart from the question of ratification, the real point involved in this appeal is the power of the bank to give the guarantee. The powers which a bank may exercise are set out in section 176 and following sections of the Bank Act. No power to give guarantees is specifically given by the Bank Act. Any such power must be derived by necessary implication from the words of the act. The only words in the act which can possibly be appealed to are the words in section 76, subsection 1 (d): "Engage in and carry on such business generally as appertains to the business of banking." The question then is whether these words by necessary implication give the bank power to guarantee the repayment of a loan by a third party to a customer of the bank. When it is remembered that the bank itself is given specific power to loan money, and that the loaning of money to its customers is in fact its chief business, it is difficult to discover any ground for implying a power to guarantee the repayment of loans made by others. It was argued that representations made by the agent, even if fraudulent, bind the principal, and, as a rule, this is the law. But it is impossible in my opinion to rely upon the verbal promises of the manager when the contract has been reduced to writing in the form of a letter. Even if they could be relied upon, the plaintiff once again returns to the position of seeking to enforce a guarantee, verbal this time, made by the manager as agent for the bank which had no power to enter into it. From this standpoint there can be no ratification of the manager's action, for there can be no ratification of any ultra vires contract.

"In my view, the giving of the guarantee or undertaking in his case was unauthorized by the Bank Act, and that disposes of the whole case."

## Bank of Nova Scotia vs. Hatfield

Another case, which dealt with section 90 of the Bank Act, was that of Bank of Nova Scotia vs. Hatfield, which arose out

of the acceptance by Hatfield and the discounting by the bank of a certain draft, and an action commenced in 1918 in regard to the matter had been dismissed, but "without prejudice, however, to any action which might be taken by the plaintiff against any person or persons whatever on or in respect of the bill of exchange sued on." This action was then brought by the bank against Hatfield as acceptor.

The facts of the case were that the firm of Hatfield & Scott of New Brunswick and Montreal had made arrangements to buy carloads of apples from Edward Harrison of Kentville, N.S., to be paid by drafts drawn by Harrison, and to which the bills of lading were to be attached. On December 8th, 1917, Hatfield and Harrison called upon the agent of the Bank of Nova Scotia, and the agent of the bank said he filled in the date in a form of draft and also the words "at sight." Harrison signed the draft as drawn and Hatfield accepted the draft as it then was by writing at the foot of the draft, "O.K., Hatfield & Scott Co., Ltd., per H. H. Hatfield," and the draft was afterwards filled in for the sum of \$927.50, the draft being drawn on Hatfield & Scott, Ltd., Montreal. The draft was discounted by the Bank of Nova Scotia and the proceeds placed to the credit of Edward Harrison. The evidence further showed that although Hatfield & Scott had applied for incorporation, they had not at the time received their letters of incorporation, but believed in the interval they were an incorporated company. Further, the evidence showed that Hatfield had not been legally authorized by the company (which in reality did not at the time exist) to act as its agent, but that he did so.

#### Decision of the Court

In deciding the case Mr. Justice Chandler says: "Considering that Hatfield knew when he accepted the draft sued on that it was to be used immediately in order to put Edward Harrison in funds, and that it was absolutely useless and futile for Hatfield to accept the draft if the draft was not to be valid or used until a bill of lading for a carload of apples was attached to it, and that this particular draft was discounted by the bank and the proceeds placed to the credit of Edward Harrison's account on December 10, 1917, I have come to the conclusion that the draft was not accepted by Hatfield conditionally, as contended by him. If a draft was not to be used—that is, discounted by the bank—until a bill of lading for apples was attached to it, what was the use of Hatfield's acceptance? In the course of business between Edward Harrison and Hatfield & Scott prior to this date, any drafts drawn by Harrison on Hatfield & Scott Co., Ltd., to which bills of lading were attached, were paid by Hatfield & Scott at Montreal on presentation, and if this particular draft was to be held until a bill of lading was attached to it in order to secure payment, all that took place between Hatfield and the bank's agent when this draft was in part prepared and accepted by Hatfield amounts to nothing whatever, and has no effect.

"If, as stated by Hatfield, the bank manager had waited until Harrison had brought in a bill of lading to be attached to the draft accepted by Hatfield before sending it forward for payment, the bank would have lost the benefit of the bill of lading as security for the payment of the draft. Section 90 of the Bank Act provides that the bank shall not acquire or hold any warehouse receipt or bill of lading or any such security as aforesaid to secure the payment of any bill, note, draft or liability unless such bill, note, etc., is negotiated or contracted at the time of the acquisition thereof by the bank. If the manager of the bank had acted as Hatfield claims he agreed to do, the bank would have lost the security of the bill of lading as the draft accepted by Hatfield was negotiated or discounted on December 10th, at which time admittedly there was no bill of lading available to be attached to the draft and to secure its payment. It is unlikely that the manager had altogether overlooked the provisions of section 90 of the Bank Act in connection with this transaction.

"I think that the defendant Hatfield is liable by reason of his representation that he had authority to accept the draft sued upon as agent for Hatfield & Scott Co., Ltd., and that by his conduct he warranted that he had such authority. Though Hatfield does not seem to have been aware of the fact at the

time, there was no such corporation as Hatfield & Scott Co., Ltd., in existence on the date when the draft sued on was accepted, but the ignorance of Hatfield on this point does not affect his liability."

#### Lazard Bros. vs. Union Bank

The next case dealing with the Bank Act was that of Lazard Bros. vs. Union Bank of Canada, which came under section 77 of the act. The facts of the case were that the late E. E. A. Duvernet, having arranged with Lazard Bros. of London for a loan, promised to deposit with the Union Trust Company, as trustee for Lazard Bros., 500 shares of the Union Bank and 500 shares of the Union Trust Company as security. The dispute arose over the ownership of 200 shares of the Union Bank which were held in trust for Lazard Bros. by means of a stock certificate. The bank claimed ownership of the shares in question because of a debt owing it by Duvernet, and because of section 77 of the Bank Act, which provides: "The bank shall have a privileged lien for any debt or liability to the bank on the shares of its own capital stock and on any unpaid dividends of the debtor or person liable, and may decline to allow any transfer of the shares of such debtor or person until the debt is paid."

The bank officials knew all the details of the loan by Lazard Bros. and the security on which the loan was made. Knowing these facts, and knowing of their lien on Duvernet's shares, which Duvernet was pledging as his own absolutely, the bank should have notified Lazard Bros.

His Lordship in deciding the case said in part: "Before discussing the law I would point out that the certificate deposited with the Union Trust Company afforded no protection to the plaintiffs. It in no way represented the shares. It was a mere statement that at its date the shares were standing in the name of Duvernet. The power of attorney would enable the holder to make a transfer on the books of the bank, but there was nothing to prevent Duvernet from dealing with the stock in the meantime. The production or surrender of the certificate was not necessary to the transfer of the stock and there was nothing to prevent the issue of any number of certificates, each stating the same fact, that Duvernet's name appeared upon the register as the holder of so many shares.

"In this case I have no hesitation in finding that there was a duty upon the part of the bank to disclose its lien, and that failure to disclose was fraudulent in the sense that it was intended to allow the plaintiffs to assume the liability incident to the acceptance of the bills without the security they thought they had."

#### LETTERS OF CREDIT AN INDISPENSABLE CONVENIENCE

Previous to 1917, letters of credit issued by Canadian banks were not used very extensively because the convenience afforded was not sufficient. To-day, however, this facility is found to be practically indispensable by the importing Canadian and the business man travelling abroad. Letters of credit issued by Canadian banks are recognized in practically all the important centres of the world, because of the banks' extensive connections. It will be seen from the following figures, which have been taken from the monthly bank statement under the heading of "liabilities of customers under letters of credit," how the use of this facility has grown. The figures also reflex, to some extent, the development of our foreign trade:—

	1917.	1918.	1919.	1920.
January	\$ 9,377,150	\$20,781,228	\$33,698,468	\$47,967,989

# Trade Situation Explains Exchange Dislocation

War Time Trade and Currency Difficulties Have Thrown Settlement Machinery Out of Gear—Foreign Exchange Dealings in Canada, and Methods of Calculating Different Rates—Bank is the Dealer, Fixing Rate to Adjust Supply and Demand

By A. B. BARKER

**M**ONEY has been defined as a commodity which mankind accepts in exchange for other commodities and services. Many substances have been used as money, but gold and silver have gradually supplanted all other commodities owing to their peculiar adaptability for use as media of exchange, and to-day gold is accepted by the nations of the world as the basic measure of monetary value.

The early coins were simply lumps of metal, with a mark certifying the weight of metal stamped on them by a hammer, and this is all that the coins of to-day indicate. In coining money no government guarantees the value, but merely the weight and fineness of the metal in the coin. The government declares what shall be legal tender in the payment of debts within its jurisdiction, but the real value and standing of the coins depend entirely on the willingness of the inhabitants to accept them in exchange for goods and services.

Gold being the common standard, and silver used only in the subsidiary coinage, all prices are quoted in turns by gold.

## Goods Exchanged for Goods

Trade, whether by barter, as in primitive times, or through the present three-cornered system by the intermediary of money or credit, consists in the exchange of goods for other goods. The use of money as an intermediary merely facilitates the exchange by permitting the division into smaller and more convenient units. One of the arguments often heard is that by dealing at home the money is "saved," but money is not the one thing for which trade is carried on. Men sell commodities to dealers for money, and this money is turned over for the purchase of other goods, but in the final analysis it all comes back to the exchange of goods for other goods, or for services. Money, to be of use, must be used as it is intended, a measure of value and a medium of exchange. As Ben Johnson once said: "Money, to be sure, of itself is of no use, for its only use is to part with it."

As trade increased, it was found that these exchanges could more easily be arranged by means of credits, which would, more or less, cancel each other, only the final balances being settled in gold, and the degree of civilization to which a country has attained may be largely measured by the perfection of its machinery for handling these credits.

These credits are exchange, and exchange, domestic or foreign, is in reality a commodity in the same sense that pork, or molasses, are commodities. Like them, it is a manufactured product, may be bought and sold on the market, and is subject to the same law of supply and demand.

## Exchange is Result of Trade

Exchange is produced by trade in commodities. If a shoe manufacturer in Quebec ships his wares to a wholesaler in Toronto, a debt is created in his favor from the wholesaler, and this debt is exchange, domestic exchange, as both parties live in the same country. This debt is payable in the legal tender of Canada. Until the debt is paid it belongs to the manufacturer, and he may sell it, or dispose of it as he will. The usual course is for the manufacturer to draw a draft for the amount of the debt on the Toronto wholesaler, and discount it with his bank in Quebec—i.e., he sells the draft to the bank, which then becomes the owner of so much Toronto exchange, or funds. These funds, or exchange, the bank in turn sells to some one who has a debt to pay in Toronto, or it may hold the amount in Toronto, and lend it to a customer of its branch in that city.

Foreign exchange is produced through the sale of commodities by an inhabitant of one country to an inhabitant of another country. Countries do not trade with countries as such. Trade is entirely between individuals. Foreign exchange is slightly more complicated than the domestic exchange, in that the settlement must be made in gold. The principles are, however, the same. A Canadian exporter ships grain to Liverpool, the result is sterling exchange—i.e., the right to money in Britain, which is made available through the banking systems of Great Britain and Canada, to discharge a debt owing by a Canadian firm importing British goods, the transfers being made by bills of exchange. The sum of similar transactions between two countries may result in a balance due from one to another, and this difference is termed the balance of trade. It is this balance which determines the rate of exchange. Theoretically this difference is payable in gold, and the cost of shipping gold either way will determine the premium, or discount, which the debtor will pay, or the creditor accept, for a bill of exchange, in preference to taking the trouble to ship the actual bullion.

There are other ways of avoiding the shipment of gold between countries, the sale of securities and loans being the chief methods.

The bank's relation to exchange is that of a merchant. It buys and sells exchange in exactly the same way a grocer deals in his wares. It buys, as he does, at wholesale prices, and sells at retail, and its profit depends on the volume of its turnover.

## Pre-War Quotations, Near Par

In pre-war days, when foreign trade was on a normal basis, the exchanges between countries fluctuated within narrow limits, and between Canada and the United States the range varied in large transactions between 1/10 of 1 per cent. above or below par, and for this reason the public generally ceased to look on New York funds as foreign exchange. One result was that the charge made, when a cheque on New York was negotiated, came to be looked on as a commission, and now that these funds rule at a high premium, many still persist in regarding it as a commission, or charge for service. One great reason for the current misunderstanding in the case of New York exchange is that the unit of value—the dollar—is the same in both countries, as is also the statutory gold contents of 25.8 grains 9/10 fine.

In normal times, thanks to our connection with Great Britain, both politically and commercially, we were able to obtain sufficient gold, or, what answered the purpose as well, sterling exchange, to hold our funds at par, or close to it, in New York. Now, however, owing to the change in the financial relations between Great Britain and the United States, the latter country becoming a creditor instead of a debtor nation, our former source of supply has been cut off, for the present at least, and we have to rely on our own resources. The result has been that the adverse balance in favor of the United States has had its natural effect, and our funds are at a discount in that country.

## New York Rate is Important

The current rate for New York funds touches Canadian economic life very closely, as, owing to our geographical position and habits of trade, we are dependent on that centre in all our exchange dealings with Europe, as well as those with China and Japan. Before the war we purchased chiefly from the United States, and our chief exports were to Great Britain, buying from the United States much more than we

# IMPERIAL BANK OF CANADA

Capital Paid Up \$7,000,000

Reserve Fund \$7,500,000

*214 Branches in Canada.*

The Imperial Bank of Canada is a highly specialized organization, providing every modern banking convenience at each of its 214 branches in the Dominion.

Since its establishment, over forty-four years ago, this institution has enlarged its capacities to meet the growing demands following Canada's steady development, and takes pride in the efficiency of its service.

Whether it be in connection with Collections of Drafts, Money Orders, Letters of Credit, Government and Municipal Securities, a Savings Account or a Safety Deposit Box, the special requirement of each individual client receives prompt and accurate fulfilment.

## Our Foreign Affiliations.

While confining the sphere of our direct activities within the borders of the Dominion, we are affiliated with strong banks abroad. Through their co-operation, we are enabled to offer a complete world-wide financial service.

## HEAD OFFICE - TORONTO

sold, and selling to Great Britain much more than we purchased from her. As the United States was then indebted to Great Britain, we were able to transfer our claims against Great Britain to the United States by selling sterling exchange in New York, and with the funds so obtained, settling our debts in the United States. This kept the balances between us normal, and the question of a premium or a discount on our transactions with New York was of comparatively little moment.

Now, however, this is all changed. We still rely on the United States to furnish the bulk of our import requirements, but are unable to settle as formerly by selling sterling in New York, neither can we ship gold, which is the only accepted medium of settlement of balances between nations. This for the good and sufficient reason that we have not the gold to ship. The result is that there is competition in Canada for New York funds, which must be purchased here with Canadian money, and this competition has increased the price of the commodity, so that, at one time, the right to receive \$100 in New York, in funds current there, was worth \$117 in funds current in Canada. At the present time (October, 1920), the premium is 11 per cent.

#### Premium Goes to Canadian Sellers

The essential point to be kept in mind here is that these funds are not purchased from the United States dealer, but from a Canadian who owns the funds. It is he who gets the premium from the Canadian purchaser. All the American receives is the face amount of the invoice. For instance, a Canadian dealer buys American goods to the value of \$1,000 in the United States. The cost to him in Canada, with New York funds at a premium of 11 per cent., will be \$1,110, but all the American seller receives is \$1,000. He gets no benefit from the premium, but the reverse, as it interferes with his trade, making it harder for him to make the sale. As our market for foreign exchange is in New York, this premium must be allowed for in all transactions involving payments abroad. In its final analysis, when we have a payment of, say, £1,000 to make in London, the transaction simply is an exchange of commodities. Suppose sterling in New York is quoted at 3.45 and New York funds here at 11 per cent. premium, the rate for sterling here would be 3.83. The Canadian would purchase, with \$3,830, the right to receive \$3,450 in New York, and with this would buy the right to receive £1,000 in London. Of course the transaction would go through the Canadian bank, and the £1,000 draft would be drawn on its London correspondent, but the bank would have to buy sterling in New York to enable it to accommodate its customer.

For many years the Canadian system of quoting sterling obscured this. Prior to confederation, the legal par of exchange was at the rate of \$4.44 4/9 to the pound sterling, and when this ratio was changed to \$4.86%, as it is to-day, it was found that the new par was 9 1/2 per cent. premium on the former. For some reason unknown at the present time, the system of quoting sterling at a rate of premium per cent. advance on the rate of \$4.44 4/9 was adopted, and, in spite of its absurdity, resisted all efforts to change it. When the war broke out the exchange market became demoralized, and the quotations outran the exchange tables in use, so that dealers were forced to adopt a commonsense method and quote in dollars and cents. In other words, they had to mark the prices of their wares in plain figures.

#### Normal Adjustment Was Simple

In normal times, the adjustment of rates of exchange between countries was a comparatively easy matter, and the course of exchange could be foretold, according to the season, with fair accuracy, but since the war the exchange markets have been thrown out of gear like everything else.

The balances between countries have become so huge that settlement by shipment of gold is utterly impossible, and the systems of adjustment formerly used quite inadequate. Plans are being made for the creation of large credits in the United States, which is at present practically the only

creditor nation, and when these are effective the abnormal exchange situation will correct itself in time.

#### Effect on Customs Rates

When foreign exchange is at a heavy premium, it operates as an increase in the customs tariff on imports. American exchange at a premium of 11 per cent., is equal to an increase of 11 per cent. in the Canadian customs tariff on American goods, and conversely sterling exchange, now quoted at 3.84 in Canada, or a discount of 21 per cent., is equal to a reduction in the Canadian tariff on British goods to this extent. Until recently this was nullified by the customs authorities calculating the import duty on the par of exchange, no matter what the depreciation of the foreign currency. This absurdity was at last realized and partially corrected, so far as importations from any country other than the United States is concerned. American invoices are valued at par and duty collected on that valuation, though in reality the actual value here is greater by the amount of the current premium on New York funds.

Much has been said as to the prospects of foreign trade with Europe after the war, and it will be well to realize the effect of exchange on the export of goods from Canada and the United States, as the discount on foreign funds here will naturally increase the price which the foreigner must pay in his own currency for Canadian goods. Canadian exports to Europe will, for this reason, be materially increased in price to the foreign consumer. For instance, Ontario winter wheat, worth, say, \$2 at shipping points in Canada, which in pre-war days would cost the British buyer 8s. 1 1/2d. a bushel, will, with sterling at a discount of 21 per cent., cost him 10s. 3d. a bushel. Sterling at a discount here means that in Great Britain Canadian funds are at a premium and this premium will have exactly the same effect on the prices of Canadian goods in Britain that the premium on New York funds in Canada has on the price of American goods here. There are countries where British funds are at a premium or at par, and this will impel the British consumer to buy from those countries rather than from Canada.

Trade follows the line of least resistance always. The old slogan that "trade followed the flag" was true, undoubtedly, in normal times, when the only barriers were those deliberately raised by the various countries with the avowed intention of turning trade into certain channels. The war has, however, brought about entirely new conditions, as evidenced by abnormal exchange rates everywhere, and trade at present is adjusting itself to meet them.

#### New York Controls Canadian Rate

The main dealings of Canadians in exchange are with the United States, Great Britain and France, and on the Pacific Coast China and Japan, and with all of these we are dependent on the New York exchange market for rates, as that city is the exchange centre for this continent. Trade in exchange, as in other commodities, follows the line of least resistance, and, as New York is the market where exchange can be most readily bought and sold, transactions naturally are handled there. It is all a question of supply and demand. The trade in exchange is of mutual benefit, just as is trade in other commodities, and unless there is a mutual profit there would be no trading. The essential part of trade is that there shall be mutual consent.

#### Methods of Calculation

The methods of calculation in exchange are simple, if the commodity idea is kept in mind, and the following examples will make it clear:—

#### Sterling Exchange

The par of sterling exchange is \$4.86 2/3 to the pound. At present prices, the pound is quoted at 3.45. The Canadian rate will be the same, plus or minus the premium, or discount, on New York funds in Canada. The premium is, say, 11. per cent., and the Canadian rate for sterling, therefore, would be 3.45 plus 11. per cent. of itself, 3.45 + .37.95. or

CONTRACTORS TO THE GOVERNMENT OF CANADA FOR DOMINION NOTES,  
POSTAGE AND REVENUE STAMPS. ENGRAVERS OF BANK NOTES FOR  
THE CHARTERED BANKS OF CANADA. RAILWAY, CORPORATION AND  
COMPANY BONDS, MUNICIPAL DEBENTURES, STOCK CERTIFICATES,  
LETTERS OF CREDIT, CHEQUES, DRAFTS AND OTHER SECURITIES.

WORK ACCEPTABLE ON ALL STOCK EXCHANGES.

3,8295. These calculations are usually based on £100 as a matter of convenience in the arithmetical work, thus:—

New York rate per £100 .....	345.
Premium on New York funds in Canada 11% .....	37.95
	<hr/>
	382.95

£100 in Canada would be worth \$382.95. The quotation is always made on the single pound, therefore the quotation would be \$3.8295 per pound.

The bulk of sterling transactions are by cable, or by demand, or 60 days' sight bills, and in arriving at the rates for these interest on the demand rate is allowed for, and for bills other than demand or three days' sight and under, the stamp tax of 1s. per £100, or fraction thereof, must be calculated. In figuring the interest, the calculation is made on the demand rate, with three days of grace on all items drawn at any time over demand or sight. The year is taken at 365 days.

Example:

If demand cheque rate is 3.45, what would be the rate for 60 days' sight, New York funds in Canada, 11. per cent. premium.

Premium on New York funds in Canada 11% .....	37.95
New York demand cheque rate .....	345.
	<hr/>
	382.95

Deduct: .....

Stamp tax of 1s. per pound. This is taken as 1/20 of 1% .....	.191
63 days' interest on 382.95 at the open market rate in London, not Bank of England rate, say 6% .....	3.991
382.95 x 6 x 63 .....	3.991
	<hr/>
365 .....	4.182

Canadian rate, 3.7877. .....

This would be the basic rate, or let us say, the wholesale price at which large blocks could be bought and sold between banks. If a bank wanted to make, say, 1/4 of 1 per cent. on the transaction, this would be allowed for before the rate was quoted to the customer, and would work out as follows:—

Premium .....	37.95
New York demand rate .....	345.
	<hr/>
	382.95

Deduct:	382.95
Stamp 1/20 .....	.191
Interest 63 days at 6% .....	3.991
1/4 profit .....	.957
	<hr/>
	5.149

Canadian rate, 3.778. .....

If the bank were selling the bills, the 1/4 per cent. profit would be added to the rate as follows:—

Canadian basic demand rate .....	382.95
Stamps .....	.191
Interest .....	3.991
	<hr/>
	4.182

1/4 profit .....	.957
	<hr/>
	3.225

Canadian rate, 3.797. .....

In normal times, rates for cables are simply the rates for demand cheques, plus the interest on the estimated time which would elapse before a remittance by demand draft could reach London, this depending, of course, on the closing and sailing of mails. Ten days was the time usually allotted in such cases.

Example:

New York demand cheque rate .....	346.
Premium on New York funds 11% .....	38.06
	<hr/>
	384.06

Add:

10 days' interest at open market rate in London, say 6% .....	.64
	<hr/>
	384.70

Canadian cable rate, 3.847.

### French Exchange

French exchange, or, as it is often termed, franc exchange, was formerly in New York and is still in London quoted at so many francs and centimes per foreign unit, pound or dollar. The effect of this was that as the quotation in francs rose the lower became the value of the franc. At par the rate was 5.20—i.e., 5 francs 20 centimes—to the dollar. At this rate the franc was worth 19.3 cents. At present (October, 1920) it is worth about 6½ cents. New York quotations until very recently were in francs per dollar, but now are given, like all other exchange in that market, in dollars and cents per foreign unit. It has been suggested that the basis of quotation shall be 100 francs, and this may possibly be adopted.

In Canada banks have usually quoted in cents per franc, owing to the question of premium or discount on New York funds as the premium or discount must be on the amount of dollars to be paid, not on the francs purchased.

The method of calculating interest on franc exchange differs from sterling in that there are 40 days of grace, and the year is taken at 360 days as in New York. Formerly, the interest was calculated on the par of exchange, 5.20 francs to the dollar, or 19.3 cents per franc, but now, as in sterling, interest is calculated on the active quotation for demand cheques.

The stamp duty on cheques is 10 centimes each, if payable in the town where they are drawn, otherwise 20 centimes. At par this would be 2 and 4 cents, respectively, as the franc contains 100 centimes. The stamp duty on cheques is not considered in exchange calculations. On bills of exchange the stamp duty is 5 centimes per 100 francs, or 1/20 of 1 per cent. For quotation purposes, this is reckoned on the quoted rate.

For instance, under the old system of francs per dollar, the 60-day rate would be worked out as follows:—

Demand cheque rate .....	1540.
Add interest on 1208 60 days at Bank of France rate, say, 7% ..	17.98
Stamp, 1/20 .....	.77
	<hr/>
	1558.75

The rate, therefore, would be 15.58¾ francs per dollar, the calculations being made on the equivalent of \$100 for the sake of convenience.

In this case the interest and stamps would be added in order to reduce the price, as a 60-day bill would be worth less than a demand cheque by the amount of interest and stamps.

Under the present method the rate for 60-day bills is found as follows:—

Demand cheque rate .....	650.
Deduct:	
Interest 60 days at 7% .....	7.583
Stamps, 1/20 .....	.375
	<hr/>
	7.958
	<hr/>
	642.04

The rate would be 6.42 cents per franc.

To find the Canadian rate the premium on New York funds would be added to the New York price, just as it is with sterling. At the present time, however, the question of 60 and 90 day rates for exchange of any kind is largely academic, as, owing to the uncertainty of the exchange markets, practically all remittances abroad are by cable or demand drafts.

# Publicity Methods in the Banking Field

Greater Attention to Advertising Reflects Keener Competition Among Banks—  
Commercial Methods Utilized—Topical Booklets, Monthly Letters, House  
Organs and Street Car Publicity Now Supplement Advertising in Press

By J. H. HODGINS,

Manager, Statistical Department, Union Bank of Canada, Toronto

MEASURABLE progress has been made since the war in the development of bank publicity in this country along more modern lines. In the evolution of newspaper effort, and more specifically publicity and advertising, there is probably no more interesting phase than that which concerns the attitude of Canadian bankers.

For so long our bankers were regarded as ultra-conservatives; for so long a bank "card" represented the consummation of the banker's advertising expression. Our bankers have been among the last of the advertisers seeking extension of business to try out the effectiveness of the "human interest" appeal. The change has come in more or less subtle fashion, but sufficient evidence of real "pep" has already been furnished by Canadian bank advertisements and by various interesting publicity-getting methods of the last year to indicate that our bankers have followed the trend of the times.

## War Effort Pointed the Way

The greatest achievement of modern publicity has been the development and propagation of ideas. Out of the necessities of the war period came the need for vast public borrowing by governments; thrift and production had to be engendered. How was all this accomplished? By propaganda advertising. We have but to look back to be more fully impressed with the gigantic effort that was pushed through to previously undreamed-of successes through the sheer force of publicity and advertising. As an immediate result all advertising effort has taken on an added dignity, an increased value.

It has been demonstrated that bank advertising may remain dignified and yet have a "punch" to it. Similarly, no individual, however grand, sacrifices his "dignity" because he smiles. You are not attracted by a gloomy advertisement but rather to the one that radiates cheer. After all, why should a bank advertisement be more stereotyped in its form than any form of advertisement?

Canada's war loan experiences were the same as England's. Our finance minister had to "sacrifice dignity" and get down to the level of the masses through the popular phases of publicity. A million dollars in cold figures had first to be "interpreted" in terms of bullets before the man on the street caught the real significance of the country's great need.

## Linked With Agriculture

It is given to our banks in their advertising to be constructive, nationally. A great deal may be accomplished toward further driving home the truths of national propaganda, as witnesseth the campaigns carried on by many American financial institutions during the war period, when thrift was paramount, when food conservation was vital. Here in Canada—where the bond between banker and farmer must necessarily be intimate because the country's basic industry is that of the soil—our banks may accomplish much from the agricultural viewpoint. On more progressive lines the banks' campaigns may be directed toward greater production where lower yields threaten, be it in wheat crop or cattle herds. Our banks actually have furnished the financial energy necessary in the growth, transportation and marketing of Canada's vast crops, but our bankers are only now awakening to the need for educating the agriculturists of Canada to a fuller appreciation of the gigantic task which the banks perform for the Canadian farmer from year to year.

Likewise it is given to the banks to direct public thought along the lines of constructive spending.

Bankers are coming to regard advertising and publicity along broad lines. More recent bank advertising in this country has done much to broaden the public's vision of international trade, a factor to which the average Canadian directed but scant thought before the pressure of war production advanced our industrial plant to its present proportions—and has thus enlightened the average citizen as to the future.

Undeniably banking is becoming more and more competitive in Canada. There are only eighteen chartered banking institutions, but these eighteen banks have some 4,800 branches throughout the Dominion, and each and every branch manager knows full well the keen race for business which he must run against competitive managers. The result is a very considerably stimulated publicity programme.

## New York Agencies Take Lead

Probably some of the most progressive methods of publicity which our bankers have employed have been undertaken by the New York agencies of Canadian banks in their effort to make Canada better known throughout the United States. The Union Bank of Canada early initiated an educational campaign, through the issuance of two booklets, "Canada and Its Potentialities," and a little later, "Trade Acceptances: Canadian Practise," which was a treatise timed when the trade acceptance was being introduced into the American banking system. This subtle form of Canadian propaganda was further supplemented by advertisements designed to stress Canada's rich resources. Closely allied with this publicity, directly in the interests of Canada and indirectly, of course, in the interests of the advertising bank, was that undertaken by the Canadian Bank of Commerce and by the Dominion Bank, which further served to draw attention by picture and by word message to our provinces and our cities. The Royal Bank of Canada during the year issued for New York distribution a booklet of Canadian statistics, and the Bank of Montreal, in a pamphlet, informed the American investing public regarding Canada's war loans.

## The Topical Booklet

The topical booklet has come to be a dominant factor in financial advertising, and our bankers have been quick to recognize it as a potential direct medium. The foremost banking institutions of the United States within the last few years have made extensive use of the booklet as part of their publicity programmes, and their continued efforts in this direction indicate clearly their satisfaction.

More recently the Union Bank of Canada, as part of a campaign to attract American manufacturers to the Dominion has brought out a booklet, "A Canadian Plant—Why?" the title of which is significant of its plea. The vagaries of the foreign exchange situation have recently been clearly explained to the layman by the Canadian Bank of Commerce's booklet and by "Protecting Your Canadian Customer," a booklet of the New York agency of the Union Bank of Canada which was primarily written for the education of the American exporter to Canada. The Bank of Montreal has issued "The British West Indies and British Guiana," which, after all, is propaganda in attractive form, and of pertinent interest to Canadian business men was the Union Bank of Canada's booklet upon "The Canadian Stamp Tax," meeting immediately the needs of a like situation created by the income taxes to which several Canadian financial institutions catered with carefully indexed booklets citing the law for the average reader. In publishing these and similar booklets our bankers unquestionably are furthering the public service of our banks

— in an educational way — while seizing the opportunity for publicity of the kind that makes a real appeal to the public.

#### The Illustrated Advertisement

The illustrated bank advertisement is probably the latest development in this country. As far as I am aware, the Union Bank of Canada's "Park-Union" series was the first among Canadian bank advertisements to be seriously treated by an artist. These advertisements, primarily designed to emphasize the extended international services offered through this unique organization, were made attractive with "local atmosphere." As an example: The advertisement which told of the bank's London (England) connections was illustrated with a picture of busy Threadneedle Street and the Bank of England as a background. Since, the Canadian Bank of Commerce has issued several attractively illustrated advertisements, and the Bank of Montreal, long regarded as ultra-conservative in its advertising, brought out a new series with sketches of the bank's head office.

The serious illustrating of bank advertising is not a casual development. Rather it represents a conviction among professional advertising men who have studied their publics that a picture drives home its message even more quickly than the printed word. Probably, too, the influence of the Victory Bond posters has been carried into our bank advertising.

#### Coming Down to Public

Canadian bankers of late have indeed branched into hitherto unexploited fields of publicity. The silk-hatted banker of the old school would be shocked to doubt to see bank advertising beckoning, cheerily, at him from the street cars — driving home a message of thrift and saving to the average individual of the community. Our banks are now advertising in the street cars of almost all our Canadian cities. Some bankers there are who have come to recognize electric signs and the "movies," but comparatively few may be said to be "soiled" for advertising other than that appearing in the newspapers, trade journals and well-recognized magazines. In other words, the press is still the most completely accepted medium for bank publicity.

The Canadian Bank of Commerce, the Royal Bank of Canada and the Merchants Bank of Canada, as outstanding examples, have come to regard the monthly commercial letter as a potent factor of publicity. The commercial letter may be said to be a consistent supplement to the topical booklet.

#### The House Organ

Not all bank publicity is being done publicly, however. The house organ is being adopted within several of our banking organizations. Already the Sterling Bank, the Home Bank, the Union Bank of Canada, the Canadian Bank of Commerce, the Royal Bank and the Dominion Bank are publishing monthly magazines solely in the interest of their staffs. The mission of the bank organ primarily is to develop an esprit de corps or a staff loyalty, but there is no gainsaying its measure of publicity even if only within the bank's own organization.

From the "exterior" or public viewpoint the coming of the bank organ should not lightly be dismissed. The bank organ unquestionably will accomplish much toward further improving the public service rendered by our banking institutions. As a literary contribution to our banking history it will no doubt exert its influence in due season, while at the same time offering an interesting contribution to the art of printing and to the trade of publishing.

A bank organ is particularly desirable for a Canadian bank under the Canadian system of branch banks. By this medium the bank's representatives at the frontier posts — and there are still many in this wide-flung Dominion — may be kept in intimate touch with the passing events of the home office. The bank organ may be made to fill much the same purpose of the small community weekly whose item of news, "Bill Smith has shingled his barn this week," is of more vital concern to the home-town boy far removed from his native hearth than events duly chronicled in display headings on the front pages of the metropolitan dailies.

Canadian bankers clearly have reached a finer and a keener appreciation of the arts and subtle influences of pub-

licity and advertising. All that remains is a fuller realization of the fact that bank advertising to be completely effective must become increasingly "popular," for the average man or woman is the individual whom the banks would reach to-day.

#### GOLD AND DOMINION NOTE HOLDINGS LOWER

Since the beginning of 1918 the holdings of gold and subsidiary coin of the banks in Canada have decreased to quite a large extent. In January of the year mentioned these holdings totalled \$95,785,084, reaching that point, which is the high record, after increasing during the years previous. Since then, outside of slight fluctuations, there has been a continued downward movement which reached the bottom in December, 1919, when the figure was \$84,213,438. There has been a slight improvement during the past year, but not of much account.

The decline in these holdings has also been accompanied by a similar movement in holdings of Dominion notes, commencing in December, 1918. From that date the movement continued downward until October, 1919, when it started upward. The climax was soon reached, however, and in April, 1920, the trend was again downward, and this time more pronounced.

Although it would seem from this that the cash position of the banks has become weaker, such is not the case. Call loans in New York, which are considered equivalent to cash, have increased to such an extent that the decline in gold and note holdings is more than offset, and to quite a considerable amount. Call loans in New York at the beginning of 1918 amounted to \$132,687,066, while according to the latest bank statement the figure is now \$188,367,459. It is more profitable for the banks to keep substantial amounts on call in New York, when they are not only available within twenty-four hours as cash but are also drawing interest.

The following table shows the average amount of holdings of gold, subsidiary coin and notes, each month since January, 1918:—

	Gold and Subsidiary coin	Dominion Notes
1918 —		
January	\$95,785,084	\$195,927,684
February	94,366,989	192,207,106

# Bank Circulation Higher Than in 1919

More Notes Outstanding at End of Each Month Than for Corresponding Months in 1919—Maximum is Reached in November and Minimum in Early Summer—The Security for Bank Notes and the Service Rendered

UNDER the Bank Act banks are authorized to issue notes of the denomination of \$5 and multiples of \$5 up to the amount of their paid-up capital. They are also permitted to issue in excess of the capital by depositing in the Central Gold Reserve an amount equal to such excess in gold or Dominion notes. In addition each bank may, during the cropping period, from September 1 to April 30, inclusive, issue up to 15 per cent. of its combined capital and rest, and on this excess interest must be paid the government at the rate of 5 per cent. per annum by way of tax. As a war measure this excess was authorized by the Finance Act of 1914, during the balance of the year, but this has not been availed of to any extent for the last year or two, the banks preferring to use the gold reserve.

The Finance Act of 1914 also authorized advances by the government to the banks, by the issue of Dominion notes against approved securities. The bank statement issued monthly by the government does not show to what extent this has been availed of. Just why this information should not be given is not apparent, as in making advances in this way the government is merely performing the same service to the Canadian banks and public that the Federal Reserve Banks in the United States were organized to do in that country.

## Effect of High Prices

The high prices of commodities, due to the inflation through war conditions, made an increase of circulating medium imperative, and this was the safest and most conservative plan of providing a fully-currency currency. When prices fall, as appears probable, the currency will reduce accordingly, thanks to the system of daily redemption of bank notes, which is one of the outstanding features of our Canadian system of banking.

This system by which each bank daily sends in for redemption through the clearings all notes of other banks received in the course of business is the chief method by which the elasticity of currency throughout the country is preserved. Under it the circulation outstanding is only that amount required for the actual business needs of the community, any excess being promptly retired in the ordinary course of daily business.

## Large Increase in 1920

During 1920 bank circulation, as shown by the comparative table below, has greatly increased in volume over the previous years:

	Monthly Average	Highest point
In 1917 -----	\$190,000,000	\$196,000,000
In 1918 -----	200,000,000	234,000,000
In 1919 -----	235,000,000	237,000,000

While the figures for December are not yet available, the average for the year 1920 will be about \$20,000,000 more than the year preceding. In the past the highest point each year has been in November, and for the year 1920 the same result can be looked for.

## Security for the Notes

The bank circulation is frankly an asset circulation, the notes being a first charge on the bank's assets. On this basis it will be interesting to know the security behind the issues. Under the section of the act requiring a deposit of a redemption fund equal to 5 per cent. of each bank's circulation, the effect is to make the banks as a whole responsible for the circulation of any one bank. For this reason the charter of the Canadian Bankers' Association gives the officials of that organization authority to inspect the records of issue of each chartered bank, in order to prevent an over-issue of circulation. So far as the banks are concerned their issues have been handled in a most conservative way, anything in excess of the paid-up capital being covered by deposits in the gold reserve.

The total circulation outstanding on August 31 was \$227,373,864; of this \$103,162,533 was covered by the deposit in the gold reserve which offsets the liability of the banks to that extent, leaving in round figures \$124,000,000. At the same date the banks held gold coin in their vaults amounting to \$879,954,831, or 64 per cent. of their issue not covered by the deposit in the gold reserve.

The total assets of the banks, less the gold reserve which specifically secures part of the issues, amounted on the same date to \$2,968,017,294. The notes are a first charge against these assets, so that for each dollar of circulation outstanding there are \$24 of assets for the security of the public.

## What Return Is Given?

The circulation privilege of the banks is sometimes criticized on the ground that the banks give no adequate return. Without circulation, however, the banks' power to extend credit would be greatly reduced, and the usefulness of the branch system decidedly impaired.

As the notes are not currency until issued it is possible for the branches to carry their funds in this form without expense. Owing to public confidence in the security behind them these notes pass as money in the ordinary course of business, and outside of silver for change the branches therefore require no specie, and the reserves of gold and Dominion notes are kept intact in the main offices, where they are readily available when wanted. The use of the notes is merely an extension of the credit system by which all business is carried on.

There is another feature of banking in this connection which is not fully appreciated. This is the amount in transit. Cheques and notes of other banks are received daily and credited to depositors. The bank does not receive actual payment for these until the following day, and it therefore constitutes an advance until payment is actually received. It is in effect a continuous free advance to the public. To illustrate: The circulation outstanding on August 30 last, less the amount covered by deposit in the gold reserve, was \$124,000,000. Against this \$30,000,000 of cash reserves is applicable, leaving the loanable balance \$94,000,000. On the same date the banks held in cheques and notes of other banks, credited to depositors but which the banks had not yet received settlement for, \$158,540,830, which far more than offsets the loanable fund derived from the circulation.

The following table shows the totals of the bank circulation by months for the last four years. The rise and fall during the year indicates the course of business demand, while the steady increase year by year shows the result of the steadily rising price of commodities, which has been chiefly responsible for the increase in the current medium of exchange.

## Circulation by Months

The amount of notes outstanding at the end of each month for the past three years, as shown by the banks' statements to the department of finance, have been as follows:

	1918	1919	1920
January -----	\$171,674,464	\$203,424,472	\$216,691,916
February -----	176,369,296	204,779,750	223,377,781
March -----	191,058,404	214,576,070	225,769,628
April -----	180,654,964	208,958,572	223,387,731
May -----	181,889,959	215,895,050	226,335,037
June -----	194,681,710	217,608,195	227,775,253
July -----	187,865,833	206,906,941	231,534,233
August -----	200,839,660	222,461,915	227,373,864
September -----	211,623,856	225,907,997	231,094,885
October -----	227,597,808	236,477,479	249,165,707

# Four Legal Decisions Affecting Trust Companies

Canadian Shareholder Held Liable For Double Liability Provision in Minnesota  
—Interpretation of Will in Nova Scotia—Executors Held Personally Liable in  
Alberta Case—Charitable Bequest Need Not Be Spent in New Brunswick

OF the cases before the Canadian Courts during the past year, dealing with matters of interest to trust companies, four have been selected for consideration in this review as being of special interest. The first case to be considered is that of *Allen vs. Standard Trust Company*, in which Justice Galt decided that the estate of a British subject who had bought and received shares in an American company was liable under the double liability clause which it was claimed obtained in the case.

The relief claimed was \$5,000, being the par value of 50 preferred shares of the O. W. Kerr Co., held by the late Sir William Whyte. The plaintiff Allen sued as the receiver of the O. W. Kerr Company, which is a foreign company, incorporated in the state of Minnesota, head office in Minneapolis, and doing business as vendors and purchasers of real estate; the Standard Trust Company is the executor of Sir William Whyte's estate. The basis of the plaintiff's claim consisted in a double liability alleged to attach in favor of creditors to every share of stock issued by a corporation which has become insolvent.

The present case was argued by the defendants mainly on the ground that the plaintiff was seeking to enforce against the defendant a personal judgment obtained in Minnesota against the late Sir William Whyte, a non-resident, and without notice. But the action was not upon any personal judgment, nor were the appointment of the receiver nor the assessment levied on shareholders carried on without notice, for the manager of the defendant company produced papers showing: (1) That notice of a special meeting of the Kerr Company to consider its financial difficulties was sent to Sir William Whyte; (2) the receipt of a copy of an order from a Minnesota court regarding the appointment of a receiver for the company; (3) that a copy of an order made by the Minnesota court in regard to the enforcement of double liability on the shares in question was received. Thus notice of all proceedings was given Sir William Whyte.

## Minnesota Law to Govern

In regard to the double liability question the court is quoted as follows: "The liability sought to be enforced against the estate of the late Sir William Whyte is a constitutional liability expressed in the statutes as follows: 'Each stockholder in any corporation, excepting those organized for the purpose of carrying on any kind of manufacturing or mechanical business, shall be liable to the amount of stock held or owned by him.' The construction placed upon this provision by the Supreme Court of the United States, and now applied by the courts in Minnesota, is that it is a provision intended to protect the creditors of companies, and that it imposes on all shareholders a liability over and above any balance remaining due upon their shares to the full extent of the par value of their shares. It operates as a double liability."

Mr. Justice Galt sums up his decision in six statements, the most important of which are, briefly: (1) That the O. W. Kerr Co. was duly incorporated in Minnesota. (2) That Sir William Whyte bought 50 preferred shares of the company and received dividends thereon. (3) That Sir William Whyte was a British subject and a non-resident of Minnesota, and he purchased the shares in Winnipeg; but, in my opinion, the proper law of contract in question, in so far as the rights and liabilities of the late Sir William Whyte are concerned, is the law of Minnesota. (4) Finally, I find that when Sir William Whyte became a shareholder of the O. W. Kerr Co. in the year 1911, he agreed by implication that his rights, liabilities and status as a shareholder in that company should be governed by the laws of Minnesota, and that under these laws the defendant company, as executors of the estate of Sir William Whyte, are now liable for the relief claimed, to-

gether with interest at six per cent., in accordance with the law of Minnesota."

## Mills vs. Biden

In the next case it was held by the Nova Scotia Supreme Court that it is the intention of the testator which must be considered, whatever the wording of the will may be. The case was that of *Mills vs. Biden*, and the part of the will in question was that making a bequest to his wife, reading as follows: "All my real and personal estate of which I shall die seized and possessed, or to which I shall be entitled, and all debts which may be due to me at the time of my decease, with full power and authority for her to dispose of the same at her discretion by absolute deed or deeds of conveyance executed by her, or by her last will and testament among my children, or any one of them; and should she die without executing such deed or deeds or last will and testament, then the same to be divided among my children surviving, or their legal representatives if dead, share and share alike."

After the death of W. N. Mills the widow seems to have thought she was the absolute owner of the real estate and accordingly made a deed of a portion of it to one William Hamilton, who by himself or his grantees, conveyed to one Biden, the defendant. The widow of W. N. Mills died on March 12th, 1902, without having disposed of the property by deed or will among the children of the deceased, and the action was brought to recover possession of the land so sold to Hamilton and subsequently transferred to Biden.

## Intention Was Children Should Benefit

The main contention was as to whether the will of W. N. Mills on the true construction to be put on it gave his widow absolute ownership or only possession for the duration of her own life in the real estate. If she took it in absolute ownership, then it is admitted that her deed to Hamilton and the subsequent deeds vested a good title in Biden. On the other hand, if the will only gave the widow a life estate in the real estate of the deceased, it would seem to follow that she could convey a life estate only.

Chief Justice Harris decides the question in the following words: "His intention that his children should benefit is perfectly obvious, as is also his intention that they should at least take on the death of his wife. They are to take before her death if she, in her discretion, should so decide, and should convey it to them otherwise on her death, either by her will in their favor or otherwise under the testator's will equally. I do not see how a plainer intention to benefit the children could have been manifested."

## Security Trust vs. Wishart

The third case is that of *Security Trust Company vs. Wishart*, in which the Supreme Court of Alberta held that executors are personally liable on their contracts so long as they have no relation to some obligation of the testator. The facts were that the company obtained \$15,000 for services rendered Mrs. Wishart and William Breckenridge, two of the executors of the will of the late John Breckenridge. The two executors had made an agreement with the trust company whereby the company was to act as their attorney and agent whenever they might be absent from the jurisdiction. The agreement then witnessed that the trust company was to receive \$250 per month for its services, and that some question might arise later as to what extent such compensation might be chargeable against the estate. A later clause then set forth that in the event of Mrs. Wishart not receiving \$500,000 and her daughter \$75,000, or any legacies being diminished by reason of payments to the trust company, Mrs. Wishart was to be "personally liable for such proportion or amount of the said trust com-

(Official administrator for the judicial district of Weyburn, Sask.)

pany's remuneration as may be disallowed by the court on the passing of the accounts of the said estate," provided that if William Breckenridge received more than \$5,000, "he shall to the extent of such excess contribute in equal shares with the said Irene Breckenridge (Mrs. Wishart) to such remuneration of the said trust company as may, on the passing of the executors' accounts, be disallowed by the courts."

This agreement was signed by the above two executors, but not by the third. The will of John Breckenridge provided that William Breckenridge and Mrs. Wishart would be amply compensated for their services by the legacies they would receive, and that the third executor who was to look after much of the detail was to receive \$250 per month, which he has received. At first it was thought that there would be a surplus, but it later developed that there was hardly sufficient to pay the debts in full.

His Lordship's decision is, briefly:

"The parties all thought the estate was not only solvent but very rich. Hence the idea of much personal liability was not very prominently in their minds. Mr. Wishart agreed that what she had indemnified William Breckenridge against would come out of her share of the estate. They were really all thinking that everything would come eventually out of the estate or someone's very large legacy from it.

"I therefore think that we ought not to discover any implied undertaking of the plaintiff to look to the estate and the estate alone for the major portion of its remuneration.

"My point is that there never was any possibility of the plaintiff company being able to sue the estate in an action for their services. Even if the reference to 'personal' liability which is found in the agreement had never been there at all, and even if Roach had signed, and although they were all described as executors, the plaintiff company could have sued executors personally, and them alone, for their agreed remuneration.

"There is nothing in the agreement specifically relieving the two signing executors from their ordinary personal liability, covering the whole amount agreed to be paid — the uncertain amount left after a fixed remuneration had been decided on for the two executors as well as the amount which might be allowed to them — i. e., the executors, as such remuneration. And I think, therefore, the ordinary rule of full personal liability should apply.

"The appeal should be allowed with costs and judgment entered for the plaintiffs against the defendants Wishart and Breckenridge for \$15,000."

#### New Brunswick Succession Duty

In the fourth and last case to be considered the question came up as to the application of the New Brunswick Succession Duty Act to certain charitable bequests made in a certain will.

The case arose out of an action commenced by the provincial secretary of New Brunswick against C. W. Robinson and A. E. Bartlett as executors and trustees of the last will and testament of one A. R. McClelan. The aggregate value of the estate of A. R. McClelan is \$205,602, of which \$152,999 was a charitable bequest to be administered by the above named trustees, Robinson and Bartlett. The residuary clause of the will which directed the application of this charitable bequest is: "I give and bequeath all the residuary estate to my executors and trustees in trust to manage, to call in, collect and convert the same into money and deposit the same at interest in a chartered bank or banks and use and employ the money so deposited from time to time and all interest therefrom arising for the benefit, advantage, assistance or the founding of such charitable, religious, educational or sanitary institutions as my said executors and trustees may from time to time see fit and deem desirable."

The questions upon which the court was asked to give an opinion were: (a) Is the plaintiff entitled to succession duty under The Succession Duty Act, 1915, in respect of all moneys passing to the said Clifford W. Robinson and Abner E. Bartlett, as trustees under the residuary clause in the will of the said Abner R. McClelan, deceased? (b) At what rate is succession duty to be computed? (c) Is the plaintiff entitled to interest on such succession duty as claimed?

The judge in his answer to the questions stated that as regards the first question the answer depended on the construction and meaning to be placed on section 6, sub-section 2, of chapter 27, of the Succession Duty Act, which reads as follows: "No duty shall be computed in reference to (2) any property given, devised or bequeathed for religious, charitable or educational purposes to be carried out in New Brunswick, nor the amount of any unpaid subscription for any like purpose, made by any person mentioned in this sub-section for which his estate is liable."

#### Need Not Be in New Brunswick

In answer to the first question His Lordship said: "I base my judgment upon the fact that upon a true construction of the will there is no obligation on the part of the trustees to carry out the intention of the testator in this province, and that the bequest is not a bequest to be carried out in New Brunswick. To bring the case within the statute the legacy must be given to be carried out in New Brunswick, and there must be a clear intention manifest upon the face of the will that the purpose is to be effectuated here. In the language of Palles, C. B., *mutatis mutandis* it is not sufficient that an application of money in New Brunswick would satisfy the bequest. In my opinion, therefore, the answer to the first question must be yes, or in other words that the plaintiff is entitled to succession duty under the Succession Duty Act, 1915, in respect of all money passing to the said C. W. Robinson and A. E. Bartlett as trustees under the residuary clause in the will of the said A. R. McClelan, deceased."

In regard to the second question His Lordship said:

"It is quite clear that if the bequest were made for the benefit of a charitable institution outside the province the assessment on the amount would be as follows: A rate of 10 per cent. would be computed owing to the institution being a stranger in blood to the testator, and this would be doubled because such beneficiary was outside the province. My judgment is that it is liable to a duty of 10 per cent. because it goes to institutions that must be regarded as in the same position as strangers in blood to the testator, and because it is not directed that it shall be disposed of for purposes to be carried out in New Brunswick."

In answer to the third question it was decided that in accordance with section 18 of the Succession Duty Act, interest at the rate of five per cent. could be collected from the time of the testator's death.

#### REAL ESTATE AS SECURITY FOR DEBT

Under the Bank Act, Canadian banks must not lend on real estate, but may accept mortgages as additional security for a debt already incurred. In case of foreclosure they are allowed to bid in the property, but cannot hold it over a certain length of time, so that naturally they get rid of it as soon as possible, and in doing so accept mortgages. The extent of the banks' business along this line is shown in two accounts in the bank statement, as given below, and it will be seen from the figures that it is not large:—

	Real estate other than bank premises	Mortgages under real estate sold
1919 —		
October .....	\$5,463,675	\$2,404,772
November .....	5,586,078	2,405,619
December .....	5,596,930	2,505,401
1920 —		
January .....	\$5,545,766	\$2,608,622
February .....	5,611,570	2,615,018
March .....	5,482,719	2,585,361
April .....	4,876,459	2,671,132
May .....	4,910,297	2,622,484
June .....	4,786,140	2,726,360
July .....	4,625,775	2,655,462
August .....	4,435,256	2,727,545
September .....	4,353,651	2,714,752
October .....	4,142,987	2,825,245

# Recent Conditions Relating to Investments

New Capital Well Distributed in 1920, With Growing Preference for Essential Industries—Demand for Tax-Exempt Securities Fairly Well Exhausted—The Course of Prices as Affecting Investments—Bankers Recognize Need of Sound yet Adequate Credit

By ADAM SHORTT, Ph.D.

ON the face of it it is merely a truism to say that capital investments are determined by the general economic conditions of the country. On second thought, however, it may not be quite so obvious as to what are exactly these economic conditions, or what are their respective importance, range, steadiness, and capacity for reliable estimate. How far are they purely domestic conditions and how far foreign or world conditions. Moreover, in what measure are they purely economic, and in what measure political, social or psychological?

Thus, when we attempt to penetrate our subject we find interesting questions arising on every side. Some of these are more or less soluble on fairly stable practical principles derived from experience, while others can only be noted as to their general nature and relative influence, but cannot be reduced to any permanent or practicable operation. By way of analogy, we may say that economic conditions in general are like those which govern agriculture. One may determine, more or less definitely, the character of the soil, the most effective methods of cultivation, the relative values of fertilizers, implements and seeds, as also the general climatic conditions; but we cannot be certain for more than a few hours in advance as to what the weather will be. Yet every one knows that the weather is a very potent factor in determining the crop returns. The psychological and temperamental features, whether of individuals, of special economic groups, or of public opinion in general, constitute the weather factor in economic conditions. While understandable in their effects and radical in importance, they can be predicted with no certainty. On the eternal uncertainty of weather conditions the weather prophet flourishes, while the trained meteorologist has little counsel. On the psychological element in economic affairs the confident predictions of the speculator and the plausible promoter rely, where trained economists will not hazard a definite opinion. But sometimes the weather prophet and the speculator are right, hence their influence.

## Psychological Factor is Prominent

Owing to the uncertainty of the present outlook, the psychological factor promises to be a very influential force in determining the course of the stock markets and the directions of investments. Immediate impressions are likely to be projected into an indefinite future and to encourage the conviction that conditions can never return to what were considered normal before the war. At one time optimism will govern and determine action, at another pessimism will rule the day, spreading with subtle and almost irresistible influence through the minds of those not well fortified by a long range of experience.

During the greater part of the past year the directions of capital investments have been fairly steady. There appears to have been a prevailing assumption that the difficulties anticipated at the close of the war not having materialized, it was rather late to expect them. The heavy trend on the part of persons with comparatively large incomes towards the purchase of long-term tax-exempt Dominion securities, which was so pronounced a factor in 1919, and which carried those issues to a substantial premium, had nearly exhausted itself towards the close of the year, when the last Victory Loan was successfully floated. Thereafter the flow of capital investment, during the greater part of 1920, was fairly evenly distributed between the various fields of public securities, Dominion, provincial and municipal, and private and corporate enterprises; the pulp and paper shares being naturally popular in virtue of their present prosperity and attractive future prospects.

All this furnishes a curious parallel to the economic situation which followed the last great world struggle, practically brought to a close in 1814. In that case, for the first two years after the close of hostilities business remained brisk, the populace spent lavishly, economy was disregarded, and the conviction became general that no serious reaction was thereafter likely to occur. It was felt that during the long war, notwithstanding its inflated credits and currency, and suspended specie payment, a new and permanent level of values had been established, which were not likely to be disturbed for an indefinite period. In the early part of the third year, however, as in the present case, stagnation began to develop, raw materials to accumulate, and prices to break. Industries slackened their pace and many ultimately closed, unemployment spread and a long and severe depression followed. In the course of this reaction, deflation was thoroughly accomplished, exchanges were readjusted, specie payment was resumed, wages and the cost of living fell concurrently, rendering production on a large scale both possible and profitable, and at prices suitable to the domestic consumer and the foreign markets. Prosperity on a sound basis rose to volumes undreamed of before the war, with increasing funds for investment drawn from a much broader section of the general public. These conditions, unfortunately, tempted reckless speculation, promising fabulous returns and letting loose in the economic world the psychological forces already referred to, the whole leading once more to reaction and crisis.

## How Far Will Parallel Go?

It does not of necessity follow that the general parallel with conditions after the close of the Napoleonic wars which has so far existed, must continue during the third and following years of the modern cycle. Yet there are many indications that healthy trade conditions on a sound financial basis should be reached as rapidly and effectively as possible over a wide area. This will permit of commercial and exchange relations being re-established, with the resumption of specie payment, and the affording of safe and attractive investment for capital. It would also promise employment for labor at reasonable rates of remuneration measured, not by inflated credits, but by a standard of living bearing some fair equivalent to the output of the worker in his own contribution of products or services.

There is, of course, much to be said for a gradual process of deflation if it could be effectively and justly carried out. But this is quite impossible. Certain lines of industry, such as building trades, do not lend themselves to this process. On the other hand, owing to the rapid accumulation of raw materials in the textile, leather, sugar and other trades, where production can take place with fair rapidity, the finished goods are certain to fall in price long before rents from housing, fuel, and transportation would adjust themselves, especially if encouraged to maintain a high level as long as possible. Large sections of the community, however, are liable to suffer a severe shrinkage of income before there is a corresponding fall in the cost of living in other lines. A more rapid adjustment all round would be more equitable in the end, and the sooner establish a sound and reliable basis for capital investment.

In the face of present conditions capital is naturally shy of ready investment in even standard lines of production, while prices are in a more or less crumbling condition, notwithstanding elaborate attempts to sustain them at levels above their normal gravity adjustments. It is quite true that in well-established industries with their fixed capital in good working condition and with sufficient supplies of raw ma-

terial at suitable rates, they are able to make a rapid turnover of their capital and thus secure reasonable profits, even on a gradually falling market. Such industries, however, can fairly well take care of themselves even on a rapidly falling market, and they are the sooner in a position of stability to meet future developments.

#### Must Be Shrinkage of Values

There is nothing to be gained and much to be lost in attempting to ignore the fundamental fact that in the process of deflation or readjustment of values, a certain shrinkage of fortunes must result, just as a corresponding expansion was temporarily secured through the highly artificial process of inflation incidental to the great war. But when we come to consider the great benefits which result for a country when its business is restored to former conditions, the temporary sacrifices necessarily involved in reaching this basis may be philosophically faced if not altogether relished. When the alternative is considered the outlook for new investment is certainly not hopeful. A country such as Canada cannot expect to confine its business within its own borders. If, therefore, the attempt is made to maintain prices upon a permanently higher level than in competitive countries, or to have the decline in prices lag behind the fall in adjoining countries, two complimentary results must inevitably follow. In the attempt to sell our own goods abroad we are steadily handicapped by high cost of production. Our trade is inevitably retarded and many industries must either undergo heavy sacrifices or curtail—possibly suspend—their business indefinitely, foregoing profits and throwing labor out of employment. Again, with high prices maintained in our domestic markets, Canada becomes an exceptionally attractive country into which to import foreign goods, despite our tariff rates. The slow readjustment, therefore, is a stagnating and unprofitable line of policy to follow.

#### Exchange Rate Now a Real Factor

It is to be observed that the barrier of a high exchange rate does not materially affect purchases under the compulsion of necessity to buy in any market available regardless of costs during war conditions; as also during post-war condition depending on the reckless extravagance of those who, in proportion to their previous incomes, have shared greatly in war profits. When, however, war conditions have passed and the accumulations of the spendthrift classes are transferred to more thrifty hands, those countries enjoying a high favorable exchange rate, notably the United States and even Canada itself, with reference to the European countries, will find themselves in a very difficult position as regards the sale of their goods. So long as the foreign purchaser has to pay the exchange rate with the United States and Canada, there will be no great loss to American or Canadian exporters, but when supplies are available from other countries on the basis of the sale of bills on London, then Canadian and American exports to Britain, not to mention other European countries, must conform to similar conditions.

Then the return on the goods is not the nominal value in the foreign country, but simply the domestic rate at which the exchange drawn against the foreign country will sell in one's own country. Thus the sale of a cargo of wheat to Britain at so many pounds in the British market nets the American exporter, and through him the farmer, just so many times, say, \$3.40, the price of the English pound in the New York market, for the time being. A similar cargo would net the Canadian exporter just so many times \$3.80. If the Canadian and United States farmers wish to spend the full returns from their grain in the purchase of British goods, they would recover in the corresponding low rates at which they could purchase sterling exchange, what they lost in the selling of sterling exchange drawn against their exports; the net result to both would be the same. In other words, in both Canada and the United States, a given number of bushels of wheat would purchase just the same quantity of British goods. If, however, the Canadian and American farmers have debts to pay, or wish to purchase

goods in their own countries, and the prices are the same in each, the American farmer would be worse off than the Canadian, while both of them would suffer a severe shrinkage in their incomes, so long at least as prices in their respective countries are still approximately at war levels.

#### United States is at Disadvantage

The more intelligent observers in the United States are not slow to recognize their disadvantages so long as war rates prevail. To protect themselves in the world's markets, the more enlightened Americans perceive the necessity for reducing prices and costs as rapidly as possible and as nearly as possible to a pre-war basis at least, in order that the handicap of a high favorable exchange may not cripple the foreign trade of the United States in proportion to the recovery of the productive power of competitive countries. The same, of course, applies to Canada only in a slightly less degree. These are important factors, therefore, affecting very radically and with increasing power the prospects of capital investment in Canada.

#### Essential Industries Have Best Outlook

As regards the relative attractiveness for capital investment of the fields of the necessaries and luxuries of life, it may be concluded that, at the present time, the former is much the more promising. During periods of inflation, however, as in the later years of the war and the first two years of peace the contrary would be true. In the first place, in periods of inflation a relatively prosperous community, such as that of Canada or the United States, does not purchase much more of the necessaries of life than in other periods. It is the demand of non-productive armies and the general waste of war which renders the necessaries of life scarce and dear. In times of inflation and consequent extravagance, however, there is no limit to the markets for luxuries save only the extreme limit of purchasing power. Not the body but the fancy has to be satisfied. In exceptionally prosperous periods, therefore, it is in the line of luxuries that the widest margins of profits are realized and the greatest fortunes are made. There arises, of course, a great and most virtuous wait over the high cost of the necessaries of life, while most of the same parties pay without a murmur famine prices for fleeting and unprofitable luxuries.

When, however, the spending power is curtailed, the urgency of the necessaries comes to the front, and the dispensable luxuries and the King's revenue therefrom are among the chief sufferers. During critical periods of trade and finance, it is obviously safer for investors, who are not quite on the inside of the market, to place their capital with those enterprises which are connected with the production of the necessaries of life, rather than its luxuries. Fortunately, the Canadian industrial field hitherto has been chiefly concerned with the great staples of trade.

#### Building Costs May Remain High

One of the most difficult aspects of capital investment is that connected with building and housing. Unfortunately while the increasing costs and lack of materials, which meant lack of labor, restricted, during the war period and since, the construction of houses for the common citizens, enormous funds with all available labor at high wages were employed, chiefly by the Dominion, but also by the provincial governments and municipalities, in the construction of extensive buildings connected more or less with war work, and many of which are now of but little service in proportion to their costs. Private corporations connected directly or indirectly with war contracts also spent large sums in buildings and other fixed capital, while those contributing to the amusement of the masses and the furnishing of other forms of luxury found it quite profitable to build for these purposes, in spite of the high costs involved.

The pressing popular need for housing still remains, therefore, and there is less prospect of an immediate decline in cost in that essential line than in any other. This is chiefly due to the fact that the cost of building is chiefly de-

terminated by the cost of high-priced labor as distinguished from the standard raw materials of construction. As a result, so long as the exceptionally high remuneration of the building trades and the shortness of their hours remain on the present basis, the cost of building cannot substantially decline, even should there occur a considerable reduction in the more essential building materials.

The chief sufferers from the present unfortunate situation are the lower or unskilled sections of the laboring classes, the shop-keeping assistants and the numerous clerical classes whose incomes are far below those of the building trades. Many schemes have been propounded for the relief of the situation, but they are all brought to a stand by the excessive cost of building. Naturally, therefore, at the present time, very few persons will invest capital with any expectation of profit in the construction of dwelling houses for rent, or even in the construction of closet apartments on the cheapest lines that will pass inspection. Apart from victimising the insurance companies, there is no possibility of a rapid turnover in the investment of capital in housing accommodation. Aside from governments, therefore, or those institutions who build without hope of permanent pecuniary reward, there is likely to be little capital invested in buildings until a paralysis of building leads to a reduction of costs.

#### Needy Cannot Pay Prices

This is the only important field in Canada which illustrates the situation which prevails in so many lines in Europe. Briefly the situation is one in which there is widespread and urgent need, but very little economic demand. In other words, the needy have no adequate means of payment for the supplies they require. In the case of many millions of people in Europe, there is a most urgent need for supplies of practically all the necessities of life, but as these people have little of commercial value to offer in exchange, their need does not furnish an economic market; it promises no remuneration for capital devoted to the supply of their wants. This condition has occurred after every great war, but it was sadly overlooked by the thoughtless commercial optimists rejoicing over the prospects of a large and highly profitable market for the supply of Canadian and American products in the areas devastated by the war.

The dire need of Europe extends far beyond the regions which these persons had in mind. America could dispose of all her surplus food and keep most of her industries busy without adequately meeting these urgent needs, but for the vast majority of our products we should have to take the European I.O.U.'s for an indefinite period. In other words, their chief available export is the product of their promissory printing presses, one war industry which is still in active operation among them.

In point of fact what is required to meet the most urgent need of Europe is charity, not trade, much less profiteering. In view of prospective production it cannot be too clearly realized that the economic markets of the world are far more limited since the war than they were before it. In the recovery process, supply bids fair to exceed, for some time, demand backed by the means of payment. Both the capital and labor which hope to successfully compete for the supply of such limited markets, must revise as speedily as possible the cost of production. Apart from the economy of mechanical devices and industrial organization, this means the reduction of the cost of living, and, under present conditions, this means the reduction of profits and wages, into which ultimately all costs resolve themselves. With the enormous supplies of our native raw materials and the steadily falling prices of the chief foreign raw materials, except fuel, it should be possible for Canada to adjust itself to the new world conditions to as great an advantage as any other country, not excepting the United States.

One primary requisite of a sound economic condition and, therefore, of the safety of the field for capital investment, is the maintenance of the trade and particularly the commerce of the country upon a fluid basis of exchange, that is,

a fluid money market. Now an inflated credit market is no proof of a fluid money market; nor do the highly expanded banking returns give any assurance of a fluid money market. On the other hand, it is quite evident that the leading Canadian bankers are very much alive to the real needs of the situation, and take a very intelligent view of their functions. Their energies are being directed alike in expanding accommodations in certain directions, while curtailing credits in others, to bring as large a volume of the trading capital of the country into the most flexible and serviceable form possible. This is essential to prevent the tying up of large funds in stocks of goods or forms of investment which cannot be realized upon within comparatively brief periods. It is highly necessary to devote commercial capital to productive industries with a rapid turnover, thus permitting of the maximum employment for labor in the supply of essential goods and services.

In any case it is specially desirable that the irresponsible speculator should be kept out of the capital market until conditions are once more fairly normal, when his operations will affect mainly himself. In critical periods, when even the most experienced captains of industry and pilots of finance are more or less nervous and worried as to the extent and duration of this, that, or the other squall, current, or tide, the speculator obscures all issues, displays false signals, and in raising false hopes induces in the end more widespread disaster or even despair. All past history of the readjustments after important wars establish the certainty of the process of deflation with an inevitable shrinkage in values. But when the situation is intelligently realized and calmly dealt with, panic can be avoided and the disasters which are almost entirely due to it successfully evaded.

#### EXPANSION OF AUTOMOBILE INDUSTRY

When the war broke out the number of automobiles in use in Canada was 67,415, but now the number is 400,000, and the value of those registered is \$600,000,000. Although the price of cars and of gasoline has increased during the current year, their use for pleasure as well as for business purposes has steadily increased. For the manufacture of automobiles and the assembling of parts \$54,000,000 is invested in Canadian plants, which employ 15,000 hands, receiving annual wages of \$15,000,000. Sales of cars exceed \$100,000,000 annually.

A large portion of the material used in the production of a Canadian car is imported. For parts alone the annual bill is \$12,000,000, while the requirements of automobile manufacture entail an increased importation of glass, rubber, iron and steel. The growing use of automobile vehicles accounts in great measure also for the steady increase in imports of petroleum products. For the twelve months ended June 30th last 514,897,000 gallons of oil were imported, as compared with 433,018,000 gallons for the preceding twelve months. The cost of this year's imports of oil in its finished and crude forms is estimated at \$35,000,000.

The Canadian Bank of Commerce, in its monthly commercial letter for September, points out that this, however, does not represent the whole cost of maintaining cars. During the current year a large amount of capital has been invested in garages, public and private. The former are now as numerous as were once village blacksmith shops, which they have in many cases absorbed, and serve to a very large extent the users of pleasure cars. They also give employment to a large number of highly-paid workmen. While expenditures on these accounts may to some extent facilitate production and trade, the physical volume of the former has not materially changed. Continued expenditure of labor and capital on so large a scale without tangible results in exportable products will not aid in bringing about more satisfactory conditions. Declines in prices of essential food, clothing and house-building materials cannot be looked for so long as a disproportionate amount of capital and labor is expended on sustaining activities that do not produce the necessities of life.

CANADIAN BOND SALES \$320,000,000

More Than Two-Thirds of This Total Was Placed in the United States—Large Amount of Provincial and Railroad Financing—Many Municipalities Make Domestic Loans

CANADIAN bond sales in 1920 reached the substantial total of \$324,914,667, according to figures compiled by *The Monetary Times*. A summary on another page of this issue shows that this total is made up as follows: Government (all provincial), \$125,993,000; municipal, \$56,371,391; railroad, \$96,500,000; corporation, \$46,050,276. In the absorption of this large amount, however, Canada participated only to a small extent, more than two-thirds, or \$223,084,000, going to United States investors.

The amount of Government bonds sold, when compared with the five years previous, seems small, but then there was no war financing by the Dominion Government. Sales of municipal securities exceeded those of the previous year by about \$28,000,000. The bulk of these bonds were placed in Canada, although slightly more than \$10,000,000 found their way across the line. The record of municipal sales since 1911 shows the following results: 1911, \$30,295,838; 1912, \$19,767,365; 1913, \$20,550,239; 1914, \$34,483,360; 1915, \$31,910,214; 1916, \$19,640,778; 1917, \$17,955,714; 1918, \$41,860,361; 1919, \$26,274,089; 1920, \$54,271,391.

Railroad and other corporation securities increased greatly over the previous year. All of the railroad bonds were sold in the United States, while the greater part of the corporation bonds was disposed of across the line.

A feature of the bond sales in 1920 was the large number of municipalities which successfully arranged their own financing. Two Provinces, Alberta and Saskatchewan, are also included in the list of domestic loans.

A conservative estimate of local loans during the year, including those made by a large number of western school districts and rural municipalities, which have not been heard from, would be about \$7,000,000. This amount seems small as compared with the total of all bond sales, but it is the largest on record.

In addition to the 6 per cent. 10-year bonds, the Province of Alberta also disposed of a considerable amount of savings certificates. The exact amount sold during the year has not yet been ascertained, but up to the end of November the total was \$1,074,274, as compared with \$681,029 for the whole of 1919.

\*\*Included in this sum are \$8,000,000 of a total of \$50,000,000 Canadian bonds repurchased in United Kingdom since the war commenced to the end of 1916. The inclusion of the \$42,000,000 of unclassified repurchases brings the total of Canadian bond sales in 1916 to \$356,000,000.

\*In the above tables it has been estimated that of the first Canadian war loan of \$100,000,000 in November, 1915, \$25,000,000 was sold in the United States; second loan of \$100,000,000 in September, 1916, \$30,000,000 in the United States; third loan of \$150,000,000 in March, 1917, \$25,000,000 in the United States; fourth loan (allotted) of \$400,000,000 in November, 1917, \$10,000,000 in the United States, fifth loan \$25,000,000 in the United States.

†Included in the December figure is the amount of domestic loans made during the year, totalling approximately \$7,000,000. As most of these loans were made over an indefinite period, it is not possible to classify by months. \$2,100,000 of Saskatchewan rural telephone bonds, the approximate amount sold during the year, is also shown in the December Municipal total.

NOTE.—In addition to the above loans, advances for war purposes have been made to Canada by the Imperial Government, and Canada has established credits here for the British Government. These loans are not included in the above figures.

**WE** have at all times a select list of high-grade Government and Municipal Bonds suitable for the investment of:

PERSONAL FUNDS            ESTATES            TRUSTEES  
 MERCHANTS' OR MANUFACTURERS' SURPLUS FUNDS  
 AMERICAN FUNDS ON DEPOSIT IN CANADA  
 INSURANCE COMPANIES

## *Manufacturers and Wholesalers*

REGINA has a model wholesale and industrial area, planned and developed to give every advantage to manufacturers and distributors. The district is served by spur track system linked with the three transcontinental railways. It has pavements, water, sewer, electric light and power, and street railway services, all of which are owned and operated by the City. Some seventy new businesses have located here since the beginning of the war, and the City still holds nearly Two Million Dollars of Property in this area which is available for manufacturing or warehouse sites on attractive terms to bona fide firms.

Detailed information concerning the above will be furnished promptly on application.

CITY COMMISSIONER, Regina, Saskatchewan

BONDS QUOTED ON TORONTO STOCK EXCHANGE

Comparative Statement of Prices and Sales during 1919 and 1920

Table with columns for months (1919 JANUARY 1920, 1919 FEBRUARY 1920, 1919 MARCH 1920, 1919 APRIL 1920, 1919 MAY 1920, 1919 JUNE 1920, 1919 JULY 1920, 1919 AUGUST 1920, 1919 SEPTEMBER 1920, 1919 OCTOBER 1920, 1919 NOVEMBER 1920, 1919 DECEMBER 1920, 1917, 1918, 1919, 1920) and rows for various bond types like Ames-Holden-McCready, Canada Bread, Canada Cement, etc.

BANKS QUOTED ON TORONTO STOCK EXCHANGE

Comparative Statement of Prices and Sales during 1919 and 1920

Table with columns for Banks, 1919, and 1920, subdivided by month (January, February, March, April, May, June, July, August, September, October, November, December). Each month includes High, Low, and Sales data for both years.

ADDITIONAL AND NEW COMPANIES LISTED ON TORONTO STOCK EXCHANGE

Table listing various companies (e.g., Abitibi, American Cyanamid Co., Dominion Coal) and their listing dates, with columns for Stocks, January, February, March, April, May, and June.

STOCK MARKETS IN 1920

Record of High and Low Prices and Total Sales for the year, on Montreal and Toronto Stock Exchanges

Table with columns for STOCKS, 1919, and 1920. It lists various companies like Abitibi, Amex-Holden-McCreedy, Asbestos Corporation, etc., with their high and low prices and total sales for both years. The table is split into MONTREAL and TORONTO sections.

RIGHTS

Table listing rights for Bell Telephone, with columns for price and sales.

**CURRENT PROBLEMS IN THE MORTGAGE LOAN FIELD**

**Payments Good But Not Equal to Demand for New Loans—Shareholders of Some Companies Have Suffered, But Results Are Generally Good**

BY JOHN APPLETON.

**T**O-DAY'S problem in the field of the mortgage lenders is obtaining funds to meet the demands of a larger number of borrowers than they have hitherto had to deal with. As usual, it has happened that borrowers are many, so lenders are few. Of course this applies to the particular sphere in which the mortgage lender operates. There are to-day actually more lenders than usual. To these ranks have been added very large numbers who have saved to serve their country by purchasing Victory bonds; many who have loaned for the first time to their municipal governments, who, resentful of conditions demanded by the usual financial market, offered "over the counter" on terms less onerous their securities to their own people; and many who have taken advantage of the attractive yields of provincial securities. To this result increase in numbers and efficiency of selling prices has contributed very substantially. Although cities, provinces and the Dominion have borrowed more, paid the price, onerous as it is, and seem to be assured of still more if asked for, there does not appear to be in immediate prospect any source of supply approximately adequate to meet legitimate mortgage demands.

**Funds Attracted to Bonds**

To verify what appeared to be, to those familiar with mortgage lending conditions, the facts with regard to this situation, direct enquiry was made of some representative lending organizations. One general manager was found almost deluged in half-yearly remittances of principal and interest which a few moments before, being interviewed, had been placed on his desk by the postman. "What are you going to do with all the money coming in?" he was asked. "It's all spoken for," was the answer. "Any new money coming in from either domestic or foreign sources?" was the next question, and the answer was, "No; it's lucky for the borrower that we can utilize the monies paid on account of principal to meet but a very small part of the demands. Another manager who supervises mortgage investments exceeding \$30,000,000 told a similar story and added, "There's very little new money for mortgage purposes; we can't get it. It's slipping away from 7 and 8 per cent. mortgages into 7 and 8 per cent. bonds." In each instance, it was ascertained, payments of interest and of principal were above the average. Also the information was voluntarily given that the amount of mortgages outstanding was gradually declining.

An examination of the statements of 55 companies discloses a steady increase in securities as compared with mortgage investments. This is illustrated by the following comparisons:—

	1916		1919	
	Mortgages	Securities	Mortgages	Securities
Credit Fon. . . . .	\$4,567,313	\$3,915,304	\$35,183,953	\$7,725,516
Can. Perm. . . . .	27,988,970	2,161,954	26,211,306	5,308,025
Huron & Erie	11,341,924	5,388,150	13,339,194	5,227,502
Trust & Loan	15,106,990	2,390,000	14,079,836	3,335,000
Ont. L. & D. . . . .	6,336,418	796,437	1,759,917	2,319,634
Lon. & Can. L.	4,443,114	392,586	4,381,380	461,332

Totals \_\_\$105,784,729 \$15,044,431 \$97,955,586 \$24,377,039

**Need Money in Future**

The half-dozen companies whose figures we have taken are quite representative of the whole. Within three years their security holding increased by 60 per cent. and mortgages declined 7 per cent. For this change there must be some good cause as each has a very efficient organization designed for mortgage lending purposes. Actual funds at the disposal of such organizations suffered no actual decline in volume. Foreign holders of debentures to an appreciable extent desired their money back, but these withdrawals were more than offset by increase in deposits and domestic debentures. In this coun-

# Mining in Manitoba

This industry will be the greatest in the Province within five years.

We have representatives in the most important districts.

## Manitoba Finance Corporation Ltd.

410-11 Electric Railway Chambers

Mining Department

WINNIPEG

**NOTICE**

is hereby given that the Annual General Meeting of the Policyholders and Guarantors of the

## North American Life Assurance Company

will be held at the Head Office of the Company, North American Life Building, 112-118 King Street West, Toronto, Ont., on

**THURSDAY, 27th January, 1921**

at 11 o'clock in the forenoon,

for the reception of the Annual Report, a Statement of the Affairs of the Company, and the transaction of all such business as may be done at a general meeting of the Company.

W. B. TAYLOR,

Secretary.

January 8, 1921.

## Condensed Advertisements

"Positions Wanted," 3c per word; all other condensed advertisements 5c per word. Minimum charge for any condensed advertisement 65c per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

**WANTED.**—Position with a Financial Institution by young man with fourteen years' banking experience. Clean record. Box 375, *Monetary Times*, Toronto.

**WANTED.**—Special Agent and Inspector, Provinces Manitoba and Saskatchewan. Headquarters, Regina. Represent three large American Companies. Good salary. Replies will be treated confidentially. Box 371, *Monetary Times*, Toronto.

try, however, there is now, and there will be in all probability for a generation or two yet to come, an incessant demand for capital for the development of homes, farms and urban communities.

If this demand is not met a form of development essential to the nation's welfare is restricted and progress halted. Progress in other fields in Canada did not cease during the war. Industry expanded very markedly in response to the opportunities for greater reward which they respectively offered. To the lender on mortgage security there were, however, more "knocks" than rewards. He was subjected to discriminatory restrictions, taxation and moratoria in place of encouragement. It can be no surprise therefore that funds usually placed at the disposal of mortgage lenders have been diverted to other fields, and in consequence the entire country is faced with an unprecedented demand for loans from builders of farms and homes, the need of which is of first importance.

#### Public Money Appropriated

The Canadian industries expanded, as already noted, during the war as a result of those abroad being turned from ordinary trade to war purposes. Movement of rural to urban centres of population was therefore accelerated. Meanwhile the usual agencies which provide capital and those who study and supply the demand for housing accommodation were held in check by moratoria, special discriminatory taxation by the Dominion government, and a press which voices too readily and too loudly a spirit of Bolshevism chiefly nursed among the shiftless and thriftless. When their own chickens come home to roost they clamor for state help. All forms of government, municipal, provincial and Dominion, were approached and pressed to make advances at a low rate of interest to build houses. The Dominion government appropriated \$25,000,000, all of which has been absorbed. Municipalities and provinces have helped, and what information has been procurable leads to the belief that they have had unfortunate experiences. It may be ventured here, in the way of prophecy, that when the final history of the housing experiment is written it will be an asset worth as much as a deposit in the Farmers' Bank, still recorded as an asset in Ontario's public accounts.

Public money used in this way, at great cost to the taxpayer, alleviated pressing needs of the moment, but it established in the minds of a militant minority the idea that the provision of a home is not now the business of the individual but a duty the state owes to the individual. Even though a thrifty individual builds for the service of others he is threatened with a "court" to regulate the rent of it. In this way the state is flirting in dangerous proximity to the meshes of the master spider Bolshevism. The wary investor, craftsman's skill and the organized lending agency will retire from the risking of effort in such a field as the state extends its operations therein.

#### Will the State Give Way?

It remains to be seen whether the state and municipality jointly are to continue to act as mortgage lenders, as they did under cover of special war conditions, and voluntarily in a limited and quite ineffective way, in lending to farmers in two of the western provinces. Sporadic demands for moratoria, bonused lending, and retroactive legislation prejudicing legally-made contracts still exist. That they have contributed to making necessary higher taxation, higher interest rates and their natural corollary—shortage of funds—is not fully realized. By this yielding to pressure from a minority of borrowers a burden has been placed by bonused provincial and municipal lending on all mortgagors. Nor is considerable relief likely to come until public opinion demands and ensures freedom and sanctity of contracts and the removal of discriminatory taxation of mortgage corporation investments.

#### Results for Shareholders

From the figures I have quoted and enquiries made it is inferred that the companies generally have held their own during the war period and that one which followed. At the present time they are generally prosperous, but there has not been expansion. Shareholders have fared not too well. Dividends

did not increase as the cost of living ascended. Nor have the shareholders' funds earned as much for them as they might have done if they had been applied to industry and trade during years when rewards ran so high as to incur liability under the excess profits, too. Loan company profits did not get into such a class. But satisfaction—a satisfaction worth a good deal to shareholders—is knowing that despite rough handling at the hands of legislatures and tax-gatherers they could rely upon getting cash dividends regularly. There are but few exceptions and these are confined to companies operating in localities where drastic moratorium legislation was taken advantage of. From now on—say for another ten years—funds employed in the mortgage field will be in very great demand at high rates, and as a result the loan company shareholders should profit.

Interest rates in Canada have been held in check by credit control and credit creation by the Dominion government. Force of circumstances is now compelling that authority to save itself and the country from disaster by relinquishing control and preparing the way for the return of more normal conditions.

#### Treatment Must Be Fair

It can be safely assumed that there will be no great volume of new money available for mortgage purposes until the investing public is convinced that legislators will not unnecessarily impair mortgage contracts, and that, at the same time, they will see to it that the mortgage itself and the security covered by it is not insidiously attacked by varying forms of special taxation. Treatment of this character, not applied to all other forms of very desirable constructive national effort, is in a large measure responsible for the steadily advancing rates of interest on mortgages.

The burden is on the borrower, not the lender, but the latter naturally avoids those paths in which unnatural obstructions are placed. Those provinces of Canada which did not so obstruct the mortgage lender will find that its borrowers will have a greater choice of lenders and of terms. This is quite in accord with the natural operation of economic law.

#### EXPORTS TO SMALL FOREIGN COUNTRIES

In the tables entitled "Canada's Commercial Balance Sheet," shown in this number, it will be noted that the exports to "other foreign countries" during the fiscal year ended March 31, 1920, amounted to substantial figures. The details of these items were as follows:—

#### Imports Into Canada, 1920, Under Heading "Other Foreign Countries"

Countries.	Dutiable.	Free.	Total.
Czecho-Slovakia . . . . .	\$2,238	.....	\$2,238
Finland . . . . .	.....	\$ 480	480
French East Indies . . . . .	.....	5,524	5,524
	\$2,238	\$6,004	\$8,242
Countries.	Canadian.	Foreign.	Total.
Albama . . . . .	\$28,600	.....	\$28,600
Bulgaria . . . . .	221	.....	221
Czecho-Slovakia . . . . .	387	.....	387
Esthonia . . . . .	44,862	.....	44,862
Finland . . . . .	26,438	\$ 45,743	72,181
Germany . . . . .	610,528	45,298	655,826
Palestine . . . . .	3,884	.....	3,884
Poland . . . . .	32,384	123,762	156,146
Syria . . . . .	15,575	.....	15,575
Tripoli . . . . .	752	.....	752
	\$763,631	\$214,803	\$978,434

Saskatchewan's sinking funds total \$1,324,442, not \$324,442 as was incorrectly printed on page 129. These sinking funds, together with the debt for utilities, etc., make up a total of \$22,133,243.

# The Market Record of Canadian War Loan Issues

Prices in November Were at Lowest Point—High Water Mark Was Reached in June, 1919. When All Outstanding Issues Were Above Par—The Influence of Exchange, and the Development of Market Control—The Embargo and the Present Unsatisfactory Position

**D**URING the five years which have now elapsed since Canadian war bonds first appeared upon the market they have experienced all the vagaries to which a security market is subjected by war conditions. They have advanced to a premium and have sagged to a discount. Their market price has been fixed by a bond dealers' committee, and again they have been thrown upon the open market; just at present both methods are in use, some of the issues being traded in on the stock exchanges, while others are handled at fixed prices. Some of the most critical disputes in Canadian financial circles have centered around the war loans. On what terms they should be issued, and whether patriotism or an attractive rate of interest should be relied upon to ensure the success of the flotations, was the first that arose. Once a loan was placed, there came the question of trading. When several loans had been issued and the amount of war bonds outstanding grew to what was for this country an enormous amount, it was urged that the tax exemption feature should be abolished. The downward sweep of prices has again revived the question as to whether the price of the loans should be fixed or left to the hazards of an open market. Now that all the issues have been marketed, and it is accepted that the terms of sale must be strictly observed, the only surviving dispute is that of market price; here, however, the question of ways and means developed numerous difficulties, and the methods adopted to support the market have been the subject of keen criticism.

## Some Mistakes Were Made

War finance was a new experience for Canada, and there is, therefore, some excuse for uncertainty. The methods adopted by the United States, Great Britain and other countries of experience varied, and the record of the Canadian issues compares very well with that of the bonds of these countries.

Now that war financing is completed, and all the issues are actively traded in at prices which are stable in view of present conditions, a synopsis of the course of prices of the war bonds as marketed securities may be appropriate. This involves the consideration of prices, control, and several other factors which have exerted influence upon the market.

It is not necessary for this purpose to review the details regarding each flotation in Canada. The essential facts about the domestic war loans are given in the accompanying table, however, as the issues differ in interest rate, in taxability, and in the places where interest is payable, points which must all be considered by the prospective buyer. The tax exemption, it must be remembered, applies only to federal income taxes, and not to the income taxes which are levied by several of the Canadian provinces and cities.

## First Loan Set New Record

When it was seen in 1915 that the war would be an extensive undertaking for Canada, it was decided to issue a domestic war loan. The amount required at the time, \$50,000,000, far exceeded any single issue previously made in this country, and to ensure its success everything possible was done to make it attractive. The bonds were to mature in ten years, carried interest at 5 per cent., and were made exempt from federal taxation, although at that time a federal income tax was not even under consideration.

The bonds were dated December 1, 1915, the issue price was 97½; a full six months' interest was to be paid on June 1, however, and as a discount was allowed for advance payment in full, the actual issue price was about 96¼, yielding approximately 5½ per cent. Almost 25,000 subscribers responded, with a total of \$79,000,000, and additional assistance from the banks brought the total up to \$100,000,000, all of which was allotted. Although provision was made for pay-

ment by installments, about \$75,000,000 of the bonds were paid for in advance. These bonds were immediately listed on the Montreal and Toronto Stock Exchanges, the first sale taking place on December 18th on the Montreal exchange, at 98, or ½ above the issue price.

## The Second War Loan

The second issue was made in the fall of 1916, when a fifteen-year maturity was chosen, the bonds being dated October 1, 1916. Otherwise the terms, including the price, were the same. The cash discount this time made the price about 97, yielding 5.30 per cent. The success of the first issue induced the government to ask for \$100,000,000, and the response of \$145,000,000 from 34,526 subscribers justified this confidence. Only \$100,000,000 was allotted, however, and this cutting down of allotments, coupled with the fact that the previous issue was already selling at a premium compared with the issue price, resulted in the advance of both issues to around 98½. These bonds were also listed at once, the sales during the first week in October being mostly at this figure.

Both these loans had been made at prices which were attractive in view of market conditions, and there was a keen demand for the bonds during the last few weeks of 1916. The early weeks of 1917 brought a slump in the market, however, resulting from a successful German drive in France and the entry of the United States into the war. At the beginning of March both issues were selling at 96¼. At the same time Great Britain's financial stress became acute, and the Canadian government was impressed with the necessity for meeting more of its financial requirements, such as the payment of her troops abroad and credits for the purchase of supplies in Canada.

## The Third War Loan

Another war loan was necessary, therefore, and a price of 96 for twenty-year 5 per cent. bonds, dated March 1, 1917, was decided upon. A discount for prepayment in full was again allowed, making the price 94.068, yielding 5½ per cent. Although the United States was now faced with obligations of her own, a special effort was made to bring in subscriptions from across the border by making the bonds payable in New York as well as Canada. The success of this loan eclipsed previous results, a total of \$183,000,000 being received, of which \$150,000,000 was issued.

In spite of this success, however, prices continued to go down. The first sales on the exchanges took place about the middle of April, at 95, but the market weakened immediately. The new bonds touched 93¼ at midsummer, after which they recovered to 95 in August, but were down to 91¼ at the end of the year. The other issues suffered corresponding declines. By this time the funds had been used up by the government, and the necessity for raising still larger sums to meet the increased scale of expenditure, in the face of adverse market conditions, became a problem of paramount importance. The solution was the launching of the first Victory loan.

## New Plan of Raising Money

Here it may be pointed out that the previous issues had been made by the usual underwriting methods. Bond dealers, stock brokers, banks and other financial institutions competed for subscriptions. There had been much duplication in work, and especially in the efforts to secure the large subscriptions, on which the commissions amounted to a considerable sum. For the Victory loan it was decided to pool the efforts by forming one huge selling organization. Practically every bond dealer, and many stock brokers, insurance agents and other financial men took part in the campaign. Dominion, provincial and local committees directed the efforts, and the banks took in the money.

## Province of Vast Resources

**T**HE finances of the Province have been restored to a sound condition, current expenditure is being kept within revenue, and borrowing is restricted to absolutely necessary capital expenditures of a reproductive nature, or in connection with assistance to returned men to re-establish themselves in civil life.

### FINANCE

#### FISCAL YEAR ENDED 31st MARCH, 1920

Revenue (current account) . . . . .	\$10,931,279.21
Expenditure (current account) . . . . .	9,687,744.62
Expenditure (capital account) . . . . .	2,224,541.27
Total assets exceed total liabilities by \$22,181,252.63, exclusive of natural resources.	

### LUMBER

The forests of the Province vie with its mines for first place in the splendid array of its natural resources, and furnish about one-fourth of the Province's revenue. In the Queen Charlotte Islands alone is a stand of twenty-three billion feet of sitka spruce. With the application of modern methods of protection and reforestation, these are practically inexhaustible, and the demand is an increasing one. Forest production in 1919, including paper and pulp, was valued at \$70,285,000.94, an increase of 30 per cent. over the previous year.

### MINING

The mineral output for 1919 was valued at \$33,296,313, a decrease of about 20 per cent. This decrease in production as compared with the preceding year, loses its adverse significance when it is considered that the 1919 production is still materially greater than that of any year prior to 1916, and that the larger productions of the years 1916-17-18 were due to the stimulus of war and the inflated prices attendant thereon. There is considerable activity in mining throughout the Province, and a great deal of prospecting and development work is being done as a result of the passage of the Mineral Survey and Development Act. Diamond drilling, carried on by the Department of Mines, shows a growing tonnage of iron ore, and investigations are still in progress.

### FISHERIES

As in recent years, British Columbia again led all the Provinces of Canada in the value of her fishery products, which totalled \$27,282,223. Her output

for the year 1918 exceeded in value that of Nova Scotia by \$12,139,157, and exceeded that of all the other Provinces combined by \$9,456,968. This includes the products of the whaling industry, which has been prosecuted vigorously during the past few seasons on the West Coast of Vancouver Island and the Queen Charlotte Islands. Last season's catch of halibut amounted to eighteen million pounds in weight.

### INDUSTRIAL

To all manufacturers British Columbia offers very great opportunities, having illimitable supplies of all raw materials. Iron ore exists in large bodies, and in most cases close to power and transportation. An abundance of water power readily convertible into electric power is available at numerous points throughout the Province. The utilization of the immense iron deposits of the Province appears to be an early possibility, and the establishment of steel mills and steel shipbuilding plants is under consideration. Wooden shipbuilding has been in progress for the past two years, and the vessels already constructed are operating successfully. Under the Department of Industries the Government has loaned over One Million Dollars to assist and develop the Industries of British Columbia.

### AGRICULTURE

The year 1919 was the most successful on record so far as the agricultural industry in British Columbia was concerned.

The total production was \$65,384,556, being an increase of 32 per cent. over the year 1918; this being due to some extent to the high prices prevailing.

The fruit crop was the largest on record, there being a notable increase in apples and small fruits—4,341 cars of tree fruits being shipped and 327 cars of small fruits. Grains and fodder crops did well, fall wheat and oats especially showing an increase in acreage and yield also.

Live Stock held its own, poultry and egg production showing an increase of 26% for the year. The quantity of meats marketed showed an increase of 9%; whilst dairy products, especially cheese, were well ahead of previous records.

The steady influx during 1920 of a good type of settler from Dominion points and from adjoining States to the splendid valleys of Central British Columbia will materially augment the production from these newly settled districts, and although the Statistics for 1920 are not yet available, a record is again confidently expected for the Province.

### High Prices in 1919

The bond market was, as is well known, very strong in the first six months of 1919. The high-water mark for any Canadian bond was reached in June, when the Victory loan twenty-year 5½ per cent. bonds sold at 106½. All the issues were at a substantial premium. The summer brought the unpegging of sterling exchange, however, and a flood of Canadian securities held in the United Kingdom, coupled with a general decline in security prices on this continent, carried prices down several points during the last six months of the year.

### The Third Victory Loan

In the fall the third Victory loan, which was the last domestic war loan, was issued. Five and fifteen-year bonds were again issued, dated December 1, 1919, with interest at 5½ per cent., and the price was again 100 and interest; \$300,000,000 was asked for and subscriptions totalled \$678,000,000, which, while not up to the preceding figure, still made the loan a distinct success. The fact that these bonds were subject to income tax, and that an income tax had been levied by the federal government in 1917, and increased in 1918 and 1919, was the main handicap encountered.

### Market Control Resumed

The bonds of the third Victory loan have never been listed. Moreover, the first and second Victory loan issues were removed from the stock exchanges on January 22, 1920. A committee similar to the former one has handled all trading since that date. In a statement issued by way of explanation the chairman of the new committee said:

"Under an arrangement entered into by the Bond Dealers' Association of Canada and the members of the Toronto, Montreal and Winnipeg Stock Exchanges, all maturities of 1917 and 1918 Victory loans are now placed under the control of the market committee, along with the 1919 issue, and trading under the auspices of the committee will commence this morning. This is a resumption of the plan which was so successful following the 1917 and 1918 Victory loans. The bonds now listed on the exchanges will continue to be quoted there, and the records of transactions will appear as before."

The prices fixed for the bonds were as follows:—

Maturity	Buying	Selling
1922	99¾	100¾
1927	101¼	101¾
1937	104	104½
1923	99¾	100¾
1933	102	102½
1924	99	100
1934	99	100

It will be noticed that the spread in the case of the maturities of the first two issues was reduced to one point. What was actually done was that the middle price was called the fixed price, to which a commission of ¼ was added on sales, and from which a commission of ¼ was deducted on purchases; both commissions were appropriated by the committee, however, and the ½ per cent. paid to the firm disposing of the bonds.

On February 23 it was found necessary to cut the prices, these being fixed as follows:—1922, 99; 1923, 99; 1924, 97½; 1927, 100; 1933, 100; 1934, 97; 1937, 101.

These prices were the net cost to the buyer. Instead of adding a commission on sales prices and deducting a commission from purchase prices, the latter were fixed at one point below the sales prices in each case. This made a margin of one per cent. on all issues, instead of one-half of one per cent., as formerly. The inferiority of the 1924 and 1934 bonds, because of their taxability, is evident from the specially large reduction in their price.

### Embargo on Purchases Abroad

Coincident with this reduction in prices was the imposition of a voluntary embargo on the purchase of securities from abroad. This was on February 26. It took the form of a request to dealers and brokers. A statement issued by the Bond Dealers' Association said:

"The bond dealers and stock exchanges have been in conference to-day with regard to the proposal of the minister of finance concerning the importation of securities into Canada.

and have reached a decision to grant the minister's request, and to co-operate to the fullest extent. The decision has been made necessary by reason of the great quantities of Canadian securities coming over from Britain, which has been financing Canada for the last fifty years. The drop in sterling exchange made it possible to ship these securities to Canada at prices that were very attractive, as compared with other Canadian securities, including Victory bonds.

"The first step taken by the minister of finance was when he realized that, if the market committee was to continue to distribute bonds in the same satisfactory manner as in the past, the prices of those bonds should be brought into line with market conditions. This was done by the reduction in price of Victory bonds; in fact, many people think that these prices, as readjusted, are really lower than they should be.

"The next step was to request the bond houses and stock brokers who have been bringing securities from Great Britain not to continue this activity, and the banks were requested to co-operate in this direction. The members of the Bond Dealers' Association and the Montreal and Toronto Stock Exchanges have all met, and, while it means a serious loss of business to the bond houses, and also to the stock brokers, all these bodies have agreed to meet the request of the finance minister to the fullest possible extent.

### Finance Minister's Statement

Sir Henry Drayton, the finance minister, said in an interview at the time:—

"Owing to the fall in value of the pound sterling on this side of the Atlantic a large quantity of Canadian securities held overseas have been dumped on the Canadian market. The securities sold are, for the most part, not direct government obligations, but many of them are guaranteed by the Dominion and provincial governments. These outstanding obligations, whose absorption or liquidation ought to be temporarily stopped, represent to a large extent the working capital of the country. They include the obligations of our municipalities, railways, and industries. After extended conferences with bond dealers, stock brokers and bankers, it has been determined that the sale of the securities held overseas on the Canadian market must be discouraged and, so far as possible, stopped. Effective steps for this purpose in the direction of the financial channels through which such transactions take place have been taken. This action is not taken through any compelling law, but is wholly induced by a common-sense recognition of the business requirements of the country. The purchaser of these long-date obligations, in addition to taking essential capital out of the country, as settlements are made on New York, still further depreciates the value of the Canadian dollar there, and renders still more difficult trade with the United States and the discharge of our obligations in that market."

### Recent Changes in Prices

On March 22 the prices were advanced to the following:—1922, 99½; 1923, 99¾; 1927, 100; 1933, 100½; 1937, 102; 1924, 98½; 1934, 97.

Another advance for most of the maturities was made on March 27, as follows:—1922, 100; 1923, 99¾; 1927, 100½; 1933, 101½; 1937, 103; 1024, 99; 1934, 97.

On April 27 it was found necessary to cut the prices to the following:—1922, 99¼; 1923, 99¼; 1927, 100; 1933, 100½; 1937, 102; 1924, 98½; 1934, 97.

Another reduction was made on May 3, as follows:—1922, 99; 1927, 99½; 1937, 101; 1923, 99; 1933, 99½; 1924, 98; 1934, 96.

The next change was made at the end of August, to the following:—1922, 98; 1923, 98; 1927, 97; 1933, 96½; 1937, 98; 1924, 97; 1934, 93.

All the prices which have been fixed by the committee are shown in the accompanying table.

On November 29 all the Victory Loan issues were removed from control and listed on the stock exchanges. They suffered a loss of several points each, the lowest being reached about noon. Thereafter there was a steady recovery, and day-to-day trading up to late in December, while showing slight fluctuations in both directions, found prices gradually improving. Up to December 23rd no action had been taken regarding the embargo.

# Ten-Year Comparison of Bond Prices

Lowest Point Reached in 1920—Last Two Months Witnessed Strengthening, However—May be Less Borrowing in 1921, but Some Provinces and Cities are Already Heavily Committed

By C. H. BURGESS

C. H. Burgess and Co., Bond Dealers, Toronto

THE year 1920 opened with a promising bond market, until there was a very severe drop in sterling exchange. Immediately, the English holders of Canadian bonds began to sell them in this market, and the lower sterling exchange went, the cheaper the bonds were bought. This continued until about the end of February, when the matter became so serious that the minister of finance, in order to protect the prices of Victory bonds and conserve Canadian bank deposits, asked the bond dealers to refrain from bringing more of these bonds into Canada. He asked the banks to co-operate. The bond dealers expressed their willingness to do this, providing the minister of finance would check the importation of luxuries from outside the country, which was having more to do with creating an adverse exchange situation for Canada than the bonds that were being imported. The minister promised to do what he could, but, owing to the delicate position of trade between Canada and the United States, he could not put an embargo on, but tried to accomplish the same thing by putting a heavier duty on luxuries coming in from that country.

The coming in of these sterling securities demoralized the market. One could not tell what bonds were worth, as the next day they might be undersold by imported securities.

## Provinces Were Heavy Borrowers

Some large sales were made at the beginning of the year, the most important of which were \$3,000,000 by the province of Ontario in January, bearing 5½ per cent., and maturing at the end of ten years. These brought about a 5.70 per cent. rate. This was followed by another loan, in which they got their money at about 5.80 per cent. The province of British Columbia offered \$2,450,000 of bonds, bearing 5 per cent. and maturing at the end of five years, the bonds being payable in the United States or Canada. The province secured its money at around a 5.60 per cent. rate.

About this time the New York funds began to rise very decidedly and the premium increased steadily until it reached about 17 per cent. This enabled Canadian municipalities, who issued bonds with the coupons payable in United States gold, to borrow their money for the time being at attractive rates. Of course, it cost them a lot to pay the coupons when they became due, but most of them accepted this, expecting to be able to redeem the bonds to advantage as they became due. Manitoba also issued about the beginning of the year \$4,000,000 of bonds. Toronto Harbor Commission issued \$2,000,000 of bonds. Greater Winnipeg Water District issued \$1,000,000 and the province of Saskatchewan issued \$3,500,000 6 per cent. five-year bonds. All this time bonds were coming in from England in very large amounts, and it began to embarrass people who contemplated tendering for bonds that were not payable in New York.

Around March Toronto bonds would sell at about a rate to yield 5¼ per cent.

## Victories Controlled Market

The selling prices of Victory bonds at this time, which really was the controlling feature of the market, outside of New York funds, were as follows:—

Maturity.	Price.
Dec. 1, 1922 .....	99½ and interest
Nov. 1, 1923 .....	99¼ " "
Dec. 1, 1927 .....	100 " "
Nov. 1, 1933 .....	100½ " "
Dec. 1, 1937 .....	102 " "

## 1919 Victory Loan:

Nov. 1, 1924 .....	98½ and interest
Nov. 1, 1934 .....	97 " "

The prices of bonds had been kept down to these figures owing to the large amounts coming on the market:—

Provincial bonds (Prov. Ontario)	5.60% to 5¾%
Toronto bonds	5¾%
Smaller cities	6%
Township bonds	6% to 6½%
County	6% to 5¾%
Town bonds	6¾%
Village bonds	6½% to 6¾%

## Weakness Around Midsummer

However, the market declined very rapidly and by June the prices were about as follows:—

### Victory Bonds:

Maturity.	Price.
Dec. 1, 1922 .....	99 and interest
Nov. 1, 1923 .....	99 " "
Dec. 1, 1927 .....	99½ " "
Nov. 1, 1933 .....	99½ " "
Dec. 1, 1937 .....	101 " "

## 1919 Victory Loan:

Nov. 1, 1924 .....	98 and interest
Nov. 1, 1934 .....	96 " "

Provincial bonds (Prov. Ontario)	6% to 6½%
City bonds	6¼% to 6.20%
Township or town bonds	6% to 6½%
County bonds	6.40% to 6%½%
Village bonds	6% to 6¾%

## Western Municipals in Bad Repute

I am not making any reference to the town bonds in the provinces of Saskatchewan or Alberta. Owing to a number of defaults by some of the municipalities in Saskatchewan and Alberta, there is practically no market for these securities whatever. It is fortunate that these municipalities have not found it necessary to borrow very much money, as they would have been faced with the position of finding their credit destroyed and the market practically closed to them.

July and August were very dull months, and brokers were looking forward to a fine market in the fall, when much money seemed in sight on account of the excellent crops promised. However, the crop was not sold as readily as expected, so that money did not become easy. On November 29th, the minister of finance suddenly and unexpectedly abandoned the market committee controlling Victory bonds and this had an unsettling effect for a few days. On top of this, the province of Ontario brought on an issue of \$16,000,000 of 6 per cent. 15-year bonds, which were sold on a basis to yield 6¼ to 6.6 and 7 per cent., the lowest price Ontario bonds ever sold at in Canada. This was handled with great rapidity and in an unique manner by a syndicate of eighteen Toronto bond houses. Inside of three days the whole issue was disposed of, and was selling at a premium on issue price.

## Stronger Market in December

Victory bonds recovered immediately they were thrown on the open market, and within a week most maturities were above the committee's prices. Towards the end of the year the prices were as follows:—

The outlook for 1921 seems to be in the direction of cheaper money and fewer issues of bonds by the many municipalities, but very large issues by the city of Toronto and the province of Ontario. I would therefore, expect a noticeable advance in the prices of all high-grade securities, barring political troubles of a serious character which the growing unemployment might bring about.

The following is a comparison of approximate bond prices since 1910:—

1910

- Provincial Governments, about 3.90 per cent.
- Large cities and counties, 4 per cent., 4¼ per cent. to 4¾ per cent.
- Large towns and townships, 4½ per cent. to 4¾ per cent.
- Village bonds, 4⅞ per cent. to 4¾ per cent.

1911

- Provincial Governments, 4 per cent. to 3.90 per cent.
- Large cities and counties, 4⅞ per cent., 4¼ per cent. to 4¾ per cent.
- Large towns and townships, 4½ per cent., 4¾ per cent. to 4¾ per cent.
- Village bonds, 4¾ per cent. to 4⅞ per cent.

At the end of the year prices for Ontario bonds were about as follows:—

- Provincial Governments, 4 per cent. to 3.90 per cent.
- Large cities and counties, 4⅞ per cent., 4¾ per cent. to 4½ per cent.
- Large towns and townships, 4½ per cent., 4¾ per cent. to 4⅞ per cent.
- Village bonds, 4⅞ per cent. to 5 per cent.

1912

- Real estate boom commenced to fail.
- Provincial Governments, 4¼ per cent. to 4 per cent.
- Large cities and counties, 5 per cent. to 4½ per cent. Counties selling at about 5 per cent. City of Toronto 4½ per cent. to 4¾ per cent.
- Large towns and townships, 5¼ per cent. to 5 per cent.
- Village bonds, 5½ per cent. to 5¾ per cent.

1913

- Real estate boom collapsed. Hard times.
- Provincial Government debentures sold as low as a rate to yield 4.40 per cent.
- Large cities and counties at 5¾ per cent. to 5 per cent. (Counties selling at about 5½ per cent., city of Toronto at about 5¼ per cent. to 5 per cent.)
- Large towns and townships from 6½ per cent. to 6 per cent.
- Village bonds from 6¾ per cent. to 6½ per cent.

1914

August 1st.—The commencement of the great war. German rush for Paris. About March to May, 1914, the prices for debentures ranged as follows:—

- Provincial Government debentures, 4¾ per cent. to 4¼ per cent.
- City of Toronto, 4¾ per cent. to 4½ per cent.
- Ontario counties, 4⅞ per cent. to 4¾ per cent.
- Large Ontario towns and townships, 5¼ per cent. to 5 per cent.
- Ontario village bonds, 5½ per cent. to 5¾ per cent.

- Western city bonds, such as Calgary, Edmonton and Regina, 5¾ per cent. to 5¼ per cent.
- Smaller western towns sold from 6 per cent. to 5¾ per cent., and smaller places still from 6¼ per cent. to 6 per cent.

School districts and western villages from 7¼ per cent. to 7 per cent.

1915

Great war and deadlock on west front. German advance against Russia.

From March to about May prices reached their highest level or lowest yield rate. At this time, Ontario provincial bonds were selling to yield about 4.80 per cent.

- City of Toronto, 4.95 per cent.
- Ontario counties, 5 per cent.
- Moderate Ontario cities, 5¼ per cent. to 5⅞ per cent.
- Large Ontario towns and townships, 5¾ per cent. to 5¼ per cent.
- Ontario village bonds, 5¾ per cent. to 5½ per cent.

- Western city bonds (Calgary, Edmonton, Regina, etc.), about 6 per cent.
- Smaller western towns, 6¼ per cent. to 7 per cent.

School districts and western villages, 7¼ per cent. to 7 per cent.

However, it was not long until these prices were materially changed, so that in the fall of the year the prices were about as follows:—

- Provincial Government bonds (such as Ontario), 5¼ per cent. to 5¾ per cent.
- City of Toronto, 5¾ per cent.
- Small Ontario cities, 5¾ per cent.
- Good Ontario towns, 5¾ per cent.
- Western cities (such as Saskatoon, Calgary, Edmonton), 6¼ per cent.
- School districts, 7½ per cent.
- Villages, 8 per cent.

1916

Supply of municipals limited; demand from a new market, the United States, large. After marketing of war loan in the fall, prices stiffened.

- Dominion Government bonds yielding 5¼ per cent. to 5½ per cent.
- Province of Ontario bonds yielding 4.80 per cent.
- British Columbia and Alberta bonds yielding 5½ per cent. to 5.30 per cent.
- City of Toronto and Montreal bonds yielding 4.90 per cent. to 4.85 per cent.
- Saskatchewan, Manitoba and medium-sized Ontario cities bonds yielding 5.20 per cent. to 5.10 per cent.

- Ontario towns and townships bonds yielding 5¾ per cent. to 5¼ per cent.
- Ontario village bonds yielding 5¾ per cent. to 5½ per cent.
- Western city bonds (Calgary, Edmonton, Regina, etc.), yielding about 5¾ per cent.
- Western school districts bonds yielding about 6½ per cent.

CORRESPONDENCE INVITED

1917

United States entered the war in spring of 1917, so that Canadian borrowing in that field practically ceased. Similarly no help could be derived from the United Kingdom. Canada, had therefore, to be financed at home, and a domestic war loan of over \$400,000,000 was successfully floated in November.

Dominion, 5½ per cent. to 5⅝ per cent.  
Province of Ontario, 5.90 per cent.  
Large cities and counties, 6 per cent.  
Medium-sized cities and towns in Ontario, 6¼ per cent. to 6⅝ per cent.  
Saskatchewan, Alberta and British Columbia provinces, 6½ per cent. to 6¼ per cent.

1918

Province of Ontario 6's, par to 100½.  
Western Provinces bonds, to yield about 6¼ per cent. to 6.20 per cent.  
Ontario large cities, to yield 6 per cent.  
Ontario large towns and small cities, to yield 6¼ per cent. to 6⅓ per cent. Ontario counties, to yield 6 per cent. Ontario small towns and townships, to yield 6½ per cent. to 6¼ per cent.  
Large cities in the west, to yield 6¾ per cent.  
Large towns in the west, to yield 7 per cent.  
School districts in the west, to yield 7 per cent.

1919

Province of Ontario, to yield 5.10 per cent.  
Western Provincial bonds, to yield about 5.20 per cent.  
Ontario towns and cities, to yield about 5.10 to 5.05 per cent.  
Large Ontario towns and smaller cities, to yield 5.25 to 5⅓ per cent.  
Small Ontario towns, to yield about 5⅝ to 5½ per cent.  
Large cities in the west, to yield about 5¾ to 5⅝ per cent.  
Large towns in the west, to yield about 6 per cent.  
School districts in the west, to yield about 6.25 to 6⅓ per cent.

1920

Province of Ontario, to yield 6.40 per cent.  
Toronto, Hamilton and Ottawa, to yield 6½ per cent.  
Counties and townships, to yield 6½ to 6¾ per cent.  
Small cities and large towns, to yield 6¾ to 7 per cent.  
Villages, to yield 7 to 7¼ per cent.  
Western cities (Calgary, Regina and Edmonton), to yield 7½ to 8 per cent.

## Record Number of Large Companies Incorporated

Riordon Company, Gatineau Company and Laurentide Company Head List as Regards Authorized Capital—Mining, Manufacturing, Trading and Finance all Represented in List of Ten Million Dollar Corporations

**M**ILLION-DOLLAR corporations are yearly becoming more numerous in Canada. In fact it is ten-million-dollar companies which are now taking the lead in large-scale operations. The following list of companies incorporated in 1920 (up to December 1) with authorized capital of \$10,000,000 or over, illustrates how varied are the fields in which these huge companies operate:—

Canadian Fish Products, Ltd., Halifax, \$15,000,000; International Petroleum Co., Ltd., Sarnia, \$20,000,000; British Columbia Sugar Refining Co., Ltd., Vancouver, \$10,000,000; British Foundation Ovens, Ltd., Montreal, \$10,500,000; Consolidated Asbestos, Ltd., Montreal, \$10,000,000; Laurentide Co., Ltd., Montreal, \$35,000,000; Partners Securities Corp., Ltd., \$10,000,000; Belge Paper Co., Ltd., \$15,000,000; Dominion Engineering Works, Ltd., Montreal, \$10,000,000; Gatineau Co. Ltd., Montreal, \$45,000,000; Belgo Paper Co., Ltd., Montreal, \$20,000,000; Riordon Co., Ltd., Montreal, \$80,000,000; Mount Royal Hotel Co., Ltd., Montreal, \$10,000,000; Northern Mexico Power and Development Co., Ltd., Toronto, \$13,000,000; Famous Players Canadian Corp., Ltd., Toronto, \$15,000,000; Provincial Paper Mills, Ltd., Toronto, \$10,000,000; Anglo-American Motors, Ltd., Toronto, \$10,000,000; Brazilian Development Corp., Ltd., Toronto, \$50,000,000; Fort William Paper Co., Ltd., Toronto, \$15,000,000; Canadian Associated Goldfields, Ltd., Toronto, \$30,000,000.

The ten-million-dollar list in 1919 was much smaller, being as follows:—

The Lake Huron Steel Corp., Ltd., Goderich, \$15,000,000; Goodyear Tire and Rubber Co. of Canada, Ltd., New Toronto, \$30,000,000; Kipawa Co., Ltd., Montreal, \$20,000,000; United States Rubber Co. of Canada, Ltd., Montreal, \$20,000,000; Sir Mortimer Davis, Inc., Montreal, \$10,000,000; British foundation Ovens, Ltd., Montreal, \$15,000,000; Havana Marine Terminals, Ltd., Montreal, \$30,000,000; Simmons, Ltd., Montreal, \$10,000,000; Allied Packers of Canada, Ltd., Toronto, \$10,000,000; International Bushings, Ltd., Toronto, \$25,000,000; Canadian-American Resources, Ltd., Toronto, \$50,000,000.

A record number of companies with capital of \$1,000,000 and over was organized in 1920. The list (up to December 1st) is as follows:—

### Alberta

Calgary, Alta.—Davis Dabro Farm and Ranch Co., Ltd., \$1,500,000; McLaws Co., Ltd., \$1,250,000; Eldon Mines, Ltd., \$1,000,000; Mud Butte Oil Fields, Ltd., \$1,000,000; Coast Timber and Trading Co., Ltd., \$1,000,000.  
Edmonton, Alta.—Gillespie Grain Co., Ltd., \$1,500,000; San Francisco and McMurray Oil Refining Co., Ltd., \$3,000,000.  
Peace River, Alta.—Peace River Western Oil Co., Ltd., \$3,000,000.

### British Columbia

Cranbrook, B. C.—Spruce Mills, Ltd., \$1,000,000.  
Grand Forks, B. C.—Union Mining and Milling Co., Ltd., \$1,000,000.  
Grant, B. C.—Manoose-Wellington Collieries, Ltd., \$3,000,000.  
Nelson, B. C.—Texas Yankee Girl Mines, Ltd., \$2,000,000.  
New Westminster, B. C.—Buckito Development Co., Ltd., \$2,500,000.  
Prince Rupert, B. C.—Alice Arm-La Rose Mining Co., Ltd., \$1,000,000.  
Sapperton, B. C.—Brunette Sawmills, Ltd., \$2,000,000.  
Victoria, B. C.—British Columbia and Albert Power Co., Ltd., \$1,000,000; Victoria-Phoenix Brewing Co. (1920), Ltd., \$1,000,000.  
Vancouver, B. C.—Vancouver Milling & Grain Co., Ltd., \$1,000,000; Wonderphone, Ltd., \$1,000,000; Silver Tip Mining & Development Co., Ltd., \$1,000,000; National Silver Mines, Ltd., \$1,500,000; Mahood Mines, Ltd., \$1,000,000; J. Coughlan & Sons, Ltd., \$3,000,000; McLennan Silver Mines, Ltd., \$1,500,000; North West Silver Mining and Development Co., Ltd., \$1,000,000; Marshall-Wells, B. C., Ltd., \$1,000,000; James Logging Co., Ltd., \$2,000,000; Williams Logging Co., Ltd., \$1,000,000; Lucky Strike Silver Mines, Ltd., \$1,000,000; British Columbia Sugar Refining Co., Ltd., \$10,000,000; Marsh Mines Development Co., Ltd., \$1,500,000; Daily Coal and Oil Syndicate, Ltd., \$1,100,000; E. W. G. Navigation Co., Ltd., \$1,000,000; Liberator Mining Co., Ltd., \$1,000,000; Mexicana Petroleum, Ltd., \$1,000,000; British Columbia Marine Engineers and Shipbuilders, Ltd., \$1,000,000; Canadian Flashlight, Ltd., \$2,000,000; Pacific-Atlantic Construction Co., Ltd., \$5,000,000.

### Manitoba

The Pas, Man.—The Pas Oil, Development and Exploration Co., Ltd., \$2,000,000; Lake Athabassuk Minerals, Ltd., \$1,000,000.  
Winnipeg, Man.—Commonwealth Gold Mines, Ltd., \$2,000,000; Victory Gold mines, Ltd., \$3,000,000; The Pas Lumber Co., Ltd., \$1,000,000; Bingo Mines, Ltd., \$2,000,000; Canadian Mortgage Association, Ltd., \$5,000,000; Granite & Gold Mines, Ltd., \$1,000,000; Bonanza Mining Corporation, Ltd., \$2,500,000; Motherlode Mines, Ltd., \$3,000,000; Stinson Auto Signal, Ltd., \$1,000,000; Canadian and General Securities, Ltd., \$1,000,000; Wolverine Gold Mines, Ltd., \$3,000,000; Eternal Battery Co. of Canada, Ltd., \$1,000,000; Lake Winnipeg Pulp, Paper & Lumber Co., Ltd., \$2,500,000; Deep Rock Gold Mines, Ltd., \$2,500,000; Angus McDonald Mines, Ltd., \$3,000,000; Copper Lode Exploration Co., Ltd., \$2,000,000; Canada Fibre Products, Ltd., \$1,000,000; Winnipeg Motor Cars, \$1,000,000; Parker Motor Car Co., Ltd., \$3,000,000; Tribune Newspaper Co., Ltd., \$1,000,000; Traders' Finance Corp., Ltd., \$3,000,000; Community Loan and Investment Co. of Canada, \$1,500,000; Mam-

## INVESTMENTS

THE present condition of the financial market affords the investor greater opportunities for the safe and profitable investment of funds than for several years past.

Many excellent issues are at present selling below their intrinsic value.

Our purpose is to co-operate with our clients in taking advantage of these exceptional conditions.

## PROTECTION OF SAFETY DEPOSIT VAULTS

Trust companies and other firms renting safe deposit boxes have taken extra precautions during the past few months to meet the epidemic of hold-ups and robberies. At least one repository where \$3,000,000 worth of Victory bonds, stock certificates, wills and other valuable and private papers, and which a boxholder visited the other day for the first time in weeks, had doubled its precautions. The newcomer thought the place was closed. The big door of steel bars was shut, and before it stood a man on guard. The visitor was admitted and the door carefully closed behind him. In the vault chamber itself he did not as formerly open his own box, but an attendant did this for him, putting the steel drawer back again in its place. In this particular safety vault such additional precautions have been in vogue for two weeks.

## NEWFOUNDLAND COAL AREAS

Active steps to develop one of the bituminous coal areas, which for more than sixty years have been known to exist in the island, are being taken by the Newfoundland government. Preliminary work has been started on the deposit on the south branch of the Codroy River, on the west coast of the island, as a result of data provided by an official of the Canadian Geological Survey, who recently examined the property.

All the bituminous coal now used in Newfoundland comes from Cape Breton. This is used for the operation of railroads, factories, mills and steamers. A moderate amount of anthracite is imported from the United States for use in homes and public buildings.

# SASKATCHEWAN

Rich in Natural Resources ; Pre-eminent in Agricultural Production ; Progressive in Methods of Farming and Marketing the Products of the Farm ; and Progressive in Legislation. Saskatchewan needs more Men and more Capital to develop the vast Potential Wealth of this Great, New Province

## Agricultural Production      Natural Resources

In six years, 1915-1920 inclusive, Saskatchewan's cereal crops have amounted to 1,619,041,000 bushels. Saskatchewan's wheat crop for this period amounted to 750,000,000 bushels.

Saskatchewan now produces over half the wheat crop of Canada and leads in quality as well as quantity, Saskatchewan farmers winning the world's prize for wheat eight times in the past nine years.

Saskatchewan holds third place in the Dominion in the number of its live stock, and holds first place for horses and in the number of pre-bred stallions enrolled, these including the leading heavy draft breeds. Great progress has been made in raising the standard of all breeds of live stock and the breeding of pure-bred horses, cattle, sheep and swine has been greatly assisted and encouraged by the Provincial Department of Agriculture and the various Live Stock Associations.

The dairying industry is making splendid progress. A decade ago, Saskatchewan was importing butter by the carload. In 1919 and 1920 the province exported over two hundred carloads of government-inspected creamery butter which commands a high price on both eastern and western markets.

There are between 94,000,000 and 100,000,000 acres of arable land in the province, less than one-third of which have yet been brought under cultivation.

Saskatchewan has billions of tons of coal, the coal formations in the province covering an area of over 4,000 square miles. As all the known coal deposits are of the lignite variety, which

alaks when exposed to the air for any length of time, a Lignite Utilization Plant has been constructed by the Saskatchewan and Manitoba governments and the Dominion government to demonstrate a method of carbonizing and briquetting lignite coal. If the process can be put into general commercial practice, Saskatchewan's vast fields of lignite will become a tremendously valuable asset.

The clay resources of the province are so extensive and varied that it is impossible to give definite information until a complete analysis of the various deposits has been made. Three deposits of "ball" clays suitable for manufacturing chinaware, and five deposits of white burning clays have already been discovered. The province excels in the quality and quantity of its fireclays, and has other deposits from which can be manufactured practically the whole range of structural clay products.

Enough sodium sulphate to supply the world market for a hundred years; deposits of silica sand, 99% pure; discoveries of gold, silver, copper in the far north which as yet are merely reports of prospectors; a forest belt over a hundred miles wide extending from east to west across the entire province, all point to important sources of wealth for future industrial development.

AREA	
251,700 square miles.	
POPULATION	
1914 census	492,432
1916 census	647,835
Provincial estimate 1920	833,267

 HON. W. E. KNOWLES—Provincial Secretary and Minister of Telephones.  
 HON. C. M. HAMILTON—Minister of Agriculture.

## ELECTRICAL WORKSHOP BEING ESTABLISHED

Canada Has Eighty Per Cent. of the Power in the British Empire, and is Surpassed Only by United States— Possibilities for Further Use in Railroad Operation and in Industry

By G. W. AUSTEN

WHEN Lord Desborough, chairman of the British Empire Chambers of Commerce, went back from Canada to Britain he loudly proclaimed his belief that Canada's water-powers would make this country ultimately predominant in manufacturing. He bade the people of the mother country beware of their accustomed industrial superiority. Canada itself, in his opinion, did not realize what precious assets it had.

Electrical development from water-powers has reached a more advanced stage in Canada, in proportion to population, than in any other country in the world. The United States develops about 30,000,000 horse-power, but of this only 7,000,000 horse-power is from waterfalls. Canada develops a total of 2,400,000 horse-power, virtually all from water-powers. The average cost of power in Ontario is about \$12 to the producing company now, and the price to industrial concerns from \$16 to \$20 a horse-power. A cost of \$60 is common in New York state, and very few of the American installations are capable of selling power at less than double the price asked by the hydro-electric system in Ontario or by some of the large Quebec producers which have a surplus for sale.

## Greatest Sources in Empire

The water-powers of the British empire are very large, but Canada has the predominant share. Britain has developed from them only about 200,000 horse-power, India 1,420,000, Australia 130,000, New Zealand 60,000, while Canada has developed 2,400,000, and has much larger development coming. The Chippawa project alone is expected to produce 350,000 horse-power more in two or three years.

If Canada has 80 per cent. of the water-powers of the British Empire it likewise stands high in comparison with foreign countries. It has nearly five times as much power development as Austro-Hungary, eight times as much as Brazil, twice as much as France, four times as much as Germany, one and a half times as much as Italy, twice as much as Norway, twice as much as Sweden, and two-fifths as much as the United States.

## Distribution by Provinces

The Canadian development by provinces is estimated officially:—

	Horse-power.	Per thousand population.
British Columbia -----	312,482	506
Alberta -----	32,080	63
Manitoba -----	76,172	133
Ontario -----	985,060	359
Quebec -----	842,761	376
New Brunswick -----	14,869	41
Nova Scotia -----	26,024	51
Prince Edward Island -----	1,729	19
Yukon -----	13,392	1,574
	2,305,310	276

The water-powers of Canada are estimated at nearly 20,000,000 horse-power. Of this British Columbia has 3,000,000, Alberta 466,000, Saskatchewan 567,000, Manitoba 3,218,000, Ontario 5,800,000, Quebec 6,000,000, New Brunswick 300,000, Nova Scotia 100,000, Yukon 100,000. Surely this indicates as nothing else the industrial possibilities ahead of this country, especially when coal is becoming scarce and will always remain fairly high. In Britain, where the cost of coal is \$15 a ton for domestic purposes, about 80,000,000 tons yearly are used to produce electricity. The cost of power varies from \$50 to \$100 per horse-power. Bituminous coal was \$15 a ton in Ontario this summer, but now has taken a considerable drop, but anthracite coal at \$17 has not weakened, nor is it likely that the price will go back to less than \$12 for many years, or until the freight-rate situation and the exchange situation have righted themselves. The water-produced power in Ontario alone has saved 2,000,000 tons of coal, at an esti-

mated value of about \$25,000,000, in the last year. Our coal import bill of \$70,000,000 can be cut down by a much larger utilization of power, and probably will be when large installations, permanent supply and a low price give assurance to large industrial concerns that they may safely forsake coal and put their faith on electricity.

## Electrification of Railways

One of the problems Canada will have to face in the near future is that of electrification of many of the steam railway lines. Railway engineers point out that, considering the capital cost of the change, it cannot be profitably done at present. The capital could not be obtained at reasonable rates. But the coal bills of the railways are evidence enough of the saving that could be effected in operating costs if the electrical equipment were once installed. The experience of the Chicago, Milwaukee and St. Paul in electrifying 440 continuous miles is distinctly in favor of the economy of the electrical system. For the last three months of 1915, at \$4 a ton for coal, the coal cost was \$200,000. The electric power for the three corresponding months of 1916 cost \$88,000. In equipment the saving is more than half.

If Ontario had enough power from Niagara Falls the whole steam railway system of southern Ontario could be electrified, with far lower operating costs. But, of course, the cost of the transfer is a gigantic item, and at present nothing is likely to be done. The cost of the proposed hydro-radial system is so exorbitant that failure for it is feared, not on account of lack of traffic, but excessive capital charges. The steady growth of power development is, however, tending always to stimulate investigation in industrial and transportation savings, and if in the years to come industry gets sufficient power transportation may well look into the problem. If, as the records of the Chicago, Milwaukee and St. Paul, and of the Butte, Anaconda and Pacific show, 1 kilowatt hour is equal in propulsive power to 6 or 7 pounds of coal, the fact that the one can be furnished at a cent in large blocks, while the latter will cost now at least 3 cents, is too outstanding to be neglected long.

## A Publicly-Owned Monopoly

The recent deal whereby the Mackenzie electrical interests at Niagara Falls, the transmission line to Toronto, and plant and radials in and around Toronto, is acquired by the Hydro-Radial Commission and Toronto is a sign of the rapid development of our power projects. When the Chippawa canal development is complete the hydro-electric system will distribute not far from a million horse-power. It will be by far the greatest electrical distributing system in the world. Ontario will surpass any other part of the world as an electrical centre. Some idea of the savings that may be effected is shown by the fact that the hydro-electric will be able to give power to the Toronto street railway at \$18 a horse-power, while the railway company now pays another Mackenzie company \$25. Eventually Ontario is likely to have a vast public-owned and operated monopoly of power development and traction service.

## Use in Iron Smelting

In northern Ontario, where water-powers are ample, but users scarce, development depends on the establishing of single industries. But if the Dominion government were to bonus the iron ore industry at a rate of \$1 a ton the vast range of ore from Sudbury through to the Minnesota border could be utilized. The average of this is from 30 to 50 per cent., almost as high as the Minnesota ore, and the "beneficiation," alongside wonderful water-powers, would naturally lead to the establishment of electrical furnaces. There are technical difficulties in the way of making original pig iron in electrical furnaces, but when the two main elements are found side by side the smelting business is sure to find some way of establishing itself there. In the next twenty-five years the water-powers of Canada will probably become the basis of new industries with a production of billions, for the iron ore of the Minnesota range is being fast exhausted, the anthracite coal fields of Pennsylvania are being exhausted, the timber and pulpwood reserves of the United States are being fast exhausted, and we shall have all these or else satisfactory substitutes for them. Nature intended Canada to be the great electric iron workshop of the world.

## THE TEST OF SUCCESS

*is simple and infallible -*

**CAN YOU SAVE?**

*Not merely the saving of your money is sufficient; combine this with systematic investment, where it will have certain safety with high interest return, and you are on the right road.*

*We would appreciate the opportunity to tell you of several attractive offerings. May we send you particulars.*

# Stocks Active with Wide Price Variations

Most Stocks Listed on Montreal and Toronto Exchanges Declined During Year—Pulp and Paper Group Showed Strength—Atlantic Sugar's Decline Was Sensation of the Year—Bank and Loan Company Stocks Also Lost Ground

**M**OST groups of stocks listed on the Montreal and Toronto Stock Exchanges sold on a lower price basis during the closing weeks of the year 1920 than at the close of 1919. There were exceptions to this rule, notably the pulp and paper group, which in most cases advanced to new high levels and are closing the present year on a materially higher plane than they were a year ago. Price recessions include not only industrials but banks and loan companies. The bond market did not resist the downward tendency.

A survey of the list of stocks shows that the bulk of shares are even below the low levels of December, 1919. In the utilities, for instance, Bell Telephone has been selling lately at around par, as against a low of 115 a year ago; Brazilian at 35, against 50; Consumers' Gas at 134, against 144; Detroit United at 103, against 112; Duluth-Superior at 13½, against 28; Mackay at 69½, against 73½; Quebec Rails at 22, against 26; Toronto Rails at 45, against 42; Twin City at 47, against 33; Winnipeg Electric at 33, against 35.

The same general characteristic prevails in relation to industrials. British Columbia Fishing has been selling at 49, against 62; F. N. Burt at 94½, against 105; Bread at 19½, against 28; Steamships at 49, against 70; Canadian General Electric at 93, against 103; City Diary at 50, against 56; Dominion Cannery at 29, against 56; Monarch Knitting at 60, against 46; Pacific Burt at 30, against 33; Penmans at 110, against 105; Wm. Rogers at 53, against 66; Russell Motor at 70, against 95; Shredded Wheat at 132, against 145; Tucketts at 45 as against 51.

The equipments show a similar tendency. Locomotive has been selling at 85, against 95; National Steel Car at 4, against 4; Car and Foundry at 34, against 30.

Among the milling issues considerably lower prices prevail. Lake of the Woods has been selling at 135, against 169; Maple Leaf at 134, against 196; Ogilvie at 200, against 293; Western Canada at 115, against 130.

Of the big mine-industrial issues, Smelters is selling lower at 20, against 28; Crow's Nest Pass Coal at 48, against 60; Nipissing at 9.75, against 13.25.

## Earnings Have Been Good

The general run of companies represented in the stock market had done well during recent years and only in the cases of a few companies did the earnings show serious impairment in 1920. Numerous stocks, however, were overbought and the market became top-heavy, with the result that when several strong bearish conditions developed the market gave way rather severely.

The pulp and paper shares and some specialties such as Atlantic Sugar occupied the limelight during most of the year. The steels, textiles, equipments and utilities did not enjoy nearly so much activity on the buying side. The result was that when trouble developed the papers and some specialties suffered severely, while the last-named groups held fairly steady under general pressure. Victory bonds have declined, but the recessions have been moderate as compared with the war issues of other countries.

## Commodity and Money Markets

Up until late summer every condition favored the buying side of the stock market. The money market had been comparatively easy. Trade in the general commodity market was brisk. The incomes of workers were at the peak. Investors were getting liberal returns on their securities.

Then the feeling spread gradually that a change was coming. This was inspired by the fact that the banks unanimously tightened up on their loans. Instructions to the effect that credits should be withdrawn rather than extended

were sent out. The banks had good reasons for their action. The leading bankers of the country had made a careful survey of conditions. Credits had been carried far enough and price inflation had gone too far. Furthermore, huge sums of money were needed for the movement of the crops.

Soon after prices of a few important commodities were reduced materially and then followed an almost general downward revision. Nervousness spread to the stock market. Speculation was checked by sharp advances in call money. A period of suspense ensued which preceded an inevitable slump.

## Pulp and Paper Issues Gain

In the last Annual Review the Monetary Times forecasted that the pulp and paper group would occupy a prominent place in the market and gave as reasons the secure market for pulp and paper, the immense resources of this country, the shortage in other countries, especially in the United States, and the strong business and financial position of most of the Canadian companies represented on the stock market. These conditions hold good to-day and are likely to hold for many years to come. The pulp and paper issues offered speculative opportunities at the close of last year, but they are fundamentally investment securities. The growth in the export business of our pulp companies in recent years has been spectacular and 1920 is outstripping former years. Exports for the first seven months of the current fiscal year aggregated nearly \$104,000,000, an increase over the corresponding period a year ago (which was the then high record) of about 100 per cent. While the prices of some of the higher classes of paper have declined slightly this year end, sharp advances in newsprint are predicted for 1921. The prices prevailing in the various issues near the close of 1920 are compared herewith with the high prices of 1919:—

	— 1919 —		Price Nov. 23, 1920
	High	Low	
Brompton -----	85	87	55
Howard Smith --	115	151	65
Laurentide ----	125	245	192
Price Bros. -----	385	260	150
Prov. Paper ----	117	85	51
Riordon -----	226	191	117
Spanish River ---	125¼	90½	17
Wayagamack ---	150¼	90	45

## Sugar's Meteoric Career

Atlantic Sugar was the individual stock that provided the big sensation of the year's activities. The company's last annual statement revealed large earnings from a substantial volume of business. The shares were placed on a dividend basis and prospects were rosy until somebody made a serious miscalculation. Large volumes of raw sugar were contracted for at top prices, just before the bottom fell out of the sugar market. The shares, which had risen to 168, slumped heavily under the weight of selling to 19. Only at that price was confidence in the stock renewed and a moderate recovery followed.

## Steels on Lower Basis

The steel issues are selling on a much lower price basis than they were at the crest of the 1919 movement and in most cases are somewhat lower than the low of last year. At present levels they look like a reasonably safe purchase.

A feature of the year's developments has been the long-talked-of merger between the Dominion Steel Corporation and the Nova Scotia Steel and Coal Company. While the public have not been especially attracted by the steel group this year the merger is undoubtedly a natural, even inevitable, de-

velopment. The chief steel business of the world is being carried on by colossal corporations. The big Canadian companies have immense resources of iron and coal, but to compete successfully in the world's markets the industry must be operated on a commensurate scale. Whether the merging of big interests in Canada is desirable or not, it is expedient in the present era.

The steel companies suffered from a slackening of new orders and plants have not been running anything like full time. The decline in basic prices had a temporary effect on the steel market, and this, added to coal shortage, made the immediate outlook somewhat certain.

#### Technical Strength of Victories

From a market standpoint the year in the market for Victory bonds has been less favorable than hitherto, but the decline has been moderate as compared with the war bonds of other belligerent countries. United States Liberties have been selling as low as 88 to 96 on the open market, whereas Canada's war loans have been ranging between 90 and 94½, while the Victory loan committee, which up to the end of November controlled the market for the three Victory loans, has been able to maintain the price at 96 to 102, and find buyers. The course of the market for Canada's domestic government bonds may be shown by a comparative table:—

		Rate	Issue price	Close, 1919	Price Nov. 29
1925	War Loan	----- 5	97.5	96 — 96½	91¾
1931	War Loan	----- 5	97.5	96% — 96¾	90
1937	War Loan	----- 5	96	99% — 99%	94¾
1922	Victory Loan	--- 5½	100	100¼ — 98½	96
1923	Victory Loan	--- 5½	100	100	94
1927	Victory Loan	--- 5½	100	102¼ — 100%	94½
1933	Victory Loan	--- 5½	100	100	94
1937	Victory Loan	--- 5½	100	104% — 103	94½
1924	Victory Loan	--- 5½	100	100	92
1934	Victory Loan	--- 5½	100	100	89%

The finance minister announced on November 29 that all Victory bonds would be removed from the control of the Victory loan committee. On that day trading was heavy on the selling side and recessions of from fractions to several points were registered. The bonds were taken up in large blocks, however, at the easier prices, and in view of the fact that no less than \$270,000,000 of bonds have been absorbed by permanent investors through the medium of the Victory loan committee the trend of prices should be upward, at least as soon as the immediate pressure by needy sellers is removed from the market.

The wisdom of the financial authorities in Canada in allowing a rate of interest on the war issues commensurate with current money-market conditions is being confirmed. The private investors of this country have been more inclined to hold the bonds they bought as a permanent investment than the people in the United States. The authorities in the United States made a serious mistake in allowing only 3½ per cent. interest, because at that return the people would not keep their holdings, and huge volumes of the Liberties are still unabsorbed.

It is noteworthy that during the year 1920 the Dominion has redeemed a large volume of the war issues. While complete official figures are not available, the amount redeemed is approximately a hundred million dollars.

As an investment the Victories are a much better buy at the moment than ever before. The yield is higher and the floating supply of bonds has been materially reduced.

The slump in the stock market towards the close of the year has had a healthy effect on the technical condition of the shares. The actual financial and business condition of most of the companies represented is secure. Annual reports of companies recently published have been gratifying. A close study of representative listed stocks on Canadian exchanges at the year's closing prices might be worth while.

As an indication that the lower price movement in the share market is due chiefly to market operations and not primarily to intrinsic conditions, the bank stocks have been selling at a much lower rate than they were a year ago. Com-

merce has been quoted at 185, against 195; Dominion at 193, against 201; Hamilton at 172, against 188; Imperial at 185, against 196; Merchants at 169, against 188; Montreal at 190, against 206; Nova Scotia at 254, against 273; Royal at 191, against 214; Standard at 210, against 209; Toronto at 179, against 194; Union at 140, against 158. The declines were made in the face of an increase in financial strength among the banks.

The loan and land companies' shares, as this year closes, show declines all through the list of several points as compared with the close of 1919, while the unlisted stocks, more actively dealt in here, are selling for the most part on a lower basis.

#### ALBERTA COAL PRODUCTION HIGHER

Alberta's coal production for 1920 will be 30 per cent. in excess of last year's, it is estimated by the government mines branch. A total output of well over 6,500,000 tons is expected by the end of the year, as compared with 5,022,412 tons in 1919. There had already been mined for the first nine months of the year, to the end of September, a total of 4,750,964 tons, the output for September alone being 618,093 tons.

The mines are now reported as running satisfactorily in all fields, and the good lead over last year was experienced throughout November and December. Some difficulty has been encountered from the shortage of cars, particularly at Drumheller, but reports to the government offices indicate that shipments are going steadily forward to the local and prairie markets as fast as cars can be secured.

#### ACTIVE YEAR FOR LAKE STEAMSHIPS

Freight traffic on the great lakes and on the eastern and Pacific coasts during the past year was well above the volume of 1919, and passenger traffic on most lines exceeded all previous records. Speaking for the Canada Steamship Lines, Ltd., which is the largest company operating a service of this kind, J. W. Norcross, president and managing director, said in an interview recently:—

"So far as passenger traffic is concerned our receipts are almost \$1,000,000 in excess of those reported up to this time last year. The steamers operating on all divisions of the system have been patronized to an extent which surpasses all former records, with inquiries as to accommodations for next year of a nature as to indicate that business in 1921 will be well up to this year's record-breaking standards. Our hotels are booked almost to capacity for next year after an excellent season so far in 1920, and altogether the outlook for the tourist business is excellent.

"Freight business on the great lakes has also shown material growth and, with the western crop movement inaugurated in the course of the next ten days or two weeks, our earnings in this department will be well in excess of those of last year. It should be borne in mind, however, that operating expenses of water carriers, like those of the railway systems, have been subjected to substantial increases. Labor is high, with other materials, notably coal, much over the levels of last year, but in the ultimate analysis of the results of 1920 operations I am convinced we shall find that our net earnings will compare very favorably with those of 1919, which were, it must be remembered, the best in the history of the Canada Steamship Lines."

Mr. Norcross stated that ocean-borne traffic had not been up to the 1919 level, but the increases in inland passenger and freight business would more than make up for the deficit in this respect. The current year's receipts from inland traffic would, in all likelihood, be maintained next year, while ocean freights might undergo improvement. "The underlying strength of an organization like Canada Steamship Lines," he stated, "lies in the fact that the company operates both ocean and inland lines. When business is poor in one direction it usually happens that it is profitable in the other. This has been our experience in the past and will likely prove so in the future."

# Shipping and Shipbuilding in 1920

Fall in Rates Makes New Construction Unprofitable at Present Enhanced Cost—Government Merchant Marine Will Probably be Burden to Country—Operation Will Assist Foreign Trade at Expense of Taxpayers

**S**PEAKING at the launching of the "Canadian Leader" late in November, the managing director of the Vickers Company, of Montreal, said that 40 per cent. of Canadian shipyards had "sung their swan song." Unless conditions changed he expected a much larger mortality. The Vickers Company had business to last them until April, and nothing in sight after that.

This condition was typical in most Canadian shipyards in the latter part of the year. It was prophesied in midsummer in an article in *The Monetary Times*. Unless there is new business coming out of an apparently barren atmosphere 1921 will see the reduction of Canadian shipbuilding to at least one-half of its war vigor. The immense impetus given to it by war orders and by the Dominion government's immense shipbuilding programme—a consequence of the war—has ceased, and peace business is being sharply competed for, with contracts scarce. Already first-class tonnage is selling in the British market for about \$100 a ton, and allowing for exchange these ships could be bought for \$75 a ton Canadian money. The lowest contract of the government list is for \$167.50 a ton, and Canadian shipbuilders, like British builders, cannot build at under \$150 a ton. New orders, therefore, are mostly for ships of a type or class not purchaseable in the open market.

## World's Tonnage is Increased

The world now has a tonnage larger than in pre-war times and apparently quite adequate for the reduced international business caused by exchange handicaps. After the great war spending orgy the nations are turning to economy and shipping rates have fallen to one-third what they were—not passenger rates—with cargoes in most lines none too plentiful. All this has a reaction on Canada and Canadian shipbuilding, and it is now not improbable that Canada will have to stand a considerable loss on the government merchant marine, not only as regards capital, but in operating. The first annual report, up to December 31, 1919, showed a profit of \$1,406,000 on 28 completed voyages, but since then cargoes have been slimmer and rates much lower. By the time the two dozen freighters now being completed are put into commission the government marine management may have more tonnage on hand than it can profitably employ.

## Large Contracts Placed Here

The minister of marine announced early in the year that the National Shipbuilding Company, of Three Rivers, had obtained contract for six ships of 5,000 tons d.w., three of 3,200 tons, and two of 6,500 tons, from French sources. The Vickers Company of Montreal had contracts for two vessels for Norwegian interests, the Coughlan yards in Vancouver built steel vessels for foreign use, and other Canadian yards had individual foreign contracts. The Prince Rupert Dry Dock and Engineering Company was in line for a large order from Mexico for cargo, ships and tankers, and the Erb interests of New York were said to be ready to give contracts to this company, but some hitch in financing apparently arose. The C. P. R. placed a contract with a Vancouver yard for a steamship for the British Columbia coastal service, and a lake yard did some business altering a lake steamer for ocean service. The bulk of the shipbuilding was, however, for government account.

## Ship Still to Be Delivered

On the 1st of December the following ships had yet to be delivered to the Government Marine. As will be noticed, they are mostly large ships. Indeed, the tonnage of the 25

vessels is not far under 200,000 tons. The total tonnage contracted for was 380,000 tons:—

Ship.	Tons	Yard	Price per ton
Can. Fisher	5,100	Tidewater Co.	\$200.00
Can. Forester	5,100	Tidewater Co.	200.00
Can. Mariner	8,390	Halifax Shipyards	195.00
Can. Explorer	8,390	Halifax Shipyards	195.00
Can. Winner	8,390	Harbor Marine Co.	198.00
Can. Traveler	8,390	Harbor Marine Co.	198.00
Can. Cruiser	10,500	Halifax Shipyards	180.00
Can. Constructor	10,500	Halifax Shipyards	180.00
Can. Reaper	8,390	Prince Rupert D. D. Co.	190.00
Can. Thresher	8,390	Prince Rupert D. D. Co.	190.00
Can. Squatter	4,575	British-American Co.	215.00
Can. Pathfinder	3,500	Dominion Shipbuilding	180.00
Can. Engineer	3,500	Dominion Shipbuilding	180.00
Can. Commander	8,390	Canadian Vickers Co.	170.00
Can. Leader	8,390	Canadian Vickers Co.	170.00
Can. Highlander	8,390	Wallace Shipyards	167.50
Can. Skirmisher	8,390	Wallace Shipyards	167.50
Can. Rover	3,890	Collingwood Ship Co.	182.50
Can. Coaster	3,890	Collingwood Ship Co.	182.50
Can. Sapper	2,800	Nova Scotia Steel	190.00
Can. Challenger	8,390	Davie Shipyards	167.50
Can. Harvester	3,890	Port Arthur Ship Co.	182.50
Can. Transporter	8,390	Coughlan & Sons	167.50
Can. Freighter	8,390	Coughlan & Sons	167.50

Nearly all the freighters of the eight to ten-thousand class have yet to go into commission. By the first of the year six or seven of the above-mentioned vessels were practically ready for service, and all but four or five of the twenty-five were on the stocks or in the water. These contracts are the basis of Canada's shipbuilding activity. What, then, will happen when they are complete? The government cannot give more, for the sake of giving, not even to provide employment for the large number of workmen or allow returns on the \$100,000,000 of capital. The prices now are too high and unless labor costs are lowered the plants may, with half a dozen exceptions, close down permanently. As an international shipbuilding country we have to compete with the United States and Britain, and the task is not a light one.

## How Costs Have Risen

An insight into what has happened in Canadian shipbuilding costs was provided by the liquidator of the Dominion Shipbuilding Company of Toronto. He furnished a statement showing the increase in labor and material costs:—

	Labor per ton	Material per ton
1918	\$40.00	\$76.00
1919	49.00	116.00
1920	61.00	95.00

The Dominion Shipbuilding Company entered into a contract to build ships at \$180 a ton, and the labor and material alone in 1920 mounted to \$156 a ton, and penalties of \$70,000 accrued through delay, involving an actual loss in construction. It is not surprising that the company went into liquidation. The two freighters unfinished at the yards, the Pathfinder and Engineer, will be finished by the Dominion government as a concession to unemployment in Toronto, yet it was mainly the insensate demands of shipyard workers for more and more wages which produced the result. This has occurred in nearly all Canadian plants at one time and another, and has handicapped the placing of shipbuilding on a safe and sound basis.

The Empire Loan Company issues Debentures in sums of \$100 and upwards for terms of from one to five years, bearing interest at current rates. Sterling Debentures for £25, and upwards, with interest coupons payable in London, England, are also issued. These Debentures are a charge on the Company's Assets, and the Debenture holders are further secured by the deposit of mortgages with a trustee to the amount of one and one half times the total amount outstanding debenture debt.

*Debenture Prospectus may be had on Application.*

**HEAD OFFICE:**

**UNION TRUST BUILDING, - WINNIPEG**

It is no excuse to say that the United States has been equally guilty. Our government ships were built at an average cost of \$190. The cost of the United States Shipping Board vessels was near \$220. British authorities ordered many ships in the war crisis, in the United States, in Canada, in Japan, at prices ranging from \$200 up to about \$215. But that was a war crisis, when the submarine made tonnage valuable at any price. Our government ships now have a capital cost much higher than the market price of British ships. The efforts of the United States Shipping Board to sell some of its thousand or so steel freighters have shown that private purchasers now are unwilling to pay more than about one-half of the cost of building. Unless large profits are earned in the next few years, to bring down the capital cost, the loss will probably have to be written off in order that rates may be based on current market values. The cost of the Canadian government fleet is about \$70,000,000, and by the end of 1921 intrinsic value may not be more than \$40,000,000.

#### No Demand for New Ships

There are no recent figures available to show the comparative cost of operating freighters and the returns from new freight rates. But an official of the Fairchild firm recently showed that passenger ship operation had increased in cost by about 380 per cent. during the war, and rates have increased approximately 180 per cent. On a liner the size of the steamer Calgarian, which is well-known to Canadians, coal which used to cost \$22,500 per trip now costs \$120,000; repairs for the round voyage \$37,500, instead of \$8,500; provisions \$40,000, instead of \$15,000; wages \$45,000, instead of \$12,500. The capital cost would be \$8,500,000 instead of \$2,750,000. There was a cost of \$300,000 per round trip, including interest, depreciation and insurance.

It is no wonder that the Canadian Pacific Company, which has two passenger vessels being completed in the motherland now, has decided that capital costs are too great for any further ordering. Nearly every other ship-operating company has come to the same conclusion.

#### Comparative Costs

The result of the surplus of ships in the world, and of extraordinary high costs of new construction, has been felt in the United States and Britain almost as severely as in Canada. Most of the 140 steel shipyards of the United States have been closed and British orders have been heavily cancelled. On June 1 last United States yards had under construction for private persons 345 steel ships of 1,063,000 tons. About that time British yards regained their supremacy in tonnage in hand. But business for 1921 is poor indeed, for in the matter of steel alone the United States and Canada can now outbid Britain. British steel costs more to make than American or Canadian steel can be laid down in Britain at. Canadian ship plates have been exported to South Africa, Australia and other countries that used to get British plates only. In Britain more than 700 ships are now laid up for lack of sufficient cargoes at rates that will meet the cost of operation. The United States Shipping Board has laid up about 200 vessels and is weekly laying up more. It controls nearly 10,000,000 tons, and in spite of all that it has tried to do, foreign shipping is again carrying the bulk of American exports and imports.

#### Jones Act Started Something

One of the great shipping events of the year was the passage of the Jones act by the United States congress. This would have directly affected Canada if it had been put fully into effect, but President Wilson has declined to obey the most important provisions of the act, and thus the situation stands in abeyance. The act directed the President to abrogate all commercial treaties which required the United States to treat shipping of foreign nations without discrimination respecting port dues, rate privileges, etc. This could not be done without repudiation of signed agreements, but if it had been done the liveliest shipping war ever seen would have been started. Canadian ports would have benefited greatly, because this

country would have been used as the entrepot for foreign goods destined for the United States, and United States goods would have been shipping out via Canada. The great diversion of traffic to Canadian channels would have overcome the threatened discrimination and put our Canadian fleet in an exceptionally advantageous position. Indeed, the Holt line has contemplated moving its head offices from New York to Montreal, and on the Pacific Coast some American shipping concerns also figured on moving to Vancouver to escape the vexatious new restrictions.

#### New Routes Opened Up

During the year steamship services to and from Canada have been much augmented. Private lines as well as the government marine have put on new steamers and opened up new routes. Canada is commercially a much more important part of the world than before the war. Then our foreign trade hardly amounted to a billion dollars a year; now it is more than two and a half billions. The government marine has done much to promote our overseas connections. It is operating now about 40 ships out of the total of 63, and British, West Indian, South American, Australian and New Zealand, Indian, and Chinese and Japanese ports are being regularly traded with. The government marine concluded arrangements with the Holt Line and the British India Steamships to operate alternate steamers from Atlantic ports to British India and to Hong Kong. The Elder-Dempster Line is operating a new service to the West Coast of Africa. The European service is much enlarged.

The conclusion of the West Indies trade agreement, whereby the British colonies of the West Indies, British Honduras and British Guiana give a 50 per cent. preference, in return for the same, has greatly encouraged our southern trade. Canadian cement, pulp and paper products, steel, and other manufactures are being shipped extensively to these southern points. Indeed, our exports of manufactures show signs of outstripping our agricultural exports. Before the war they were only \$43,000,000, now they are \$500,000,000. The growth of Canadian shipping has been of inestimable value in promoting this trade. In 1895 we had 669,000 tons on registry, in 1919 we had 1,091,000 tons, and had become the fifth maritime country of the world.

#### Progress as Maritime Nation

Even if our shipbuilding is reduced, as it cannot avoid being, it will be far larger than before the war, and our net gain as a maritime nation is bound to be large and permanent. Not much advantage has yet been taken of the Dominion government offer of credit assistance to foreign purchasers of Canadian ships to be built. The government got authority to advance 50 per cent. of the cost of any steel ship of more than 3,000 tons, providing that 25 per cent. were put up by the placer of the order, up to a total of \$20,000,000. The loan was to be for five years. Some large orders seemed in prospect through this assistance, but the United States Shipping Board offered more generous assistance, and apparently no advantage of it has been taken. The government is being asked for a direct subsidy on tonnage, but when costs of construction are obviously too high this could not be of more than temporary use. Shipbuilding is a business that cannot be profitably carried on by special subsidy and the shipbuilding companies must make their labor and material costs conform to the new requirements.

The value of British Columbia salmon pack in 1920 was \$13,307,000, according to official figures of the British Columbia Cannery Association. The total number of cases amounts to 1,177,047, against 1,399,156 last year, and 1,616,157 in 1916.

The coal mines of Alberta produced in 1920 approximately six and three-quarter million tons of domestic, bituminous and anthracite coal, a volume greater by half a million tons than the output of 1918, which had previously held the record for the Alberta fields.

The City owns its own light and power plant which has a capacity of 6,000 K.W., and power is sold to manufacturers at from 1.2 cents per K.W. hour up.

Moose Jaw is just completing its new water works which will furnish abundant water for manufacturing and domestic purposes.

Five new industries have been put in operation in the City this year. Moose Jaw is the home of the packing industry of Saskatchewan. The Robin Hood Mills operate in the city 8 distinct factories for the manufacture of food and stock products. Their flour mill has a capacity of 5,000 barrels per day and their rolled oats plant 2,000 cases per day.

The Government Terminal Elevators, situated in the City, have a capacity of 3,500,000 bushels. The South Saskatchewan Co-operative Stock Yards, located in the City, commenced operations in 1919 and now hold third place in the Dominion for volume of traffic handled. The capacity of the Yards exceeds 5,000 heads and its area is approximately 80 acres.

# Legal Decisions on Provincial and Local Finance

## Capital Expenditure of Oil Company Held Assessable for Income in Ontario, and Operations of a Company Are to be Considered Separately—Domicile of Deceased Determines Succession Duty—Powers of Medicine Hat Charter Interpreted

**A**SSESSMENT and taxation are fruitful sources of litigation, and the past year has produced several cases on these and other points in public finance which have reached the higher courts in this country.

### Union Natural Gas Co. vs. Dover Township

Of the cases before the Canadian courts during the past year dealing with questions of public finance, that of Union Natural Gas Company vs. Township of Dover was the most notable and important. The case arose over the assessment of the income of the company under the Ontario Assessment Act, and the Supreme Court of Canada, in affirming the decision of the Supreme Court of Ontario, held that expenditure on the sinking of new wells or the deepening of existing wells by a company in search of oil and natural gas is expenditure on capital account and is not deductible from earnings for the purpose of arriving at the income of a mine or mineral work assessable under the Ontario Assessment Act.

In 1916 the Union Natural Gas Company leased land in the township of Dover, county of Kent, and drilled wells in search of oil and natural gas, but its efforts came to little until 1917, in which year the value of oil and gas produced was \$11,041, and in 1918, when oil and gas to the value of \$93,368 were produced. In its efforts to produce this the company drilled in the township of Dover some twelve wells, of which only two—designated well No. 1 and well No. 7—produced oil and gas, and they produced practically all the oil and gas secured by the company in this township. The two wells in operation were assessed at \$35,000 each, but on appeal to the County Court this was reduced to \$62,376, this amount being arrived at by deducting ground rent and cost of operation from gross income. The company claimed that it had suffered a deficit, for its payments on all wells, whether productive or not, had amounted to \$116,120, which, less the assessed income of 1919, viz., \$62,376, left a deficit of \$53,743.

### Separate Operations of One Company

Meredith, C. J. O., stated that the question for decision was as to the mode of assessing which should be adopted. The Ontario Assessment Act, section 40, provides that the income from a mine or mineral work shall be assessed by and the tax leviable thereon shall be paid to the municipality in which such mine or mineral work is situate, provided that the assessment on income from each oil or gas well operated at any time during the year shall be at least \$20. Then comes subsection 6, which provides for the assessment of mines or mineral work that are being operated. In his Lordship's opinion "each gas or oil well—being a mine or mineral work—is to be treated as a separate entity and the income from it is to be separately assessed." "The assessment in respect of a mine or mineral work is a very different thing from the assessment of a merchant, a manufacturer or mine operator in respect of the business carried on by him. If, as counsel for the appellant contended, the appellant was to be assessed in respect of its business generally, language very different from that which is used in subsection 6 would have been used. What the legislature was there dealing with was land, and it was providing that in the case of a mine or mineral work the land should not be assessed at its actual value or at less than the value of other land in the neighborhood used exclusively for agricultural purposes, but that its value for assessment purposes was to be determined by and be the amount of the income derived from it. It is to be noticed also that it is not the income from the business carried on by the appellant but the income from the mine or mineral work that is to be assessed."

Another case dealing with matters of public finance was that of Barthe vs. Alleen-Sharples, in which the Supreme Court

of Canada held that the Quebec Succession Duty Act was ultra vires the provincial legislature under section 92 (2) of the B.N.A. Act.

The Hon. John Sharples died domiciled in the province of Quebec, and amongst other assets his estate comprised shares in various foreign corporations, whose head offices were not situated in Quebec. The aggregate value of these shares was \$213,039, and the defendant, Margaret Alleen-Sharples, is the universal legatee in ownership. Barthe as collector of provincial revenue sued to recover succession duties in respect of this property.

The article of the Quebec Succession Duty Act in question reads: "All transmissions within the province owing to the death of a person domiciled therein, of movable property locally situate outside the province at the time of such death, shall be liable to the following taxes calculated upon the value of the property so transmitted after deducting debts and charges as hereinafter mentioned."

The Hon. Chief Justice Davies says in his judgment: "I may say that owing to the grave and great importance of the question, I have deemed it right in this appeal again to re-read all these authorities, with the result that I am more firmly convinced than ever that in construing the powers of 'direct taxation' within the province granted to provincial legislatures by our constitutional act, so far as the levying of succession and legacy duties are concerned, the true rule is that which existed alike in Great Britain as in the province of Quebec at the time such act was passed, namely, that the domicile of the deceased owner of the property, and not its actual location at his death, determined which province could impose succession and legacy duties upon it. The whole question was thoroughly thrashed out and determined in the House of Lords in the appeal case of Winans vs. Attorney General, where the rules respecting succession and legacy duties and estate and probate duties are clearly laid down and the reasons for the application of the *mobilia sequuntur personam* rule to the two classes of duties, succession and legacy, are given. They (the noble lords who decided that case) were unanimous in their reasons for the judgment they delivered in determining that so far as succession and legacy duties were concerned the domicile of the deceased owner and not the local situation of the property must be taken as the controlling factor."

### City of Medicine Hat Case

In another case, which dealt with municipal taxation, the city of Medicine Hat referred a stated case to the Supreme Court as to whether it could recover taxes due the city by personal action. The provisions of the statute in question are contained in sections 6 and 7, title 32 of the city's charter, which are:—

"6. The taxes due upon any land may be recovered from any owner or tenant originally assessed therefor and from any subsequent owner of the whole or any part thereof, saving his recourse against any other person, and such taxes shall be a special lien upon the land and shall be collectible by action or distraint in priority to every claim, privilege, lien or encumbrance to every person except the King; and the lien in its priority shall not be lost or impaired by any neglect, omission or error of any officer of the city.

"7. The production of a copy of so much of the roll as relates to the taxes payable by any person in the city certified as a true copy by the secretary-treasurer, shall be conclusive evidence of the debt."

The words of the Hon. Chief Justice Stuart in deciding the case are: "It is apparently well-settled law that a tax is not a debt unless expressly declared to be so by the statute imposing

it. The simple question is whether by the words used in the above sections the court should hold that the statute has declared the taxes to be a debt. The words are practically the same as those of section 305 of the Town Act, and in the case of *Castor vs. Fenton*, the Chief Justice held that under the latter section taxes could be recovered in a personal action as a debt. I cannot but conclude that the real meaning and effect of the statute is to make the taxes a debt, recoverable by personal judgment."

#### DIVIDEND-PAYERS IN ALBERTA OIL FIELDS

The Old and the New Oil Boom—Record of the Southern Alberta Oil Company

BY ANGUS LYELL

A GOOD deal of interest is being taken at present in the possibility of oil being found in Alberta in commercial quantities. Accurate data on what has been accomplished by concerns operating in the province is, therefore, valuable. A few of the companies promoted in the days of the 1914 boom are still in existence, although, largely because of lack of adequate capital, they have not accomplished much. The Imperial Oil Company, Ltd., however, has been prospecting in several districts, and recent reports of what may be an important discovery have created fresh interest in the possibility of valuable oil fields in the province.

Until an official report is issued by the Imperial Oil Company, Ltd., statements regarding the strike at Fort Norman, up north in the Arctic circle on the Mackenzie River, should be materially discounted. The wild rumors of the last "boom" are still fresh in the memory and outsiders should be warned not to credit all stories now in circulation. In due course the Imperial Oil Company, Ltd., will undoubtedly issue an official report.

#### New Field Is Far Away

Fort Norman is at the junction of the Mackenzie and Great Bear rivers, some 1,400 miles north of Edmonton. After leaving the railway at Lac la Biche and travelling some twenty miles to Fort McMurray there is a journey of over one thousand miles by water, up the Chippewyan river as far as Fitzgerald, where the navigation is impeded by ugly rapids, and then through Athabasca lake, the Slave river, Great Slave lake and the Mackenzie river. Even if a rich oil field exists at Fort Norman it will be years before it can be developed. It will be necessary first to build a long stretch of railway so as to provide adequate means of transportation.

While several hundreds of companies were incorporated to prospect in the southern part of the province in the boom days of 1914, the real test of the oil resources of Alberta has yet to be made. Scientific and efficient prospecting can be accomplished only if supported by adequate capital, under competent control. This is what nearly all, if not all, the local companies lacked. It is understood that certain British concerns will enter the field next year, and, if so, some real results may be achieved. The Imperial Oil Company evidently considers indications to be worth while.

#### One Good Dividend-Payer

In view of the developments which may take place it is interesting to consider the operations of the Southern Alberta Oil Company, Ltd., which for the past three years has paid cash dividends. For the sixteen months ending June 30th, 1918, it paid a dividend of 12 per cent. Since then it has paid two annual dividends of 15 per cent. But yet the company shows comparatively little progress.

For the sixteen months ending June 30th, 1918, its sales of crude oil amounted to \$76,730, the net profit being \$60,188. During the next twelve months there was an increased output, the sales totalling \$90,090, with a net profit of \$72,635. For the year ending June 30th last there was a decrease in production, the sales being but \$53,000. This is accounted for partly by damage to the tubing in the producing well, which restrict-

ed the output for the greater part of three months. The net profit for the year was only \$31,228.

The company met with some measure of success in its initial effort. It is its first well which is producing the crude oil. Two others have been commenced but not completed, and the management appears to have decided to continue development of the producing well rather than sink the available capital in further prospecting, which may be a wise policy. The oil, however, has a strong odor which reduces its commercial value. All of the output is sold to a refining company—the Southern Alberta Refineries, Ltd.—which is under the control of the same financial interests. The refining company has been paying cash dividends of 10 per cent.

#### Southern Alberta's Balance Sheet

The outlay for development work and the financial standing of the Southern Alberta Oil Company, Ltd., may be readily seen from the following comparative balance sheet for the past three years:—

	ASSETS		
	As at June 30, '18	As at June 30, '19	As at June 30, '20
Cash in hand and at bank	\$23,020	\$25,883	\$19,405
Accounts receivable	75	49,123	72,479
Equipment, less depreciation	15,476	21,154	20,063
Development account—			
Well No. 1—Cost, less depletion reserve	42,565	33,424	27,724
Well No. 2—Cost	54,539	59,671	63,868
Well No. 3—Cost	2,688	2,688	2,688
Leases of natural gas and petroleum rights	35,000	35,000	35,000
Real estate	8,437	21,273	21,273
	\$181,802	\$248,218	\$262,501
	LIABILITIES		
Accounts and wages payable	\$1,785	\$1,614	\$1,035
Real Estate—Unpaid amounts not yet due		6,336	5,449
Capital—Issued and paid	103,203	103,203	103,203
Surplus	76,814	137,065	152,813
	\$181,802	\$248,218	\$262,501

#### Some Doubtful Assets

It will be observed that the oil rights and leases are valued at \$35,000, being about one-third of the issued capital. This, however, is very modest compared with the value of \$659,130 which Calgary Petroleum Products, Ltd., places on its oil lands and leases, the issued capital of which company is \$930,063. The surplus of \$152,813 is at present largely a paper balance, offset by charges to development account and the value placed on the natural gas and petroleum rights; but if the company is successful in its operations this item may some day have a real value. The cost of well No. 1 is now being charged annually to its earnings. In the year ending June 30th, 1919, it was reduced by \$24,307; in 1920, by \$30,007. This is the proper practice. In a few years' time the initial cost should be eliminated.

The dividend of 15 per cent. now being paid should not be regarded wholly as a return on the capital investment. The business of the company is highly speculative. Its well, the worth of which has been more or less proven, is, as are all oil wells, a wasting asset. Each dividend paid represents, in the first place, a return of part of the capital employed and, only in the second place, payment for the use of that capital. Perhaps none too conservative a basis might be to treat 10 per cent. of the dividend as a return of capital and 5 per cent. of it as the earnings of capital.

But while one or two local concerns may achieve some measure of success in prospecting for oil, the real development will be accomplished by the big financial interests, if oil of commercial quality and quantity does exist in the province. This because of the extent of the initial outlay and the necessity of expert management at all stages of the work.

## JOINT DEVELOPMENT OF FARM AND CITY

Growth of Industrial Centres Raises Farm Values, Says Canadian Reconstruction Association — Rural Depopulation Has Other Causes

BY SIR JOHN WILLISON

*President, Canadian Reconstruction Association*

WITH a circulation of nearly 7,500,000 copies of pamphlets, leaflets, and other written material, and the conduct of special advertising, poster, and moving-picture campaigns since its inception, the Canadian Reconstruction Association begins another year with numerous special educational activities already in hand. It recently gave wide circulation to a new pamphlet on Agriculture and Industry, dealing with rural depopulation, illustrating the general prosperity of agricultural communities throughout the Dominion, and emphasizing the national danger of free trade or of any radical revision of the tariff downward.

It is a common practice of the Grain Growers to attribute the decline in rural population in the Dominion to the tariff. The facts are that the experience of free trade England has not been different from that of protectionist America, nor the history of New South Wales under low tariff different from that of the protectionist states of Australia. The movement of population from farming communities to cities and towns is due to social and economic causes not connected directly or indirectly with fiscal policies, such as revolutionary changes in rural conditions and the multiplication of farm machinery which has displaced a great deal of the farm labor which was necessary in more primitive conditions, rural free mail deliveries, and mail orders systems, which have closed village stores and forced merchants and business interests to seek larger centres. The truth is that industrial development encourages rather than discourages rural prosperity. The evidence seems conclusive that "where industries flourish and expand farm lands rise in value, and that in all those states and provinces of North America in which manufacturing is general, active and prosperous, farmers too are most prosperous and farms of greatest value.

### Manufactures Absorbed Growth of Population

It is significant that in Quebec where manufacturing steadily expands rural population is increasing. Five years ago the total area of land under cultivation in the province was 10,500,000 acres. This year 15,000,000 acres are under cultivation. In a speech at Quebec a few months ago Sir Lomer Gouin rejoiced that through industrial development the movement of population out of the province had been substantially overcome." So the history of the southern states shows that there was no general recovery from the ruin of the civil war "until cotton factories became common and the iron and steel industry had its great development. It was found that milk rose in value, that the market for dairy products increased, that canning factories created a demand for products previously ungrown or unsalable, and that millions of dollars spent in the purchase and transportation of imported food preparations were transferred directly to the pockets of southern farmers. In a single year before the revival of agriculture, Alabama imported canned goods and other food supplies from California and elsewhere to the value of \$110,000,000. In less than a quarter of a century the total assessment of North Carolina has increased from \$1,000,000,000 to \$4,000,000,000. In other states of the south there have been material accretions of wealth and prosperity."

### General Interest Comes First

Dealing with industry, the Reconstruction Association contends that: "There are only two sureties of individual success or collective prosperity. These are industry and efficiency. . . . The man who creates a great industry, turns raw material into finished products and employs labor at good wages is a public benefactor even though he amasses wealth in the process. In these days the labor leader who organizes workmen to demand higher wages, but neglects to emphasize the need of efficiency and greater production, puts a class in-

terest before the general interest. So does the farmer who reduces production in order to increase prices, or the manufacturer who uses a tariff to secure an unreasonable margin of profit. There is a statement by Mr. W. A. Appleton, secretary of the English Federation of Trade Unions and President of the International Federation of Trade Unions, which one would like to have posted in every shop, factory and post office in Canada; read from every pulpit, and printed on the first page of every newspaper. 'Everything depends,' he says, 'upon production. Standards of living cannot be raised, nor can existence be maintained unless mankind accepts this contention. Eloquence, rhetoric or legislative action, whether acting separately or collectively, cannot make the corn grow or build houses, or feed children, or clothe humanity. Only working and thinking can provide the things essential to life and comfort.'

### North Dakota's Experience

The investigation department of the Reconstruction Association has recently made a field survey of the situation in North Dakota with particular reference to the operations of the Non-Partisan League. Its findings are to be published in pamphlet form and will be given wide circulation. North Dakota presented a situation essentially similar to that in western Canada. Like the prairie provinces, North Dakota was largely a one-crop territory, and the farmers there, like the farmers of the Canadian west, were confronted with problems and difficulties directly traceable to pioneer conditions and lack of organization for marketing. Misunderstandings were largely responsible for the agriculturists blaming these difficulties upon the financial and commercial interests. The North Dakota situation provided an opportunity for persons with socialistic connections and ideas to exploit the growing class-consciousness of the farmers and to gain the moral and financial support of the agriculturists of the state for a socialistic programme.

The farmers have derived no noticeable benefit from the experiments of the Non-Partisan League, but the socialistic legislation has not been without its effect. North Dakota has not been able to sell any of its state bonds for the last four years. The \$2,000,000 of North Dakota bonds which constitute the capital of the Bank of North Dakota have up to the present proved unsalable. Many insurance companies and loan and mortgage companies have refused to make new loans in North Dakota, although increasing their investments in other states. It cannot be questioned that the withdrawal of such companies as a source of capital for the farmers has resulted in an increase in interest rates. The report analyzes in particular the state banking experiment represented in the Bank of North Dakota and shows the chaotic state into which the Non-Partisan League policies have brought the government and the banking and industrial schemes of the league.

### Literature Distributed

The chief activities of the association this year have consisted of the publication of its "Ten Commandments for Canadian Trade," urging public support of the home market. These were given wide circulation, no less than 38,000 being distributed throughout the country. As a further step in the conduct of its Made-in-Canada campaign, it issued a special pamphlet on "Ways to National Prosperity" last June. The national situation was the subject of a special speech by the president before the Canadian Club of Halifax, entitled "The Outlook for Canada." This was sent to newspapers throughout the country, to members of Parliament, manufacturers, university professors, school teachers, bank officials, clergymen, secretaries of labor organizations, and municipal libraries. On July 1 the boot and shoe industry in Canada was the subject of a special survey made by our investigation department and presented to the Boot and Shoe Manufacturers' Association of Canada. "Western Factories and Lower Prices" was the subject of another particular leaflet giving extracts from a speech delivered before the Progressive Club of Montreal by Mr. W. D. Cowan, M. P. for Regina, printed by the association and circulated in thousands in the west.

During the year the association has conducted its poster advertising campaign urging home-market development and support, and its industrial films dealing with the iron and

## Buying Movement Ended in Past Year

1920 Started With Activity, and Early Months Were Busy, But Trade Soon Slackened—Business Depression Experienced By Wholesale and Jobbing Houses—Close of Year Finds Numerous Failures and Much Unemployment

THE year 1920 will be marked out in the annals of Canadian trade as the one in which the price index number for commodities attained the high-water mark of a generation and then began an extended period of decline. The cycle of advancing prices lasted about five years, beginning early in 1915, when Canadian industries discovered that instead of collapse due to the war they could make big profits from war business and at the same time carry the entire country through a period of prosperity.

Judge Gary, chairman of the board of directors of the United States Steel Corporation, described the readjustment of prices to lower levels as "healthful." And that is a truth that should be driven home at the present time. The industries and the wholesale, jobbing and retail trades had been set a rapid pace by the public, both at home and abroad, who were buying everything, no matter what the price, because they had ready money. The majority of people are spend-thrifts. Money easily made is easily spent, but this human weakness has one good result in that it makes money circulate rapidly through the channels of trade. Credit was easily obtained. Manufacturers, wholesalers and retail merchants participated in this. Business firms, some of them without much behind them by way of capital, were carried along on the tide.

### Banks Call a Halt

Then an abrupt halt was called by the banks. Credits were sharply curtailed and all departments of trade were instructed to get on a cash basis. The banks could have allowed business to work out its own salvation, but it was judged better to control the process of readjustment, thereby making the change easier for all concerned. All would have suffered by a severe slump in prices, whereas the trade can adapt itself without serious trouble to a decline that comes by slow degrees.

Business firms which are soundly financed will not suffer serious embarrassment. In most branches of trade buying has been carried on cautiously for some months. The mills will go slowly for a time, as retailers are refusing to buy until their shelves are cleared. Sacrifice sales have been prevalent all over the country.

Moderate recessions in the prices of commodities have been widespread. Among the raw materials, grains, wool, hides, cotton, wool and steel have been reduced in price, and this movement has been followed by recessions in clothing, motor cars, sugar, shoes, hardware, live stock, some drugs and many other lines.

### Production Slows Down

In the case of many of the commodities mentioned above the output of factories has been curtailed. Some industries have closed down, but as yet the latter are not numerous. Well-informed students of the markets agree that the partial depression in business experienced at present is only temporary. The hope entertained is that workers will hereafter attend more strictly to business; that when buying of raw materials is resumed by manufacturers it will be at prices sufficiently reduced to permit the retail trade to buy commodities cheaper.

The number of unemployed has increased in recent months but this is largely due to the fact that workers have acquired the habit of picking and choosing employment. The mines

and the lumber camps are calling for men and conditions will force many unemployed to leave the cities.

While it is not expected that the volume of business will shrink to a point where general distress will be felt, at least for a year, the scale of production and consumption will not for many years be as large as it has been during the past three years. It was inevitable that when Europe caught up in the purchase of actual needs, following the devastation and deprivations of war, strict economy would ensue. Retrenchment in buying has already set in. The Canadian government, which had bought heavily in the domestic market, is purchasing much less now.

### Business Casualties on Increase

Business failures diminished in number steadily during the closing years of the war and the ebb tide was reached in July, 1919. Since then the increase, while slow, has been fairly steady. Weak members among all the trades are being eliminated. Houses that have given credit are strict. Little time is given for debtors to pay up. During the nine months of 1919 ending September 30th failures in Canada were 608, as against 433 during the corresponding period in 1919. The assets of firms which assigned were less, being \$723,000, as against \$2,622,000, whereas liabilities increased heavily from \$5,942,000 to \$13,966,000. Conditions in the United States are about the same in proportion. Failures numbered 4,855, as against 4,124 a year ago; assets were \$44,630,000, compared with \$138,394,000, and liabilities \$218,003,000, against \$90,690,000. The trade may expect to witness further increases in failures.

Money for loaning purposes is hard to get. The loan companies found it easy some years ago to secure funds in Great Britain for investment in Canada, but very little is available now. In face of this, the demand for money is keen. Neither farmers nor retailers want to dispose of the commodities they hold at current reduced prices, but in order to hold on they need money. Loan companies are asking 7½, and in some cases 8 per cent., as compared with 7 per cent. previously.

Earlier in the year travellers found business in Canada, both east and west, very active. Large orders were booked. Later in the year, however, the trade grew nervous and cancellations were numerous. It is expected that most of these orders will be renewed and new orders placed when the trade receives announcements of moderate or general reductions in price lists.

### A Redeeming Factor

One important factor that will help to forestall business depression in Canada are the excellent crops in most sections of Canada. It is estimated that total field crops will amount to 1,250,000,000 bushels, which represents close to a billion dollars to the farmers. While accumulated debts on the part of many farmers in western Canada will swallow up profits, the purchasing power of the country as a whole will be fairly substantial.

During the fall the volume of sales among manufacturers, jobbers and retailers was unusually small. In the raw commodity markets the turnover in some lines showed new low records in volume. The turn of the New Year, however, should witness a revival of trade, because by that time returns for crops will be in hand and the readjustment to a lower standard of prices will have been established.

# Legal Decisions Affecting Loan Companies

Sections 6 and 7 of Interest Act, Referring to Descriptions of Interest Payable in Mortgages, Give Rise to Three Important Cases — Rights of First and Third Mortgagees — Bond Given to Guarantee a Loan—Provincial and Dominion Permanent Loan Case

THE Interest Act of Canada continues to require interpretation by the courts. A number of cases of this kind have during the past year reached the higher courts of this country, and a number of other decisions have related to mortgage loans and other affairs of loan companies.

In the case of Canadian Mortgage Investment Company vs. Cameron, the mortgagor entered into the following covenants in a mortgage:

"First: That he will pay to them, the said mortgagees, the above sum of one thousand four hundred dollars and interest thereon at the rate hereinafter specified in gold or its equivalent, at the office of the said mortgagees at the City of Toronto, in the Province of Ontario, as follows: That is to say, in instalments of one hundred and seventy-nine 90/100 dollars half-yearly on the 24th days of June and December in each year until the whole of said principal sum and interest thereon is fully paid and satisfied, making in all ten half-yearly instalments. The first of said instalments to become due and be payable on the 24th day of December, 1907. All arrears of both principal and interest to bear interest at 10 per centum per annum as hereinafter provided.

"Secondly: That he will pay interest on the said sum or so much thereof as remains unpaid at the rate of 10 per centum per annum by half-yearly payments on the 24th days of December and June in each and every year until the whole of the principal money and interest is paid and satisfied, and that after maturity interest shall accrue at the rate aforesaid from day to day, and that interest in arrear, whether on principal or interest, and all sums of money paid by the mortgagees under any provision herein contained or implied or otherwise, shall be added to the principal money and shall bear interest at the rate aforesaid, and shall be compounded half-yearly, a rest being made on the twenty-fourth days of the months of December and June in each year until all such arrears of principal and interest are paid; and that he will pay the same and every part thereof on demand."

## Provisions of Interest Act

The sections of the Interest Act applicable in this and the following two cases are:

Section 6. Whenever any principal money or interest secured by mortgage on real estate is, by the same, made on the sinking fund plan, or any plan under which the payments of principal money and interest are blended, or on any plan which involves an allowance of interest on stipulated repayments, no interest whatever shall be chargeable, payable or recoverable, on any part of the principal money advanced, unless the mortgage contains a statement showing the amount of such principal money and the rate of interest chargeable thereon calculated year or half-yearly, not in advance.

Section 7. Whenever the rate of interest shown in such statement is less than the rate of interest which would be chargeable by virtue of any other provision, calculation or stipulation in the mortgage, no greater rate of interest shall be chargeable, payable or recoverable, on the principal money advanced, than the rate shown in such statement.

## Special Statement Not Required

In this case the Supreme Court of Canada held that as the mortgagor had covenanted to pay the principal and interest in ten half-yearly payments and to pay interest on the principal or so much thereof as remains due at the rate of 10 per centum per annum and the same rate on any sum in arrear, the mortgagee may collect the interest, as section 6 has been complied with, and that if the mortgage shows the amount of principal and the rate of interest calculated as required a special statement, complete in itself, showing the amount of the principal and the rate of interest is not necessary.

## Standard Reliance Mortgage vs. Stubbs

In another case along the same line, the Standard Reliance Mortgage Corporation vs. Stubbs, argued before and decided by the Supreme Court of Canada at the same time as the Cameron case, the mortgagor covenanted to pay the sum of \$700, "together with interest thereon as hereinbefore provided, said principal and interest being payable as follows: The sum of \$8.75 on the first Monday of each month for the period of 135 months, and it is further agreed that the principal is \$700 and the rate of interest chargeable thereon is 10 per centum per annum as well before as after default."

"The purpose and effect of the concluding clause of section 6 of the 'Interest Act' are certainly not as clear as could be desired," said the Court. "Consideration of its terms, however, has led me to the conclusion that it does not prescribe that the mortgage shall set forth the calculation by which the several blended payments or instalments of principal and interest are computed, or that it shall be shown what amount of principal and what amount of interest is comprised in each such payment or instalment. What the prescribed statement is to show is (a) 'the amount of such principal money advanced'—namely, the amount of the principal money secured which has been advanced and is to be repaid in the blended payments; (b) 'the rate of interest chargeable thereon'—namely, the rate at which the interest to be paid is to be computed; (c) The section further prescribes that such interest shall be 'calculated yearly or half-yearly not in advance,' and the 'statement' shall show that it is intended to be so computed. The adjective 'chargeable' clearly relates to and qualifies the word 'rate.' The participle 'calculated' equally clearly relates to and qualifies the word 'interest.' It cannot apply to the word 'rate'; a 'rate of interest' is not 'calculated.' But the 'rate' is distinctly affected by the frequency with which it is calculated or computed and interest in advance is appreciably more advantageous to the lender than interest not in advance. Ten per cent. per annum computed monthly is a rate materially higher than 10 per cent. per annum computed yearly.

"There is nothing in the statute which precludes requiring payment by quarterly, monthly or even weekly instalments of blended principal and interest. But however frequently the payments are to be made, not only must the rate of interest chargeable be stated, but it must also appear that such interest is to be 'calculated' yearly or half-yearly and not in advance.' If the rate be stated to be say 10 per cent. per annum, although this is not an explicit statement that the interest is to be computed yearly, such a computation is implied, and I should regard it as a sufficient statement to that effect and as precluding the computation of interest on any other than a yearly basis. So, too, with the provision 'not in advance.' Unless the contrary is expressly stipulated, I would read a reservation of interest at 10 per cent. per annum as precluding computation of interest in advance. That the interest in such a case is to be computed 'not in advance' is, I think, the reasonable implication from the stipulation. The statement in the mortgage before us that the rate of interest chargeable thereon is 10 per cent. per annum as well before as after default is, in my opinion, a sufficient statement of the rate of interest and that it is to be calculated yearly and not in advance."

## Biggs vs. Freehold Loan and Savings Co.

In the case of Biggs vs. Freehold Loan and Savings Co., also decided by the Supreme Court of Canada, the mortgage was given to secure the payment of the sum of \$20,000 with interest at 9 per cent., payable half-yearly, and contained the following provisos:—

"The amount of principal money secured by this mortgage is \$20,000 and the rate of interest chargeable thereon is 9 per

## Eastern Securities Company, Ltd.

JAMES MACMURRAY, Managing Director

92 Prince Wm. St.,

ST. JOHN, N.B.

193 Hollis Street,

HALIFAX, N.S.

cent. per annum payable half-yearly, not in advance. The said sum of \$20,000 is to be due and payable in two years after date. Provided (1) that on default of payment for two months of any portion of any money hereby secured the whole of the instalments hereby secured shall become payable, and (2) that on default of payment of any of the instalments hereby secured the interest at the rate above mentioned shall be paid on all sums in arrear and also on the interest by this proviso secured at the end of every half-year that the sum shall be unpaid."

The mortgage was in default for over two months, whereupon the whole amount became due and payable, whereupon the savings company claimed that it was entitled to interest at the rate of 9 per cent. on the amount in default, according to the second proviso quoted above, while the mortgagor contended that the company could not collect more than the then legal rate of interest—namely, 6 per cent., and in this case the decision of the court was in favor of the mortgagor, on the ground that the principal sum of \$20,000 coming due under the first proviso quoted above was not an "instalment in arrear."

"The language of these provisos," said the court, "has very intelligible application to the case of the loan where the principal sum advanced and interest thereon at a rate agreed upon are blended together and the sum of the amounts so blended is made payable by instalments until the whole blended sum is repaid, and the effect of the first of these provisos in such mortgage plainly is, that upon any one of those instalments becoming in arrear and continuing so for two months after the day prescribed in the mortgage for payment thereof, then the whole of the subsequent instalments shall become immediately payable in advance, whereupon the mortgagee may exercise all the powers contained in the mortgage for the recovery of the whole amount remaining on the security of the mortgage in anticipation of the day specified in the mortgage for payment of the last instalment."

#### Isman vs. Sinnott

In the case of Isman vs. Sinnott the question arose as to whether a mortgagee holding a first and third mortgage and who foreclosed under the first mortgage could then recover the amount of the third mortgage under the covenant for payment. Isman purchased from Sinnott the Kamsack Hotel. As part payment he transferred to him two mortgages on the King's Hotel, these mortgages being a first and third mortgage made by one John D. Yandt to Isman. Collateral to these two mortgages, Isman gave Sinnott a second mortgage on the Kamsack Hotel, this mortgage containing the following provision:—

"Provided and it is hereby agreed and understood that this mortgage is collateral to two other certain indentures of mortgage dated May 29, 1913, and made between John D. Yandt of Winnipeg in Manitoba, gentleman, as mortgagor, and the said Charles Isman as mortgagee, and that payment in full or in part by the said John D. Yandt under the said two mortgages shall constitute payment in full or in part of this mortgage, and that upon payment of the said mortgages either by the mortgagor therein or by any other person the mortgagor herein shall be entitled to a discharge of this mortgage, and upon default in payment by the said John D. Yandt under the said mortgages and in the event of the mortgagor herein making the payment in full under the said mortgage to the said Jacob Sinnott as provided therein, he shall be entitled to a reassignment of the said mortgages and to a discharge of this mortgage."

#### Neither Mortgage Paid

Yandt did not pay either of these mortgages, assigned to Sinnott, and Sinnott then took proceedings in the Land Titles Office for a sale of the said King's Hotel under the first mortgage, but not being able to find a purchaser, he foreclosed under the act. After the issue of a certificate of title to him, he first mortgaged and afterwards sold the premises and a certificate of title was issued to his purchaser.

The Saskatchewan Court of Appeal on these facts decided as follows: "It is well settled that the foreclosure by a first

mortgagee does not affect the right of a subsequent mortgagee to recover on the personal covenant in his mortgage, even though the first mortgagee has disposed of the property to a third person after foreclosure.

"The defendant could not have foreclosed under the third mortgage except subject to the second mortgage. In order to get his rights under his first mortgage he had to foreclose under it, and thereby free the title he would obtain under the proceedings, from the second mortgage, and this, necessarily, freed it from the third mortgage also, because there is no such thing as tacking under the Land Titles Act. It is true he would be a consenting party to the wiping off the title of both the second and third mortgages, and he would take title under the foreclosure proceedings 'free from all right and equity of redemption on the part of the owner, mortgagor or encumbrancer, or any person claiming through or under him subsequent to the mortgagee, the mortgagee being in this case the first mortgagee.'"

#### Dime Savings Bank vs. Mills

In the case of Dime Savings Bank vs. Mills the court interpreted a bond given to guarantee a loan of \$6,000, and decided upon the liability of the guarantors according to the terms of the bond. The bond was conditioned as follows:

"Now therefore for value received we, the undersigned, L. G. Howell of Galt, Ontario, and Thomas Mills of Kingston, Ontario, hereby jointly and severally guarantee the payment of any and all sums of money which may at any time hereafter be owing and payable by Stearns-Knight Detroit Co. when organized, to said bank, not exceeding \$6,000 at any one time, upon notes, acceptances, endorsements, overdrafts to be made by said corporation when organized, or upon any account whatsoever. Acceptances of this guarantee, notice of default, renewal or extension of time of payment of any part of said indebtedness, any releases thereof, addition thereto or change or other form of security are hereby waived and agreed to. This guarantee is a continuing guarantee covering all indebtedness of said Stearns-Knight Detroit Co., when organized, to said bank, not exceeding \$6,000 at any one time, upon any account whatsoever, until revoked by notice given to said bank."

"The real meaning of the guarantee," said the court, "seems to be expressed in the last paragraph of the bond, where it is said that the guarantee is to be a 'continuing guarantee covering all indebtedness (of the company) to said bank not exceeding \$6,000 at any one time upon any account whatsoever.'"

"I read this as meaning that the sureties were, notwithstanding renewals, extensions, additions or changes, to be liable 'on any account whatsoever' only to the extent of \$6,000 at any time, and that when they chose to revoke by notice they could do so, and their liability being then fixed by the limited account. The limitation of \$6,000 is intended as a protection to the bank, not a prohibition against advancing more than that amount."

#### Decision Regarding Dominion Permanent

The following case deals with the reincorporation of a provincial loan company into a Dominion loan company, in which an agreement was drawn up by which the shareholders of the Provincial Permanent Loan Company accepted stock in the Dominion company of the same name, paid up by the transfer of assets. One clause of the agreement provided "in case the amount of stock to which any shareholder is entitled is a fraction of a share, or a number of shares and a fraction, then in either of such cases the stock to be issued for such fraction shall be one share with the amount of such fraction paid up, and the shareholder to whom such stock is allotted shall have the privilege of paying up the balance of such shares of stock so issued."

Justice Middleton says: "Under the statute then in force, the Loan Corporations Act, 'No shareholder shall be liable for or chargeable in respect of permanent shares with the payment of any debt or demand due by the corporation save only to the extent of the amount unpaid on his shares in the capital stock of the corporation.'"

# The Canadian Appraisal Company, LIMITED

*The Pioneer Appraisal Organization of Canada*

ESTABLISHED 1905.

THE Canadian Appraisal Company, Limited, has now completed fifteen years of service and enjoys to-day an unrivalled position as an Appraisal organization amongst manufacturers as well as Insurance and financial houses within the Dominion.

Several thousand properties have been appraised by us to date. Amongst these are the most representative industrial concerns and those which are "a household word" in practically every line of manufacture, including also all the properties comprising the recently formed "British Empire Steel Corporation, Limited."

## ADVANTAGES OF AN APPRAISAL

Its Appraisal is an expert detailed analysis which establishes beyond question both quantities and values. To be authoritative, such analysis must be made entirely independent of original cost records. It is so planned as to show separately the insurable portions of a property as distinguished from the portions that it is not necessary to insure. It is an authoritative exhibit of values existing before a fire loss, and therefore a tangible, satisfactory and instantly available basis of adjustment should a loss occur. It establishes a sound, authoritative basis of costs and values for operating, accounting, cost finding, taxation, insurance and financial purposes.

"What was done in this case was to issue 100 shares upon which a certain sum was paid up. These shares were accepted; and even if the unpaid balance could not have been called in by the company by reason of the wording of the

agreement, which gave the privilege of payment to the shareholders, the shareholders would remain liable to the creditors by virtue of the statute until the full amount should be paid."

## Power Developments in Canada in 1920

Both Public and Private Enterprise is Active—Ontario Hydro-Electric Power Commission is Completing Huge Work at Chippawa—Quebec Streams Commission Assists Development in Quebec—Keen Interest in Power from Atlantic to Pacific

By LEO DENIS.

Hydro-Electric Engineer, Commission of Conservation

**A**FTER the slight "surge" naturally to be expected in the transition from war to peace conditions, the supply and demand of hydro-electric power in Canada have become stabilized and are now taking a more even but surprisingly active gait. In many portions of the Dominion further installations and new power developments have not yet caught up with the ever-increasing demand for hydro-electric energy. This deficiency of power has been accentuated during certain periods of the past year by the extremely low water conditions in some of our rivers. This low water may be attributed mainly to insufficient and uneven distribution of rainfall which, however, was relieved in certain cases by the use of water from conservation storage. This emphasizes the advantages to be derived by extending this beneficial practice to its fullest extent. The importance of our hydraulic resources has recently been demonstrated by Sir Adam Beck in connection with their utilization in Ontario where he states that the water-power development now made saves over 6,000,000 tons of bituminous coal per year, and it may be added that a proportional saving is effected in a number of other provinces.

### Leading Industries Require Power

The increase in power development results naturally from expansion in a number of industries. In this connection the pulp and paper industry has probably attracted the greatest attention during the past year. Existing mills are adding to their capacity while new ones are under construction or contemplated, particular attraction being shown for the more northerly portions of the Dominion where timber berths are still available and water powers abundant. A large amount of energy is also required for electro-metallurgical purposes for which a total of nearly 1,500,000 horse-power is used in Canada and the United States, and in this connection it is interesting to note that of the total of 160,000 horse-power which we export to the United States a large amount is used for this very purpose. Among other additions to industries requiring a fairly large amount of power may be mentioned textiles, iron and steel manufacture, including special lines of machinery; rolling mills, automobiles and parts, woodworking and furniture, while the resumption of operation in cement mills and other building material plants also accounts for additional power demand.

### The St. Lawrence Project

One of the questions which has attracted the greatest amount of attention during the past year in connection with the combined interests of power development and navigation is the momentous St. Lawrence river project. The two features of navigation and power production have been closely combined in connection with the scheme and, while the former aspect is of much interest in transportation problems to many portions of Canada and the United States, the development of power particularly affects the provinces of Quebec and Ontario.

The St. Lawrence as a primary source of hydro-electric energy has long been considered one of the most valuable assets of the world, but the magnitude of the undertaking has thus far retarded definite action or policy with regard to its

exploitation. The power portion of the river between Lake Ontario and Montreal, involving some 2,000,000 to 4,000,000 horse-power, has to be considered as a whole. Consequently although the United States' share of the total available power is less than that of Canada, yet the project is an international one and has, therefore, to be referred to the International Joint Commission. This body has been conducting, at various centres in Canada and the United States, an extensive series of hearings in connection with the proposed scheme, covering both countries practically from the Rockies to the Atlantic. The physical or engineering problems have been referred by the commission to an international board of engineers who are shortly to report on this phase of the undertaking. But even greater difficulties present themselves from an economic aspect. Now that the Niagara plants are using all the water permitted by treaty the value to eastern Ontario and western Quebec of the St. Lawrence power is greatly enhanced, and it must not be forgotten that errors of judgment and ill-advised concessions would have disastrous consequences to this portion of the Dominion.

### Ontario

The outstanding feature of power development in Ontario is the rapidly approaching completion of the enormous Chippawa development of the Hydro-Electric Power Commission. This plant is to use the maximum available head in the Niagara river and will utilize 305 feet as compared with an average of about 165 feet in the other Niagara plants. The imposing size of the undertaking is evidenced by the five 50,000 horse-power units which are now under contract, while the proposed ultimate installation is to comprise ten of these, or a total of 500,000 horse-power. The permanent works of the development are designed for the latter capacity, which would unquestionably make it the largest water-power plant in the world.

A certain amount of uneasiness has been created by the temporary shortage of power at Niagara, but this should not be taken as a continuing difficulty. In fact it was due, to a large extent, to more or less superficial causes and not to fundamental physical limitations. Instead of extending the present developments, which are relatively inefficient, it was judged that the time was ripe for a more efficient utilization of the possibilities afforded by undertaking the project now nearing completion. Actual construction began in 1917 and was then intended primarily as a war measure to produce munitions. On account of its size this development has taken a longer time to bring into service than might have been possible by quicker but less efficient step-by-step extensions; hence the temporary shortage of supply.

Among the other activities of the Hydro-Electric Power Commission may be mentioned the placing in operation of the 3,600 horse-power plant at High Falls, near Perth; and the steadily progressing work on the construction of the Nipigon plant, located east of Port Arthur, for which the initial installation is 25,000 horse-power, while its ultimate capacity will be 75,000 horse-power. The commission has also commenced work on the power development at Ranney Fall, on the Trent river, near Campbellford; the dam was already

built in connection with the Trent Canal system, and the power plant, which is to be ready in 1922, will have a capacity of 10,000 horse-power and be an addition to the seven power plants already supplying the Central Ontario system. A number of conservation storage reservoirs have also been completed by the commission in connection with their Nipissing hydro-electric plant.

Much progress by private interests is also noted in this province. A new 14,000 horse-power plant, with 28,000 horse-power ultimate capacity, has been placed in operation at Chaudiere Falls, Ottawa. This plant forms part of the system supplying electric energy to Ottawa and Hull and to the nickel and copper refinery at Deschenes, Que. while a 4,000 horse-power hydro-electric plant is contemplated at Cornwall in connection with the textile industry. Northern Ontario has been particularly active during the past year. A 2,000 horse-power hydro-electric plant has been completed near Elk Lake, Ont., the power being used mainly for mining. Other plants under construction include 2,000 horse-power on the Blanche river near Englehart; 25,000 horse-power for the Abitibi Pulp and Paper Company; 9,000 horse-power for a pulp and paper mill at Kapuskasing, west of Cochrane; while contemplated developments for mining include 5,000 horse-power at Indian Chute on the Montreal river, and another on the Kamiskotia river west of Timmins.

#### Quebec

While the province of Quebec has no public undertaking corresponding to the Hydro-Electric Power Commission of Ontario, much incentive and assistance is given to water-power undertakings through the activities of the Quebec Streams Commission. The aim of this commission is mainly to improve water-power conditions through water conservation, storage or otherwise, thus greatly increasing the possible water-power available at various sites, thereby rendering them more attractive. The activities of the commission include water conservation storage reservoirs already constructed and in operation on the St. Maurice, St. Francis and Ste. Anne de Beauport rivers, and surveys for future work on the Chaudiere river, on Lake St. John to increase the flow of the Saguenay river, and on Lake Kenogami. The work includes the study of possible power sites in the settled districts and also in the northern regions, including the rivers of the Abitibi and the north shore of the St. Lawrence.

While the great bulk of power development in this province is under private enterprise, there are also a few developments operated under municipal ownership, and a movement is reported to have recently been initiated by the Union of Municipalities in the province to consider the question of water-power development directly by the government, it being felt that such further development is of material importance to the progress of the province.

Important additions are reported to be in progress at a number of large hydro-electric plants, such as Cedars on the St. Lawrence, and Shawinigan and Grandmere on the St. Maurice. These extensions aggregate an additional capacity of 130,000 horse-power, while a development of 150,000 horse-power is under consideration at Les Gres falls on the St. Maurice river. The city of Montreal has recently contracted for a large block of power to operate its new electric waterworks pumps, the maximum being 15,000 horse-power. The first part of the work in electrifying the harbor railway has been completed; the total trackage is 58 miles, involving an ultimate capacity of some 4,000 horse-power. A new 800 horse-power development to operate rubber works has been completed on the North river at St. Jerome, while new developments or expansions now under construction comprise an addition of 2,600 horse-power at Deschambault; 2,000 horse-power at St. Raphael; 4,000 horse-power at Magog in connection with textile works; and 600 horse-power at Lachute. Among the developments which are contemplated for the near future may be noted an additional hydro-electric plant of 11,000 horse-power capacity to be constructed at Westbury for the city of Sherbrooke; a 500 horse-power plant on the Chaudiere river for the municipality of Megantic; 3,000 horse-power for a pulp and paper mill at Portneuf; a 20,000 horse-power installation is also under consideration for the latter industry in the Lake

St. John region, and one, also of large size, at Chelsea on the Gatineau river; while a number of other projects of the same character have also been under study on some of the other northerly rivers.

#### Maritime Provinces

Unusual activity is to be noted in power development in the maritime provinces, where hydro-electric installation and operation under provincial government control seem to have made a firm beginning. The Nova Scotia Power Commission has a 15,000 horse-power hydro-electric development under construction on the Northeast and Indian rivers to supply Halifax, and it is expected that a portion of the energy will soon be available. The newly-created New Brunswick Hydro-Electric Power Commission has also shown much activity and its initial operations have taken a concrete form. This commission, which was created with a similar object to the one in Nova Scotia, promises to be most useful to power and industrial development, its work comprising the actual construction of hydro-electric projects for the supply of electric energy. Two important developments are being undertaken in connection with which, it may be noted, comprehensive storage possibilities will also be utilized; one project comprises an installation of some 9,000 horse-power on the Musquash river to supply St. John, and the other an installation of some 8,000 horse-power on the Shogomoc river to supply Fredericton. It is expected that these plants will be in operation by the end of 1921. Other possibilities which the New Brunswick Hydro-Electric Power Commission has in view for future requirements include installations ranging from 8,000 to 15,000 horse-power on the Lepreau, Maguadavic, Pokiok and Tetagouche rivers.

Further progress in power development in New Brunswick includes the addition of some 2,400 horse-power to the hydro-electric plant at Aroostook Fall; while the Bathurst Lumber Company are completing a 13,500 horse-power hydro-electric plant on the Nipisquit river to operate their pulp mill and saw mill. A 6,000 horse-power development is proposed at White Rapid on the Miramichi river, and attention has again been called to the desirability of utilizing the Grand Fall on the St. John river. In connection with the last named the provincial government is reported to have threatened to expropriate it from the present owners and to transfer it to others who would develop the power immediately.

In Nova Scotia a number of smaller hydro-electric plants have been placed in operation, among which may be mentioned one of 600 horse-power for Wolfville, 200 horse-power for Berwick, and another to supply Barrington.

#### Prairie Provinces

Provincial hydro-electric transmission lines for Winnipeg river power are being steadily extended in Manitoba. The line to Portage la Prairie has been completed and further additions are planned, an expenditure of over \$500,000 having been authorized. Two hundred reeves are reported to have petitioned the provincial government to extend these hydro-electric transmission lines to the southern portion of the province. The Winnipeg municipal plant is adding three units aggregating some 20,000 horse-power. An oil-engine electric plant of 240 horse-power capacity is under construction for Virden, and the development of water-power at Curry Landing on the Assiniboine river to supply Brandon has again been under consideration.

Among the installations in progress in Saskatchewan may be noted a 7,000 horse-power steam turbine addition to the Saskatoon municipal electric plant, and a small oil-engine electric plant for the municipality of Nokomis.

The production of cheap power is exciting much interest in Alberta. The Associated Boards of Trade of the province have made representations to the Alberta government and have urged its extreme importance.

#### British Columbia

The resumption of greater activity in power development is noted in British Columbia. A 300 horse-power hydro-electric plant has been placed in operation at Squamish north of

Vancouver, while in the interior an important power line extension has just been completed to supply the Copper Mountain mines with energy from Bonnington Falls. A 500 horse-power hydro-electric plant which will have an ultimate capacity of 1,500 horse-power is under construction for mining operations near Alice Arm, and a 125,000-horse-power plant is contemplated on the Bridge river near Lillooet.

#### Future Expansions

Considering the power situation over the entire Dominion, while there has been a temporary shortage in certain locali-

ties, this may be interpreted to a certain extent as a healthy sign of growth and not with alarm, since the primary resources which may be made available in order to satisfy the demand have by no means yet been exhausted. This condition, however, should serve as a warning note for the future. Hydro-electric expansion has been remarkable in Canada, the present installation being over ten times what it was in 1900, and future prospects point to correspondingly rapid progress. But this progress can only last until all our hydraulic resources have been developed, and their exploitation should, therefore, be most carefully and efficiently guided.

## Railways Have Passed Worst Difficulties

Substantial Increase in Rates Was Feature of 1920—Fall in Commodity Prices Make Rates Seem Higher—How Soon Can Operating Expenses be Brought Down?—The Amalgamation of the Grand Trunk With the Canadian National

By GEORGE W. AUSTEN

THE year 1920 will be classified in Canadian railway history as one in which the steam railways reached the peak of their economic difficulties. It will also be notable for the operating consolidation of the Grand Trunk Railway with the National Railways following the acceptance in March by the Grand Trunk shareholders of the government's proposals for the purchase of the road. Thus the national railway system came, during the year, to embrace an operating mileage of about 22,000, and the consolidation left Canada with only two great transportation systems, thereby simplifying, if not lessening, the acute problems yet to be solved.

#### Large Rate Increases Granted

The granting of the large increases in freight, passenger, sleeping car and excess baggage rates by the Railway Commission in August alone saved both the Canadian Pacific and the National Railways from an alarming financial showing for the year. In the previous year the National Railways—then consisting of the Canadian Northern, Transcontinental, Intercolonial and Grand Trunk Pacific—showed a deficit of \$47,000,000. Had it not been for the increases in rates this would have been enlarged in 1920 to at least \$75,000,000. The wages increase that had to be granted in 1920, following similar increases in the United States, would have brought the operating expense ratio of the old Canadian Northern system up to 134 per cent. But the Railway Commission saw fit to grant 40 per cent. additions to eastern freight rates, 35 per cent. to western freight rates, 20 per cent. to eastern and western passenger rates up to 4 cents a mile, 50 per cent. on sleeping and parlor car rates, 20 per cent. on excess baggage, with exceptions made in the case of coal, gravel and milk. This rate of increase applied to the end of the year, and beginning with 1921 a reduction of 5 per cent. is made in freight rates, and 10 per cent. in passenger fares. On July 1 next passenger fares go back to the old basis, and the freight rates question will then come up for revision in the light of conditions as they then exist.

#### Public Opposition Was Strong

The reasons for granting increase involving an extra burden of more than a hundred millions on the people of Canada had to be very strong. The unpopularity of the award led to a forceful appeal to the government, and the decision was referred back to the commission. As this was late in November, and the peak rate of increase ended at the New Year, no change was to have been expected. Indeed, Chairman Carvell had made out a case on which he could rest and let time work out his vindication.

The finances of the C. P. R. were, by common consent, taken as a standard by which Canadian railways were to be judged as regards their rate needs. They had, during the war, received increases totaling 35 per cent, but costs had

gone up at least 100 per cent. The operating ratio of the C. P. R. in 1916 had been 63.87 per cent.; in 1917, 70.01 per cent.; in 1918, 81.19 per cent., and in the six months to June 30, 1920, 87.58 per cent. In July it was 91.43 per cent. This rapid rate of increase had been duplicated in the case of the Grand Trunk. In the year to December 31, 1919, the ratio was 87.43, and in the six months ending June 30, 1920, it was 99.97 per cent. In the case of the old Canadian Northern system the ratio for the first six months of 1920 was 117.61 per cent. These figures show how fast expenses were outstripping revenue and leaving the railways unable to pay fixed charges except out of reserves or capital.

#### Reserves Should Not Be Drained

In the case of the C. P. R. counsel for the western provincial governments argued that the system had reserves of \$317,000,000, but they did not allow for the fact that \$160,000,000 of this was land which had not been sold, and could be sold only piece by piece. Money had been borrowed against this land and \$52,000,000 is due in 1925. The principle that the C. P. R. should not be called upon to cripple itself financially by exhausting reserves to pay current deficits was asserted by Chairman Carvell, who emphasized the importance to Canadian credit of sustaining the position of this premier Canadian security. The financial statement of the C. P. R. showed a surplus after usual dividends of \$844,249 for the year ending December 31, 1919. The wages increase for 1920 was estimated at \$14,822,000—a rate of \$22,000,000 a year—which would have wiped out dividends and left a large deficit. It was estimated that the original 30 per cent. increase asked for by the railways would have left a deficit of \$10,000,000 after the wages increase, and therefore the extra 10 per cent. on freight, the 20 per cent. on passenger rates, etc., was authorized. Seeing that the increases would be in effect only four months for the year, while the wage increase was retroactive to May, even then a small deficit was looked for, but a surplus would result in 1921 that would offset the loss.

#### Will Still Be Deficits

What will be the result of the rates increase on the finances of the Grand Trunk and the National Railways? No statistics on this subject were taken into consideration by the Railway Commission in making the judgment, because if the C. P. R. got only enough increase to enable it to maintain a rate of earnings sufficient to cover dividend requirements, plus usual upkeep, the other railways could not be expected to get on with less. If rates had been made on a basis to make them self-sustaining they might have been doubled at one stroke. Premier Meighen did not hesitate to tell western audiences that the freight rate increases would not enable the National Railways to pay their way, and that annual grants by Parliament to make up the difference would prob-

### Agriculture.

Embraced in the Province are 161,872,000 acres of which it is estimated 1,510,400 acres are covered by rivers and lakes, leaving 160,361,600 acres of land. Allowing approximately 60,000,000 acres for the rough land of the eastern slope of the Rocky Mountains, other mountains and hills, together with certain waste acreage in some small sections of the Province not suitable for cultivation, leaves at least 100,000,000 acres available for cultivation. During the year 1919 more than 8,000,000 acres were actually in crop and the estimated value of farm products for that year was \$149,583,321.89, details of which are included in the following statement:—

	Acres	Bushels	Yield Per Acre	Price	Revenue
Spring Wheat	4,241,903	33,935,224	8.00 bus.	\$1.83	\$62,101,469.92
Winter Wheat	40,600	639,150	16.75 "	1.95	1,246,827.50

<b>Total</b>	<b>\$239,926,913.29</b>

Total acres (Grain), 1919, 7,664,581.

### Coal Industry.

For the first time in the history of Canada, Alberta's coal production in the year 1918 led all the other Provinces.

The following statement shows the production in 1919:—

Domestic	2,611,002 tons	\$ 9,791,283.75
Bituminous	2,325,787 "	8,721,701.25
Anthracite	86,616 "	385,272.00
Briquettes	70,033 "	466,214.50
Coke		
<b>Total Value</b>		<b>\$19,353,471.50</b>

### Wool Production.

The Province of Alberta is now rapidly approaching a premier position in the production of wool. There has been an enormous increase in the number of sheep during the last decade.

The following statement shows the results for the last four years:—

	1916	1917	1918	1919
No. of pounds handled	2,048,340	2,086,633	2,500,000	2,333,819
Price realized, cents	.30½	.57	.60	.60
No. of producers	960	1,150	1,088	1,132
<b>Value</b>	\$624,713.70	\$1,189,830.81	\$1,500,000.00	\$1,400,291.40

### Dairying.

"In creamery butter production Alberta has now third place among all the provinces of Canada, first and second place being held by Quebec and Ontario respectively. Of the four western provinces, Alberta was in 1919 the leading dairy province, although in third place in 1915. The butter output in 1919 was \$10,500,000 and the total value of Alberta dairy products in the same year amounted to well over \$31,000,000. As the result of the standardization of our creamery butter, wider and more appreciative markets have been secured for it. During the past year, substantial quantities were shipped to the large markets in both eastern and western Canada, and to the United States and Europe." (Extract from Budget Speech of Hon. C. R. Mitchell, delivered March 19th, 1920.)

ably still be required for many years, until growth of traffic on the system would increase the earnings relatively to the amount of fixed charges. In 1919 the net operating deficit of the National Railways, not including the Grand Trunk, but including the Grand Trunk Pacific, was \$14,117,000. On the same basis of traffic, but with coal and other supplies and wages up by 30 per cent., the operating deficit for 1920 would have been \$85,000,000 at least.

#### Economic Movements Affecting Traffic

This review of the financial position of the Canadian leading railways is necessary to an appreciation of the critical position in which they were placed during the year. What the future holds may be rather doubtful, because there are many influences at work darkening their future. The growth of the farmer movement, for instance, with its threat of a north-and-south trade instead of a trans-Canadian haul, began to hang over the railways. The business slow-up that began to show itself in the last half of the year reduced tonnage handled, and unless business picks up in 1921 earnings may show a decrease. Like everything else in the inflated war period, the dollar volume of gross earnings grew much larger, and a contraction is inevitable with the lower price of commodities. The drop of grain prices in the crop season made freight rates seem relatively excessive. The farmer who could get only \$1.75 or \$1.60 for his wheat, and had to pay 40 cents to get it marketed would rightly deem his cost far too heavy.

#### Can Operating Costs Be Reduced?

The great problem of the Canadian railways, as well as the United States railways, will be, in 1921, as farther ahead, the reduction of costs in accordance with commodity values and the trend of commercial wages. As the minister of railways said in his annual report last winter for the National Railways, the average wage on the system had risen from about \$700 to nearly \$1,500. The new increases of the year, forced by American unions, will bring the average up to about \$1,800. The average wage of the Canadian manufacturing industry is not more than \$1,000. Granting that the railways employ a much larger percentage of skilled men, and that the average ought to be much higher, it can be easily shown that railway rates of pay have been hoisted out of proportion. If they are reduced as other values come down and permit of rate readjustments downward the railway service will be a help to Canadian development, otherwise it may be a drag on our expansion.

#### Rates in Other Countries

In one of his arguments on the subject of rate increases President Hanna quoted the ton-mile costs and increases in many other countries. This showing was:—

"England—Passenger fares increased 50 per cent.; freight rates increased 25 per cent. to 100 per cent.; average freight increase, 71 per cent.

"France—Passenger rates increased 70 to 80 per cent., freight rates about 140 per cent.

"Belgium—Freight and passenger rates increased about 100 per cent.

"Italy—Passenger rates increased 60 to 120 per cent., freight rates 40 to 100 per cent.

"Holland—Passenger rates increased 75 per cent., freight rates from 70 to 140 per cent.

"Sweden—Passenger rates increased 100 per cent., freight rates 200 per cent.

"Norway—Passenger rates increased 60 to 180 per cent., freight rates 150 per cent."

#### Wage Increases Were Large

These comparisons from Europe are not, however, fairly applicable to the case of the Canadian railways. If the McAdoo award in 1918 had not started the railway unions on the warpath after continuous large increases costs here might have been better controlled in view of the remarkable expansion of tonnage handled during the war. Canadian railways handle only a small fraction of freight tonnage per mile compared with the United States railways, and as a whole cannot

be made to pay until traffic is thickened by a larger settlement. Though the average ton-mile rate in Canada compares favorably, even at the height of the new charges, with that in almost any other country, the long distances goods have to travel in Canada puts an enormous burden on the people. In 1919 the gross earnings of the Canadian railways were \$382,000,000—that is, \$50 per head for every man, woman and child, or perhaps \$200 per family. The cost of what the farmer has to buy is enhanced too much by large freight bills, and his receipts lessened too much through the same method. If, as seems likely, the new Republican congress puts back on the dutiable list the food products made free by the Wilson influence the exporters of Canadian grains, animals and other natural products will have a severe set-back, or must rely more and more on overseas exportation. This means that prices will be put on an international competitive basis in which the products of countries where costs and standards of living are much lower will meet ours in competition. Under circumstances such as these to maintain our agriculture and make it grow railway costs may have to be revised, because the export production of the country will not be able to absorb the excessive charges.

#### Grand Trunk Management

Problems like these belong to the future, but they take their rise in conditions thoroughly exemplified in 1920. Such developments as the taking over of the Grand Trunk Railway will permit of future economies in operating. The government agreement provided for the appointment of a board of management on acceptance of the offer by the shareholders. This board was to consist of two Grand Trunk representatives, two government representatives, and a fifth chosen by the four. This provision was no sooner carried out than changes in schedules of freight and passenger trains, ticket selling and other services were made, to eliminate overlapping. President Hanna admitted that the real benefits of the amalgamation would be derived only after the Grand Trunk was fully incorporated in the National system.

At present the board of arbitrators to fix the value of the guaranteed and preference stocks of the Grand Trunk is working out a valuation for the system, and until that is done and the government makes the exchange of new stock and calls in the old, the formal incorporation is delayed. But early in the year the Grand Trunk Pacific was taken over, the minister of railways being receiver. Early in 1921 the 9,000 miles of the Grand Trunk system should become part of the National system in fact, and Canada then will have completed its gigantic venture in public ownership and operation of railways.

#### National System Has Bad Start

Beginning with such a handicap as is inherent in operating a group of semi-bankrupt railways the National Railways board must necessarily meet many adverse conditions. Chairman Hanna issued an order during the year that no employee of the National Railways should accept political nominations, and several candidates for provincial seats were let out because they violated the rule of no active participation in politics. This endeavor to keep the system, with its thousands of employees, out of politics, is only one of many the management must make to preserve the cohesion of its working force. Appeals by the management for the same efficiency as is required by a private corporation such as the C. P. R. have not been infrequent, but the lines have not been operated long enough for the success or non-success of the experiment to be established.

#### Promise of Development

The splendid thing about our present situation is that we have a railway plant capable of serving 20,000,000 people, with small extensions. We are paying heavily for this now, but we should get dividends from it annually in extra business through the large settlement and expansion this accommodation makes possible. Canada is blessed with a high-class railway service at rates that still are comparatively low, and if future conditions are handled with skill and foresight there seems no reason why the grave defects revealed during 1920 cannot be remedied under happier circumstances in the years to come.

# GROUP INSURANCE AN INVESTMENT

*That Benefits Both Employer and Employees*

**M**ANY employees want life insurance protection but are not insurable and cannot get a policy themselves. Many are not insured because they spend all they earn and think they cannot afford a policy. Many who are husbands and fathers do not fully realize their responsibilities towards their families, and fail to insure.

Our Group Plan puts all employees into the insurable and insured class. It gives each of them a Policy without medical examination and without expense. Every employee is thereby covered by life insurance—as every worker and producer ought to be.

It links the home and the dependents of the employee more closely to his work and his employer. The good will and appreciation of the home and family is a most important factor in developing loyalty and co-operation.

It tends to retain the better class of men and women in office and plant who are of greatest worth to the success of the business and who appreciate most the protection provided for them and their dependents. Their appreciation grows as time goes on, when they see the cash benefits that are derived from the insurance.

Group Insurance thereby becomes an investment that gives an increasing return to the employer by way of a more interested class of employees, better team work, greater efficiency and reducing costs through labor turn-over.

It puts on a business basis the relieving of the distress that follows the death or total and permanent disability of employees, free from discrimination and free from the stigma of charity.

The cost is very low for the many benefits that are guaranteed, the premium usually amounting to less than 1% of the payroll.

Canada Life Group premium rates are on the lowest scale obtainable. The Policy contains every liberal feature of real value to employer and employees. Moreover, Canada's oldest Life Insurance Company is in a position to give the best possible service.

*Let us send you our proposition. It will interest you*

# Life Insurance in Canada in 1920

**New Business Exceeded 1919 Record—Mortality Experience Slightly Better, Indicating that Pre-War Improvement is Being Resumed—High Rates on Bond Investments Attracted Large Part of Companies' Funds—Increase in Policy Loans—Life Insurance Without Medical Examination Being Considered**

T. A. DARK, F.A.S.

Assistant Manager and Actuary, Excelsior Life Insurance Company

UNQUESTIONABLY the outstanding feature of the life insurance business for the year 1919 was the phenomenally large volume of insurance written, the increase over the production of 1918 being approximately 70 per cent. This deluge of business first became clearly evident during the influenza epidemic of 1918, although the epidemic itself was only one of several powerful factors contributing to the general result. That these influences, or others as effective, continued to operate during 1920 is evident from a glance at the following figures. The results for 1920 are, naturally, only approximate:

### Insurance Written and Paid for in Canada

Year	Amount	Year	Amount
1915	\$221,119,558	1918	\$313,251,556
1916	231,101,625	1919	524,543,629
1917	282,120,430	1920	625,000,000

### Uncertainty at Beginning of Year

It will be seen that the business put on the books of the Companies during the last two years was nearly one hundred millions in excess of that acquired during the four previous years. One need not seek far for an explanation, although the result for 1920 is better than many would have predicted at the beginning of the year. At that time there existed a very general feeling that the period of high wages, high prices and apparent general prosperity would not continue much longer, and when the end did come it would bring about a decided slump in the volume of life insurance transacted. Recent events indicate that the crest of high prices and high wages has been passed, but the downward trend, so far as Canada was concerned, commenced too late in the year to have any serious effect on production. Similarly the value of money continued much depreciated, necessitating the buying of larger amounts of insurance in order to maintain the same standard of protection for one's dependents as in former years. Here also the reaction has been too recent to have had any appreciable effect.

Then, too, in January, 1920, just as life insurance officials and the public generally were beginning to breathe easily, hoping that the predicted recurrence of the influenza epidemic of 1918-1919 would fail to materialize, claims from this cause began to be reported to the Head Offices. It is true that the disease passed over the country with an incomparably lighter touch than before, but it reached from Atlantic to Pacific and brought back vividly the need of protection so strongly emphasized during the previous outbreak.

### Previous Records Exceeded

These forces with another to which too high tribute cannot be paid—the increased efficiency of the life insurance salesman—made 1920 a banner year in production.

### Business in Force in Canada (in thousands-)

End of Year	Amount	Gain over prev. year	Gain as % of business written
1914	\$1,242,160	\$73,570	34%

1918	1,785,061	200,019	64%
1919	2,187,837	402,776	77%
1920 probable	2,637,837	450,000	75%

Little comment on these figures is necessary. The approximation for 1920 has been obtained by using as a basis the results of a number of Canadian companies whose experience would probably be fairly representative of all companies doing business in Canada. It is natural that the same influences which have made for larger production should have acted as a decided check on lapses and surrenders. The result has been that unnatural terminations (lapses and surrenders) were in 1919 only four times the natural terminations (death claims and matured endowments), while in 1914 the former were six times the latter.

### Conservation of Business

While 1920 repeated the favorable experience of 1919, the watchword now is "Conservation of Business." How important this problem appears at this time may be judged by the fact that at the meeting of the Association of Life Agency Officers held in Chicago on November 10th and 11th the general subject for discussion was "The Relation of the Agent to the Conservation of Business." The subject was approached from many angles, among them being:—

1. Qualities which general and local agents should possess to be effective in this work.
2. Cost of lapses.
3. Value of institutional advertising in a conservation campaign.
4. The manager's function in the training of agents.
5. The method of compensation most useful in keeping business on the books.

Conservation begins when the prospect is approached. The advice given as to the proper plan of insurance and the proper explanation of the plan does much to determine whether the policy will be persistent and the holder a staunch friend of the company. Lapses and surrenders can be prevented also by a careful selection of new applicants. The risk which is poor from either the physical or financial standpoint should be avoided because each such case submitted to the company costs the present policy-holders money. Further the old policy-holder is entitled to and should receive the same service as the more recent member—a service which should not end until his policy terminates in a natural way.

### Mortality Experience

Each year in the report of the Superintendent of Insurance there is published a table giving as accurate a representation of the mortality per 1,000 among insured lives as can be gathered from the returns of the companies reporting. They include active companies doing ordinary business, active industrial companies, assessment and fraternal societies, and non-active and retired companies. While the results at the best are only approximate, they are interesting as indicating the trend of mortality during the last decade.

### Death Rate per 1,000 Among Insured Lives in Canada

Year	Rate per 1,000	Year	Rate per 1,000
1911	9.7	1916	10.6
1912	9.3	1917	11.1
1913	8.7	1918	14.1
1914	8.6	1919	8.3
1915	8.8	1920	8.2 (est.)

It is clear that the gradual but quite appreciable improvement in mortality extending from 1911 to 1914, interrupted in 1915, was resumed in 1919. The figures for the years 1915 to 1917 inclusive show the excess mortality due to war losses,

increased during the last quarter of 1918 by the abnormal influenza claims. It may be interesting to add just here that the first influenza epidemic was responsible, in the six months from October, 1918, to March, 1919, inclusive, for claims on the lives of Canadian policy-holders amounting to over twelve and a half million dollars. Most of these claims were incurred in 1918.

A brief reference has already been made to what may be called a minor outbreak of influenza in the early months of 1920. No figures are as yet available to measure, even approximately, the losses incurred in 1920 from this cause, but though considerable, they were not sufficient to adversely affect the mortality of the year as compared with 1919.

The following table shows, for several Canadian companies, the mortality experienced in 1919, calculated as a percentage of the expected, and the probable figures for the same companies for 1920:—

Company	Actual mortality as percentage of expected	
	1919	1920
A -----	55%	60%
B -----	60%	55%
C -----	60%	55%
D -----	55%	45%
E -----	50%	50%
F -----	60%	55%
G -----	55%	55%

### The Investment Situation

#### Principal Investments of Canadian Companies

(Amounts are given in thousands)

Year.	Loans on real estate.		Loans on policies.		Bonds and debentures.	
	Amount.	% of total assets.	Amount.	% of total assets.	Amount.	% of total assets.
1913 .....	\$116,571	34	\$41,990	12	\$133,087	39
1914 .....	122,358	33	48,773	13	143,456	39
1917 .....	119,275	26	56,318	12	209,132	46
1918 .....	115,515	24	57,588	12	246,518	51
1919 .....	114,387	22	53,376	11	285,786	54

The above table shows that, while at the end of 1914 mortgages on real estate formed 33 per cent. of the assets of Canadian life insurance companies, and bonds and debentures 39 per cent., the corresponding figures at the end of 1919 were 22 per cent. and 54 per cent. In these six years the amount invested in mortgage loans actually decreased, although in the same time the total assets of the companies increased 55 per cent., or \$188,000,000. Of this increase in assets \$153,000,000, or 81 per cent., have been invested in the bonds and debentures.

#### Bonds and Debentures

All Canadian life insurance companies subscribed very liberally to the various war loans and this fact is largely responsible for this very decided change in the character of their investments. In addition, the slackening in building activity, with the consequent lessened demand for loans, has had its effect as have also the good crops and high prices which have been obtained for them throughout the Dominion. Nor must it be forgotten that the yield on securities of the highest class has been gradually rising until during the last quarter of 1920 rates undreamed of only a few years ago have been realized. One result of the diminishing difference between the rates realizable on mortgage loans and on bonds has been to divert a considerable amount of funds to bond investments which would otherwise have gone into mortgages. About 310 million dollars represented the investments in bonds and debentures at the end of 1920.

#### Mortgage Loans

It is quite certain, however, that the present fairly general depression in trade will set free a large supply of money and have a direct tendency to bring about a more active demand for high-grade bonds. This in turn will automatically raise the price of bonds (unless the supply keeps pace with the demand) and reduce the yield, thereby swinging the investment pendulum once more toward mortgage loans. Not until the autumn of 1920 did there seem to be any very marked upturn in the demand on the part of borrowers for mortgage loans. During the last few months of the year applications

for loans seem to have come in quite freely and, judging by reports received, the amount invested in this class of security at the end of 1920 approached \$120,000,000.

#### Policy Loans

The loan privilege of a life insurance policy is exceedingly valuable when properly used, but quite mischievous when abused. Among the advantages of loans on insurance policies over those obtained from other sources are—

1. No collateral, other than the policy, is needed.
2. Money can be obtained quickly and without publicity.
3. No time for repayment is stipulated.
4. The rate of interest charged is often lower than the current rate, especially on old policies where the rate is stated in the contract.

Life companies in general have been experiencing an increased demand for policy loans during the last few months, the causes of which are fairly evident. In the first place, to assist in the process of deflation banks have been reducing their lines of credit and have made it more difficult for clients to borrow from them by raising the rate of interest charged. As a result many persons have been obliged to borrow on their policies for legitimate business purposes. Others, wishing to take advantage of the very attractive prices at which the very best Dominion, provincial and municipal securities have been obtainable of late, have borrowed on insurance policies, intending to repay the loans out of future savings, or, perhaps, in the hope of making a profit from an early sale. In the prairie provinces the increased demand for policy loans is probably largely due to the desire of many farmers to hold their wheat for higher prices or to their inability to obtain cars for shipments. Some of these factors also entered into the recent increase in applications for mortgage loans already mentioned.

Some policy-holders, however, have been guilty of mortgaging the protection for their families—or, as it has been aptly put, of borrowing from their widows and orphans—for luxuries such as motor cars, and in amounts in excess of actual needs. To make matters worse, the majority of borrowers do not repay these loans and the policies ultimately lapse. Agents do a real service to policy-holders by discouraging loans and by keeping them down to the minimum wherever possible. Moreover, they should urge that they be repaid in full at the earliest possible moment.

It is estimated that loans on policies increased during 1920 to at least \$60,000,000.

#### Dividends

It was inevitable that life insurance companies during the past few years should have had to bear their share of the prevailing high cost of conducting business. Skilful administration did much to lighten this burden, but in addition the companies had to face a very large extra mortality due to war and epidemic. As a result many companies found it advisable to make some reductions in their dividends for 1920 (and in some cases for earlier years), though in no case was the reduction serious. No definite information is yet available concerning the action of the companies in connection with dividends for 1921, but it is unlikely that there will be much change.

Prospects are bright, however, for a comparatively early improvement in dividends or refunds of premium payments, as they might more properly be called. Mortality, as we have seen, has dropped to its pre-war level, the rate of interest now being realized is very satisfactory while the expense rate is not excessive. Even though the large volume of business written in 1919 and 1920 continues, as is hoped, the strain thereby placed on the surplus of companies will be temporary and will ultimately be more than made good.

#### Life Insurance Without Medical Examination

It will doubtless come as a surprise to many to learn that some companies are very carefully and seriously considering the possibility of entertaining applications for life insurance for amounts not in excess of \$1,000 without medical examination. This idea is not, as might be supposed, the direct result of the practice of granting group life insurance without medi-

cal examination. Nor is it altogether new. Although so far as the companies writing ordinary life insurance in Canada are concerned it would be an experiment, industrial companies for some years have been writing small risks (maximum about \$250) in this way and have experienced a favorable mortality in this class. In Great Britain three or four companies doing ordinary business have been issuing policies up to £250 without medical examination with good results. One at least of these companies has been issuing policies up to £1,000, with the proviso that if death occurred in the first three months only one-third of the sum assured would be paid, if death occurred in the next three months two-thirds would be paid, and thereafter the full amount of the policy. This scheme also has shown satisfactory results.

This idea, while it will require careful working out, has many features to recommend it. For example, large stretches of our Dominion are very sparsely settled, and other parts, better settled, are poorly supplied with medical men. Under such circumstances it is often exceedingly difficult to have a medical examination made. Even where medical examiners are readily available the agent often finds it hard to arrange a time for examination convenient alike to the applicant and the examiner. This takes up a great deal of the agent's time and it is a question whether this time could not be used by the agent with more profit to himself and the company in seeking new business. Then, too, agents occasionally meet persons who do not want to take the time or trouble to go to a medical man for an examination, even though the company is paying the fee. It is not that they have any fear of not being able to pass the medical test. They are just temperamentally indifferent.

Under this plan the applicant would be required to complete an application in the usual way. He would have to give a complete family and personal history and answer a series of questions designed to bring out all facts within his knowledge which would have a bearing on the company's decision as to acceptance or rejection of the risk. Should the information brought out in this way be unfavorable in any particular a medical examination might be required. It is probable that certain plans of insurance, such as term insurance, would not be granted under this scheme, also that certain classes of applicants would have to undergo examination in all cases.

Canadian life insurance companies have always had the well-deserved reputation of being aggressive and desirous of living up to the full measure of their opportunities. Whether this scheme offers a safe means of extending the benefits of life insurance more widely remains to be seen, but it is fairly certain that it will be given an early trial.

#### The Agency Field

A brief reference has already been made to the efficient work of life insurance salesmen. It is being more than ever recognized by company executives that in the past too much time and money have been wasted on unproductive agents. It seems only fair to the real producers, who are giving service alike to their clients and their companies, that they should be protected against the interference of the part-time man, the spotter and others with no regular company affiliation. During the past year it has been shown conclusively by one large American company that a carefully educated and trained agency organization of proven worth can do more effective work in the field than a larger organization of unqualified and untrained men. And the results are more beneficial all around — to the company, to the agency force and to the policy-holders alike. The company in question, by a gradual house-cleaning, reduced its agency establishment to *one-third* the original number and from this smaller force received double the former volume of business.

There is, indeed, much food for thought here. In no line of effort can incompetents and misfits do so much harm as in the business of life insurance. The time is approaching when many companies will not engage agents who have not followed a prescribed course of study and training. In fact, several Canadian companies already have regular agency instructors

to whom is entrusted the training of the prospective agent. Other companies have encouraged their representatives to attend the School of Life Insurance Salesmanship at the Carnegie Institute of Technology, Pittsburg. Here not only are they taught the theory and principles of life insurance but they are also carefully instructed in the theory of psychology and given practical experience in its application to salesmanship, particularly the sale of life insurance. As these better-equipped men go about their daily work they cannot fail to bring about a more enlightened and favorable public opinion and to raise the business of selling life insurance to a much higher plane. Not only is life insurance being more intelligently sold but it has become an important factor in the question of credit. Bankers are advocating it to their clients constantly and lend much more readily when they find that the prospective borrower is carrying a proper amount of life insurance. This attitude is due not only to the increased security afforded by the insurance, but also to the fact that a man who is provident enough to protect his dependents is more likely to make a satisfactory borrower.

#### Huge Savings Are Represented

A writer in "The New England Pilot," published by an American life insurance company, says:—

"Speaking of thrift as expressed in premiums, the New York *Sun* said last May of the new business of 1919: 'Every dollar of this insurance represents saving, investment, foresight, provision for the future. If there have been fools for spending in these flush times, there have been wise men for saving, and the benefits of their prudence will endure.' As someone has pointed out, buying life insurance during the recent past may have been a craze, but it certainly was not an extravagance nor a dissipation. If this was true of last year, it is true in much greater degree of 1920.

"The fact is that our people are not buying enough, instead of too much; or, rather, they have just begun to buy enough. One of the most important contributing causes of the wonderful growth in the popularity of life insurance has been this—its increased adaptability to human needs. This is seen markedly in monthly income insurance, business insurance, and insurance to cover inheritance taxes. To a large extent the explanation and the justification of the activity is found in this great extension of service. The general liberalization of policy contracts and the diversity in their forms of applied usefulness explain much of the increased demand for the all-embracing protection of modern life insurance."

These are permanent factors and warrant the hope that, although the spectacular strides of 1919 and 1920 may not soon be repeated, life insurance is entering on an era of strong, steady growth and prosperity. This development is expected, although experience has shown that life insurance production follows more or less closely the rise and fall of commodity prices, and with declining prices one would logically expect a lessened production. To offset this natural tendency is at once the task and the opportunity of life insurance salesmen.

#### FEWER SHIPS IN MONTREAL HARBOR

Statistics compiled by the harbor commission for the navigation of the past season show that the total number of trans-Atlantic ships entering the port was 638, a drop of 64 as compared with the previous season. The tonnage, however, totalled 2,020,519, against 2,041,638 in 1919, showing that the average tonnage per ship was higher. The actual importance of the port's tonnage was greater than in 1919, since the total number of ships arriving there last year included 229 ships built for the United States Shipping Board, against 120 of the same ships arriving this year.

The main part of the tonnage this year was British, comprising a total of 460 ships, with a tonnage of 1,581,499. Next came the United States with 120 ships and a total of 225,855 tons. Inland navigation showed considerable slackness, the number of ships being 4,403, with tonnage of 4,287,714, against 7,444 ships with 4,357,734 tonnage in 1919.

# Fire Loss Second Largest on Record

1920 Total is \$27,371,574, Compared With \$23,207,647 for 1919, and  
\$31,815,844 in 1918—April and December Were Heaviest Months—  
301 Fires With Loss of \$10,000 and Over—Fatalities Numbered 224

CANADA'S fire loss in 1920, as estimated by *The Monetary Times*, was \$27,371,574, which is \$4,000,000 higher than in 1919, and is exceeded only by 1918, when the exceptionally high figure of \$31,815,844 was reached. There were 301 fires, causing a loss of \$10,000 and over, compared with 288 in 1919.

A slight change was made in compiling the figures for 1920, a more liberal estimate for unreported fires being made. This accounts, in part, for the increase in the estimated total loss, but there is no doubt that the actual monetary damage was greater than in 1919.

The results may be summarized as follows:—

	1917.	1918.	1919.	1920.
Average monthly loss	\$1,673,840	\$2,651,320	\$1,933,970	\$2,280,964
Loss per capita	\$2.60	\$4.11	\$2.90	\$3.42
Fires with damage of \$10,000 or over	238	256	288	301

*The Monetary Times'* record for the past four years shows the following monthly losses:—

Month.	1917.	1918.	1919.	1920.
January	\$ 1,918,660	\$ 2,688,556	\$ 3,915,290	\$ 2,637,850
February	2,009,953	2,243,762	1,091,834	1,895,575
March	2,050,650	1,682,286	2,154,095	1,793,200
April	1,317,714	3,240,187	1,080,070	3,229,500
May	1,163,110	3,570,014	1,785,130	2,001,819
June	1,184,627	3,080,982	3,337,530	1,424,319
July	1,101,734	3,369,684	1,118,377	1,426,850
August	1,230,183	3,110,445	1,374,495	1,857,800
September	1,301,700	917,286	1,940,272	2,480,485
October	704,605	5,119,145	1,023,288	2,467,901
November	959,049	1,059,580	2,339,870	2,769,800
December	5,144,100	1,733,917	2,047,496	3,386,475

Totals .. \$20,086,085 \$31,815,844 \$23,207,647 \$27,371,574

The following table gives a list of fires of \$10,000 and over, month by month, compared with five previous years:—

Month.	1915.	1916.	1917.	1918.	1919.	1920.
January	35	28	28	43	25	31
February	25	30	31	21	18	33
March	24	30	26	16	28	23
April	22	13	13	24	26	32
May	23	23	11	27	20	19
June	18	9	17	19	31	8
July	11	13	16	24	22	16
August	10	14	14	23	16	21
September	20	12	10	14	17	30
October	17	14	15	12	19	27
November	13	14	26	14	25	29
December	19	18	31	19	41	32

Totals .. 237 218 238 256 288 301

Fires causing damage of \$100,000 and over were as follows:—

Jan. 8, \$500,000, East End Garage, Montreal.  
Jan. 9, \$120,000, Creighton's garage, Toronto.  
Jan. 11, \$175,000, Richmond Paper Co., warehouse, Halifax.  
Jan. 18, \$300,000, Empire Hotel, Grand Hotel and three stores, Calgary.  
Jan. 21, \$140,000, J. Bambrick and Ottawa Printing Co., Ottawa.  
Jan. 30, \$125,000, Westminster Presbyterian Church, Toronto.  
Feb. 8, \$100,000, building in Halifax.

Feb. 13, \$100,000, Hayden-Gibson theatre block, Woodstock, N.B.  
Feb. 27, \$100,000, Bank of Nova Scotia block, Sydney, N.S.  
Mar. 4, \$100,000, McKinnon Building, Toronto.  
Mar. 6, \$125,000, G.T.R. freight sheds, London.  
Mar. 8, \$100,000, warehouse Dominion Steel Corp., Sydney, N.S.  
Mar. 9, \$100,000, Port Arthur Electric St. Ry., Port Arthur.  
Mar. 14, \$150,000, St. Joseph's Catholic Church, Buckingham, Que.  
Mar. 16, \$100,000, five buildings, Annapolis Royal, N.S.  
Apr. 1, \$150,000, Jewish synagogue, Montreal.  
Apr. 7, \$400,000, car barns of Winnipeg St. Ry., Winnipeg.  
Apr. 11, \$150,000, several stores, Notre Dame du Lois, Que.  
Apr. 11, \$150,000, cannery plant, Inverness, B.C.  
Apr. 22, \$440,000, London Collegiate Institute, London.  
Apr. 27, \$200,000, factory of St. Henri Shoe Co., Montreal.  
Apr. 27, \$100,000, Dearborn and Co., Ltd., St. John, N.B.  
Apr. 28, \$100,000, Pioneer elevator, Killam, Alta.  
Apr. 29, \$200,000, Essex County Sanitorium, Windsor, Ont.  
May 15, \$100,000, garage and 38 cars, Digby, N.S.  
May 19, \$100,000, Eureka Pure Bred Stock and residence, Duncan, B.C.  
May 19, \$150,000, Wallace Cannery freighter, Prince Rupert, B.C.  
May 20, \$100,000, bakery, Milford, N.B.  
May 21, \$105,000, building, Toronto.  
May 27, \$200,000, Cote Mills, St. Joachim, Que.  
May 30, \$100,000, lumber yards, Ottawa.  
June 13, \$150,000, Moyneur, Ltd., Ottawa.  
June 13, \$200,000, Bishop Lumber Co., Sault Ste. Marie, Ont.  
June 16, \$200,000, John Watson Co., Ayr, Ont.  
June 20, \$100,000, Balmoral Apts., Vancouver.  
July 5, \$100,000, Western Printing & Litho Co., Calgary.  
July 10, \$100,000, Mann axe factory, St. Stephen, N.B.  
July 20, \$100,000, R. D. Patterson's chemical fertilizer plant, St. John, N.B.  
July 25, \$100,000, Currie-Williams Cannery, Ladner, B.C.  
July 29, \$100,000, two-story building, St. Thomas, Ont.  
Aug. 4, \$100,000, business block, Carp, Ont.  
Aug. 7, \$100,000, business section, Morinville, Alta.  
Aug. 19, \$200,000, factory, St. Tite, Que.  
Aug. 24, \$400,000, Brunswick Hotel, Moncton, N.B.  
Sept. 5, \$150,000, rink and dairy, Ottawa.  
Sept. 9, \$200,000, plant, Montreal.  
Sept. 9, \$115,000, sawmill, Powell River, B.C.  
Sept. 18, \$100,000, military huts, Barriefield, Ont.  
Sept. 21, \$200,000, business section, Brockville.  
Sept. 24, \$500,000, lumber mill, Charlo Station, N.B.  
Oct. 11, \$150,000, lumber mill, Stewiacke, N.S.  
Oct. 14, \$500,000, plant, Tillsonburg, Ont.  
Oct. 15, \$200,000, business section, Ste. Stanislas de Kostka, Que.  
Oct. 17, \$100,000, mill, Port Arthur, Ont.  
Oct. 19, \$300,000, business section, Wadena, Sask.  
Oct. 29, \$200,000, police buildings, Brandon, Man.  
Nov. 10, \$400,000, warehouse, Winnipeg.  
Nov. 12, \$100,000, department store, Sydney, N.S.  
Nov. 13, \$175,000, steamer, Vancouver.  
Nov. 15, \$150,000, parish hall, Ottawa.  
Nov. 21, \$500,000, retail business section, Quebec.  
Nov. 22, \$100,000, building, Montreal.  
Nov. 30, \$100,000, hospital, Gravenhurst, Ont.  
Dec. 1, \$125,000, building, Wilfville, N.S.  
Dec. 1, \$250,000, business section, Jasper, Alta.  
Dec. 7, \$100,000, bakery, St. John's, Nfld.

Dec. 15, \$500,000, college, Quebec.  
 Dec. 22, \$100,000, factory, Oxford, N.S.  
 Dec. 23, \$300,000, plant, Berthierville, Que.  
 Dec. 24, \$500,000, banking district, Halifax, N.S.  
 Dec. 24, \$200,000, building, Toronto.  
 Dec. 27, \$105,000, building, Montreal.

Deaths due to fires in 1920 were as follows:—

Month.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.
January	14	26	3	10	21	28	13	22
February	21	18	11	23	19	87	26	30

# Hail Insurance Results Were Satisfactory

Premiums Greatly Exceeded Those of Previous Years—Loss Ratios Lower Than Usual—Reduction in Rates is Possible—Municipal Insurance in Alberta Has Been Fortunate, But in Saskatchewan Extra Assessment Was Necessary in 1919

By W. A. SMART, Calgary, Alberta

Manager, Hail Department, British Crown Assurance Corporation, Ltd.

PREMIUMS paid to companies by farmers in western Canada for hail insurance in 1920 far exceed the total of any previous season. Following is a synopsis of premium received and losses sustained for the season. Similar figures for a period of years in Saskatchewan and Alberta are also given:—

1920	Premium	Losses	Ratio %
Saskatchewan	\$4,346,605	\$1,860,644	43
Alberta	2,171,954	745,567	30
Manitoba	391,781	113,000	28.80
Totals	\$6,910,340	\$2,719,211	39.3

Besides the above premium municipal taxes amounting to a large sum were levied for hail insurance in Saskatchewan and Alberta.

## SASKATCHEWAN

Year	Premium	Losses	Ratio %
1909	\$281,035	\$180,213	64
1910	547,995	287,537	43
1911	787,253	532,840	67
1912	1,051,125	757,640	72
1913	783,194	485,305	61
1914	747,838	173,443	23
1915	1,363,001	438,619	32
1916	1,417,853	1,872,408	132
1917	2,409,746	687,085	28
1918	2,116,330	772,767	36
1919	2,277,819	1,784,896	78
1920	4,346,605	1,860,644	43
Totals	\$18,129,794	\$9,783,397	53.9

## ALBERTA

Year	Premium	Losses	Ratio %
1913	\$302,929	\$214,079	70
1914	381,496	211,724	55
1915	1,119,816	855,643	76
1916	1,237,349	1,029,981	83
1917	1,788,705	1,183,537	66
1918	991,085	189,225	19
1919	861,704	354,358	41
1920	2,171,954	745,567	30
Totals	\$8,855,038	\$4,784,114	54

### Rate Reduction Being Considered

For the last three years losses in Alberta have been unaccountably far below normal, or what insurers had grown to regard as normal. The companies operating show a disposi-

tion to be content with a moderate profit, and in view of the more recent experience in this province they are now considering a reduction of premium rates. Some of the older operators who have vivid memories of former experiences view with some trepidation the proposal to reduce rates. They argue that the subnormal conditions of the past three years can hardly be expected to continue and that a disastrous season is already overdue. Nevertheless a large reduction of rates is probable.

### Municipal Insurance in Alberta

The municipal scheme of hail insurance in this province has been fortunate in having three successive seasons of small losses, and its popularity has increased from year to year because of the favor of the elements. Keen observers of the history of hail insurance, and particularly of the municipal schemes in the various provinces, are inclined to think that one season's experience such as that of 1916, or even a less disastrous season, is all that is required to shatter the confidence of the farmer, temporarily at least, in the municipal scheme. For example, if hail had cause as much destruction this year as it did in the season referred to the municipal commission would have required to assess a premium of probably 18 per cent. instead of 6 per cent. In the event of such an assessment being made the present supporters of the scheme might be expected promptly to exercise their right to withdraw their land from taxation under the municipal hail act for the next ensuing year.

Something like this happened in Saskatchewan in 1919 when the municipal commission exercised a new provision of the act for the first time by levying an extra assessment to meet the indemnities which had been awarded. It is estimated that nearly 50 per cent. of the lands then liable to taxation for hail insurance were so withdrawn. The weakness of any co-operative insurance scheme of this kind seems to lie in the fickleness of its supporters. They are loyal only so long as the sailing is smooth and times are prosperous, but when the winds of adversity blow many are unable to bear the strain and are apt to forget the benefits enjoyed in the past.

### Company Insurance in Saskatchewan

Company rates are not likely to be reduced in Saskatchewan for next season, except perhaps in a few small areas where extra charges were previously imposed. It is not considered that the general experience in this province warrants a reduction.

In Manitoba there will probably be a substantial reduction based on the more recent experience there. Mani-

toba is to try out a plan of municipal insurance, too, I hear. Preliminary steps for inauguration of it have already been taken.

During the season lately closed farmers insured more heavily than ever before, as the figures quoted show. Twenty and twenty-five dollars per acre were quite common insurances, a considerable number going as high as \$40.00. The anticipated high prices of grain were responsible for the high insurance no doubt, and the recent sharp decline of the same

has been a severe disappointment to many farmers. Companies which operated on the premium note plan share sharply in that disappointment. Whereas farmers may have placed insurance last season in excess of the amount warranted, it is probable that the experience after the close of the season with regard to prices of grain will have a tendency to swing sentiment in the opposite direction, and it will not be surprising if next season the amount of hail insurance written is less than conditions and circumstances really warrant.

## Soldiers' Insurance Act Produces Business

**\$3,282,000 Applied For Up to December 1—This was Only Piece of Insurance Legislation at 1920 Session of Parliament—An Outline of the Terms of the Act—Many Non-Pensioners Apply—All Branches of Service Are Eligible**

**A** RETURNED Soldiers' Insurance Act was the only act passed dealing with insurance at the 1920 session of the Canadian Parliament. It was the result of frequent complaints that disabled veterans were unable to secure protection in the ordinary way. The act is administered by the Board of Pension Commissioners for Canada.

Up to December 1 there were 1,015 applications for insurance under the act. The total value of the insurance represented in these applications is \$3,282,000, and the premiums received up to November 27 totalled \$26,711. In compliance with the act, all the applications have been received since September 1. During September only 160 applications were received, all the others coming in October and November.

### Majority Are Physically Fit

Among the applicants are included every rank from private to major-general, although privates form the majority of the policy-holders to date. With so many tuberculous soldiers in sanitariums and others throughout Canada suffering from one disability or another, it is a remarkable fact that so far the majority of applicants have been men suffering from no disability whatever. It is estimated that 60 per cent. of those taking policies to date are first-class risks. This statement is made on the ground that three-fifths of those taking insurance have not suffered any illness since their discharge. Of the 1,175 in sanitariums suffering from tuberculosis very few have taken advantage of this insurance.

Of the 875 policies issued up to November 15th, 393 were to pensioners for \$1,158,000 and 482 to non-pensioners for \$1,722,000. The liability to pensioners is somewhat restricted although they are fully protected. If a pensioner were to die of any other cause than his disability resulting from the war his heirs would not get his pension, and in that case the full amount of the insurance would go to them. If, however, a pensioner does die of his disability, and the pension going to his heirs is greater in capital value than the insurance, the heirs will receive under the act the total value of the premiums paid with compound interest at 4 per cent. If there is a pension the total capital value of which is less than that of the insurance in force, the amount in excess will be paid.

### Average Policy Is High

Policies are issued for a minimum of \$500 and for multiples thereof, not exceeding \$5,000. That a large number are taking full advantage of the insurance offered is evident when it is stated that an average unit of the policies held would be \$3,690. Practically all the officers and many privates take full advantage of the opportunities offered by the act. The scale of premiums is below that offered by the insurance companies and slightly higher than that offered to civil servants. The most popular forms of policies are the "all life" and the "twenty-year pay life" policies.

Premiums are payable monthly, quarterly, half-yearly or yearly. As no advantage is given for the longer period pay-

ments, the great majority of the policy-holders have chosen the monthly payment plan. No woman has yet taken advantage of the plan, although the widow of a soldier who died after his discharge or a widowed mother are entitled to avail themselves of it. So far few soldiers who only served in Canada have taken insurance under the act, the name of the act, "The Returned Soldiers' Insurance Act," having probably made them think mistakenly that they could not qualify. No applications have been received from any Frenchman, Italian or American who was resident in Canada before the war and who served in one of the allied armies, although such veterans, too, are eligible. Nurses are eligible, and W.A.A.C.'s, but V.A.D.'s, not having been subject to military discipline, would not be eligible. Insurance men have co-operated in the work, advising many men who could not qualify for their companies of the federal plan.

### Business by Provinces

Ontario has furnished the largest proportion of the policy-holders. Up to two weeks ago the policy-holders were distributed among the provinces as follows: Prince Edward Island, 0; Nova Scotia, 20 risks for \$61,000 insurance; New Brunswick, 16 risks for \$63,000; Quebec, 103 risks for \$361,500; Ontario, 429 risks for \$1,375,500; Manitoba, 84 risks for \$254,000; Alberta, 60 risks for \$196,000; Saskatchewan, 68 risks for \$242,500; British Columbia, 94 risks for \$321,500; and the Yukon, one risk for \$5,000. No claims have been paid as yet.

Before the opening of parliament this year the government will consider the adding of unemployment insurance to the business it has already established in returned soldiers' insurance, and in civil service insurance. As considerable unemployment is expected through the winter, the minister of labor may urge that unemployment insurance, operated as complementary to the federal system of labor bureaus, would be practical policies.

### In Force for Two Years

A statement issued by the board outlines some of the features of the act as follows:

"All returned soldiers and their families will be interested in the Returned Soldiers' Insurance Act, under which they are provided with an opportunity of obtaining life insurance at most favorable rates. The act became effective on September 1st, 1920, and will remain in force for two years.

"Under the provisions of the act any honorably discharged soldier, sailor, or nurse, of the Canadian forces, domiciled and resident in Canada, may insure with the government to an amount of from \$500 to \$5,000. Under certain conditions the widow of a returned soldier who died subsequent to discharge may also obtain insurance.

"In addition to former members of the C.E.F., the privileges of the act are available to anyone, male or female, who served during the late war in the Imperial Army or with the forces of any of the allied or associated powers, providing they

were domiciled and resident in Canada before the war and hold an honorable discharge.

"Many of those who served overseas, while not suffering from a severe disability, find that their physical condition is such that they are unable to obtain life insurance at all or only at much higher rates than are normally demanded. They, therefore, find themselves severely handicapped in providing protection for their dependents. Under the Returned Soldiers' Insurance Act all returned men are placed on an equal basis as no medical examination is required.

**Premium Rates**

"The premium rates are low. They vary with the age of the insured and the plan of insurance chosen. At the age of 25 a straight life policy for \$1,000 costs \$1.24 per month. At the age of 35 the rate is \$1.70 per month. Beneficiaries are limited in the case of a married man to his wife and children. An unmarried man or a widower without children is required to name his future wife and children as beneficiaries. Should the insured die unmarried the insurance money may be paid to one or more of his immediate relatives according to his will.

"An exceptional advantage of this insurance is the provision made for a disability benefit. Under this section, should the policy-holder become totally and permanently disabled, he is relieved from paying further premiums and the insurance money is paid to him direct in annual instalments equal to one-twentieth of the total amount of the policy.

"Booklets explaining the act and application forms may be obtained from all branches of the Great War Veterans' Association, the Soldiers' Aid Commission, Imperial Veterans of Canada, Grand Army of United Veterans, Army and Navy Veterans, Department of Soldiers' Civil Re-establishment, military district headquarters and district offices of the Board of Pension Commissioners, or direct from the Commissioners, Returned Soldiers' Insurance, Transportation Building, Ottawa."

**Text of the Act**

Some of the provisions of the act are as follows:—

"3. (1) The minister may enter into an insurance contract with any returned soldier domiciled and resident in Canada or with any widow so domiciled and resident, providing for the payment of five hundred dollars or any multiple thereof, not, however, exceeding five thousand dollars in the event of the death of the insured.

"(2) The said payment shall, as to an amount not exceeding one-fifth thereof, be made on the death of the insured and the remainder, or the portion thereof to which any beneficiary is entitled, shall at the option of the insured be payable as a life annuity or as an annuity certain for five, ten, fifteen or twenty years, or as an annuity guaranteed for five, ten, fifteen or twenty years, and payable thereafter as long as the beneficiary may live.

"(3) Any option as to the mode of payment, chosen by the insured in his application for insurance, may be subsequently varied by declaration of the insured endorsed upon or attached to the policy.

"(4) The said option as to mode of payment chosen by the insured may after the death of the insured be varied by the beneficiary, with the consent of the minister.

"(5) The contract may also provide that if the insured becomes totally and permanently disabled and rendered incapable of pursuing continuously any substantial gainful occupation, and if such disability is not deemed to be attributable to his service so as to bring him under the provisions of The Pension Act, the premiums thereafter falling due under the contract shall be waived and the insured shall be entitled to receive as a disability benefit an annual payment not exceeding one-twentieth of the sum insured, the said benefit to continue during the lifetime of the insured but not to exceed twenty such payments in all; and that if the insured dies before the twentieth such payment has been made the balance of the sum assured shall be payable as a death benefit, in accordance with the provisions of this section.

(Continued on page 172)

**DIVIDENDS AND NOTICES**

**THE MERCHANTS BANK OF CANADA**

**QUARTERLY DIVIDEND**

A Dividend of Three Per Cent. for the Current Quarter, being at the rate of Twelve Per Cent. per annum, upon the Paid Up Capital Stock of the Bank, was declared payable on 1st February next to Shareholders of record on the evening of 15th January, stock not fully paid up on 1st November to participate from that date on the amounts then paid up and on subsequent payments from the dates thereof.

By Order of the Board.

D. C. MACAROW,

General Manager.

Montreal, 28th December, 1920.

346

**DOMINION TEXTILE COMPANY, LIMITED**

**NOTICE OF DIVIDEND**

A dividend of one and three-quarter per cent. (1¾%) on the Preferred Stock of the Dominion Textile Company, Limited, has been declared for the quarter ending 31st December, 1920, payable January 15th, 1921, to shareholders of record December 31st, 1920.

By Order of the Board.

JAS. H. WEBB,

Secretary-Treasurer.

Montreal, 6th December, 1920.

342

**NOVA SCOTIA STEEL AND COAL COMPANY, LTD.**

**DIVIDEND NOTICE**

A dividend of two per cent. (2%) on the Preferred Stock and one and one-quarter per cent. (1¼%) on the Ordinary Stock of the Company has been declared, payable on the 15th January, 1921, to shareholders of record at the close of business on December 31st, 1920.

By Order of the Board.

THOMAS GREEN,

Cashier.

New Glasgow, Nova Scotia, December 20, 1920.

345

**THE BANK OF TORONTO**

**ANNUAL MEETING**

The Annual General Meeting of Shareholders of this Bank will be held at the Banking House of the Institution, corner of King and Bay Streets, Toronto, on Wednesday, the twelfth day of January next, the chair to be taken at noon.

THOS. F. HOW,

General Manager.

The Bank of Toronto,

Toronto, November 20th, 1920.

323

**MARCUS LOEW'S THEATRES, LIMITED**

The Directors have declared a Dividend of one and three-quarter per cent. on the preference stock for the quarter ending the 31st December, 1920, payable on the 15th day of January, 1921, to shareholders of record on the 31st day of December, 1920.

By Order of the Board.

SAMUEL D. FOWLER,

Secretary.

Toronto, 31st December, 1920.

## SOLDIERS' INSURANCE ACT PRODUCES BUSINESS

(Continued from page 171)

"4. The said payments shall be made to the wife, husband, child, grandchild, parent, brother or sister of the insured or such other person as may by regulation as hereinafter provided be declared to be entitled to become a beneficiary under the contract.

"5. If the insured is a married man, or a widower with a child or children, the contract shall be for the benefit of his wife, or of his children, or of some one or more of his children, or of his wife and some one or more of his children; and when the contract is effected for the benefit of more than one, the insured may apportion the insurance money among them as he deems fit.

"6. If the insured is an unmarried man or a widower without children, the insurance contract shall be for the benefit of his future wife, or of his future wife and children, and the insured may apportion the insurance money among them, as he deems fit; but if at his death he is still unmarried or is a widower without children the insurance money shall, subject to sections four and eleven of this act, fall into and become part of the estate of the insured.

"7. (1) If the insured is a female and the contract is effected for the benefit of more than one beneficiary the insured may apportion the insurance money among them as she deems fit.

"(2) If the insured is a widow the contract shall be for the benefit of such person or persons within the classes mentioned in section four hereof as may be shown to the satisfaction of the minister to be to a substantial extent dependent upon the widow for support.

"8. Any apportionment under the next three preceding sections may be made in the insurance contract, or by a declaration endorsed thereon or annexed thereto and signed by the insured.

### If Beneficiary Dies

"9. (1) Where an apportionment has been made as provided in sections five and six of this act, and one or more of the persons in whose favor the apportionment has been made die in the life-time of the insured, the insured may, by an instrument in writing endorsed on or attached to the insurance contract, declare that the shares formerly apportioned to the persons so dying shall be for the benefit of the wife and children of the insured, or for one or more of them as he sees fit.

"(2) In default of such declaration the shares of the persons so dying shall be for the benefit of the survivor or survivors of the persons in whose favor the apportionment was so made, in equal shares if more than one.

"(3) If all the persons so entitled die in the life-time of the insured, the insured may by an instrument in writing endorsed on or attached to the insurance contract declare that the insurance money shall be for the benefit of his wife, if living, or of his surviving children, if any, or some one or more of them, or of his wife and children, or of his wife and some one or more of his children, in such proportions as he sees fit, and in default of such declaration, the insurance shall be for the benefit of his wife, if living, and of his children, if any, in equal shares.

"(4) If the insured survives his wife and all his children the insurance money shall, subject to section four of this act, fall into and become part of the estate of the insured.

"(5) A duplicate of every declaration made in pursuance of this and the next preceding section shall be filed with the minister at the time such declaration is made.

### Relation to Pensions

"10. If on the death of the insured a pension becomes payable under The Pension Act to any person or persons within the classes mentioned in section four of this act, there shall be deducted from the benefit payable under this act the aggregate present value of the pension or pensions so payable computed on such bases as may be prescribed by regulation made under the provisions of section seventeen of this act,

and in such case there shall be returned to the beneficiary or beneficiaries in proportion to their respective interests under the contract the proportion of the premiums paid (with interest at four per cent. per annum, compounded annually), which the amount of the said deduction is of the total amount assured under the contract.

"11. (1) If the insured survives all the persons to whom the death benefit may be paid under the provisions of section four of this act, or if all the said persons die before the payment of the instalments of the death benefit have been completed, the estate of the insured shall be entitled to receive only the amount by which the reserve under the contract at the time of the death of the insured exceeds the sum of the payments so made.

"(2) In this section the word 'reserve' means the net premium value of the contract on the basis of the British Offices Life Tables, 1893, Om (5), with interest at the rate of four per cent. per annum.

"12. When no apportionment is made of the insurance money as hereinbefore provided, all persons interested as beneficiaries under this Act shall be held to and shall share equally therein.

"13. The minister may refuse to enter into an insurance contract in any case where there are in his opinion sufficient grounds for his refusing.

### Premiums

"14. (1) The insurance contract may provide for the payment of a single premium, or of premiums uniform throughout the life-time of the insured, or during the life-time of the insured for a period of ten, fifteen or twenty years, or until he attains the age of sixty-five years;

"(2) The premiums payable under the various plans of contract shall be those shown in the schedule to this act.

"15. No medical examination or other evidence of insurability shall be required in respect of any contract issued under this act: Provided, however, that the minister may, for the purpose of determining whether he shall refuse to enter into a contract of insurance in any case under the provisions of section thirteen of this act, require such medical examination or other evidence of insurability of the insured as he may deem necessary.

"16. The insurance money payable under the contract shall be unassignable and shall not be subject to the claims of creditors of the insured or of the beneficiary.

"18. The moneys received under the provisions of this act shall form part of the consolidated revenue fund, and the moneys payable under the said provisions shall be payable out of the said consolidated revenue fund.

### Administration

"19. (1) The provisions of this act may be administered in such department or departments of the Government as the Governor-in-Council may from time to time determine.

"(2) The superintendent of insurance or such other officer as may be appointed for that purpose by the Governor-in-Council shall, within three months after the close of each fiscal year, prepare for the minister a statement showing the amount received for premiums during the last fiscal year for all insurance contract entered into previous to the said date, the amount of all sums paid in connection therewith during the said period, also the number of new contracts entered into since the previous statement and the gross amount thereof, with such further details and particulars as the minister deems advisable.

"(3) The minister shall lay the said statement before parliament within fifteen days after the statement has been submitted to him if parliament is then sitting, and, if not, then within fifteen days of the opening of the session of parliament held next thereafter.

"20. No application for insurance shall be received under this act after the first day of September, nineteen hundred and twenty-two.

"21. This act shall come into force on the first day of September, one thousand nine hundred and twenty."

# Growth and Possibilities of Aviation Insurance\*

A Development of the Past Two Years—Flying for Commercial Purposes May be Expected Soon—Three Companies Now Prepared to Write Business in Canada—Coverages, Terms and Rates—Some Results in the United States

By HEDLEY C. WRIGHT

Assistant Manager for Canada, London Guarantee and Accident Co., Ltd.

**T**HE business of Aviation Insurance did not take definite form until the spring of 1919, and our study of it will be interesting, not so much because of what it has been or of what it is, but rather because of what it is likely to become.

It was only in 1909 that Bleriot made the first flight across the English Channel and only a few months back the first trans-Atlantic flight was made.

Between the time of the first channel flight and the outbreak of war, flying scarcely went beyond the experimental stages. Then on the outbreak of war it received an unparalleled impetus. Neither men or money were spared in its development; but it was all for war purposes. Since the armistice much attention has been given to the question of civil flying, which to-day is still but an infant in swaddling clothes. In the few moments at our disposal we will attempt to take a look into the future and see what justification there is for hoping that in the fullness of time the infant will grow into sturdy manhood.

## Good Field in Canada

The commercial growth and prosperity of a country necessarily depend upon the means of transportation at that country's disposal. It is stated by those closely in touch with aeronautics that aviation can be wisely developed so that it becomes an efficient means of transportation. And the possibilities of commercial aviation seem to be more bright in Canada than in many other countries, such as for example in the British Isles, where up to the present more has been done than here to develop the business. There the short distances, the completeness of railway transportation and prevalence of fog tend to limit air transport; but in Canada conditions are different. The big distances between our commercial centres, the vast areas still to be surveyed and developed, the clear atmosphere and the broad inland waterways, lending themselves admirably to the use of flying boats, all invite the peaceful conquest of the air.

Up to the present, commercial aviation has not taken really profitable or tangible shape anywhere, and possibly it is less developed in Canada than in most of the other countries where it has been receiving attention. Amongst the aerial activities on this continent to date may be mentioned:

1. The carrying of passengers for joy rides. It is reasonable to assume that the next development will be the carrying of business men as a time saver, as is being done by regular aerial passenger lines in Europe.
2. Photographic and survey work.
3. Mail carrying.
4. Carrying small cargoes of goods.

## Conclusions of Air Conference

Governments are recognizing the need for encouraging flying, and only the other week Mr. Winston Churchill, the Imperial Secretary for War, announced at the Air Conference in London that the Imperial Government intended to help civil aviation by every means in their power. It is interesting to know in passing that the Air Conference in question came to two important conclusions. The first was that the state which first makes aviation pay commercially

will win in the next war. And here it may be noted that Marshall Foch is reported to have stated that the next war will begin with a great battle in the air, and the side which wins that battle and gains control of the air will have a lasting advantage over the other side. It is further believed that in war time what the mercantile marine is to the navy, civil air fleets will be to the Royal Air Force.

The second conclusion of the Air Conference was that commercial aviation in Great Britain, where the matter has been receiving considerable attention, is at present far from being a paying business. This being the case, we in Canada must not expect too great results too soon.

The convention dealing with international air navigation matters will shortly come into being among all the allied states. The text of this convention was adopted by the Supreme Council of the Peace Conference in September, 1919, and defines the law on nationality marks, certificates of navigation, licenses for air pilots, aerial signalling, etc. The problem of custom duties has been based on the principle of the sovereign rights of all states to the atmosphere over their respective territories.

## Air Board in Canada

The Canadian government is alive to the situation and has created an Air Board, whose functions are to supervise all matters connected with aeronautics. The Air Regulations, 1920, issued by the board provide amongst other things for:—

1. The examination and licensing of all pilots.
2. The inspection, licensing and regulating of all aircraft, aerodromes and air stations.
3. The prescribing of aerial routes.
4. The undertaking of such technical research as may be required to develop aeronautics.
5. The control and management of all aircraft and equipment necessary for the conduct of any of His Majesty's services.

## Insurance Will be Required

Now as regards the insurance of aircraft. I need not remind this gathering that the credit system of a country depends upon insurance. And insurance on aircraft is naturally essential to the success of commercial aviation; for, without insurance facilities, men will not risk their capital, pilots will not risk their limbs, passengers will not risk their lives, and merchants will not risk their goods in schemes of air transportation.

As far as I know there are at the present time two American companies and one British company prepared to write fire casualty aviation insurance in Canada, and we will now briefly examine the coverings obtainable and the approximate premiums charged.

1. Public Liability.—Taking care of all claims in excess of the first \$50 against owners of aircraft for accidental bodily injury caused by the aircraft to any person other than an employee of the assured or passengers. Limits of 5 and 10. Premium \$100.
2. Property Damage.—Providing for all claims in excess of the first \$50 for destruction of or damage to property not owned or controlled by the assured or conveyed by the aircraft of the assured. Rate 5 per cent.
3. Collision Insurance.—Covering damages to the aircraft and necessary accessories whilst in or on the same, as

\*An address before the Insurance Institute of Toronto.

the direct result of accidental collision or impact with any object while the aircraft is in the air or on land or water under its own power. The first 20 per cent. of any loss or damage to the aircraft and also loss or damage to propeller and under-carriage are excluded. Rate 12½ per cent.

4. Fire Insurance.—Covering loss or damage in excess of the first 10 per cent. caused (1) by fire, explosion, self ignition or lightning to the aircraft of the assured or to accessories whilst in or on the aircraft; (2) while being transported in any conveyance by land or water. Rate 4 per cent.

It may be of interest, while on the subject of fire hazard, to mention that following a crash a number of fires have been caused through heated parts of the engine coming into contact with gasoline vapour. At the present time an aeroplane on the ground is a much more hazardous fire risk than an automobile, because in the case of an aeroplane there is very little chance of putting a fire out when it really has a start, particularly if the tanks are full. This means that the salvage is negligible.

5. Theft Insurance.—Covering the assured against loss or damage in excess of the first 10 per cent. to the aircraft by burglary, theft, robbery or pilferage by any person or persons other than employees of the assured. Rate 1 per cent.

The purpose of the various deductions is, of course, to impress upon the assured the fact that he is a co-insurer and to encourage him to exercise care.

#### For Six-Months' Term

The term of the policy is for six months covering the principal flying period in Canada up to the present. It is considered wise in any event to limit the term of the policy to six months. Aeroplanes are subject to considerable and rapid deterioration, and it is wise to have an opportunity of inspecting them before renewing the insurance.

Cargo insurance may also be obtained at an average rate of one quarter of one per cent.

Personal accident insurance on pilots and passengers is also purchasable either by means of a coupon policy covering from sunrise to sunset or by a policy for a longer term. The coupon rates for \$5,000 for accidental death and \$25 per week for 26 weeks for total disability and \$12.50 per week for partial disability for 26 weeks are \$10 for a pilot and \$5 for a passenger. A policy on a pilot on an annual basis is purchasable at the rate of approximately 10 per cent. on the amount of the principal sum insured.

The commission payable on all classes of aviation insurance is 10 per cent.

#### Attitude of Life Companies

As regards life insurance, the life companies in Canada have, I understand, discussed the situation from time to time, but they find difficulty, owing to the experimental nature of the business and the lack of adequate statistics, in arriving at a premium charge for life policies for aviators, and up to the present time the business is not being sought by the life companies.

The rule of one of the large life companies is:—

"No amateurs or aviators engaged in fancy or exhibition performances will be accepted. Experienced aviators engaged in commercial or patrol work as pilots, or persons engaged in similar work as passengers, will be accepted for a maximum amount of \$2,000 on any plan, except term insurance, subject to a minimum extra premium of \$50 per \$1,000. The extra will vary, according to the degree of hazard involved."

It would be helpful to the development of commercial aviation if the life companies could see their way clear to institute a class for aviators and pending the experimental stages of the business arrange a pool or in some other way work out a scheme which will enable them to encourage the development of aviation at not too great a cost to themselves.

In underwriting aviation business, it is already recognized that many things must be taken into consideration, and undoubtedly there are many more which will be learned only by experience as the business develops. Here are some of the things to be taken into consideration:—

1. Record of the firm who owns the machines—from knowledge of the company's record and personnel can be judged the spirit of its organization and whether the ground engineers are capable and careful at their work. Carelessness with aeroplanes spells disaster.

2. Types of machine and engine.—The reliability of the machine or engine can be judged from its past records, or in the case of a new type from the previous work of the designer.

3. Record and standing of pilots.—A great percentage of the risk depends upon the pilot. He has control of the aeroplane, and no matter how good the machine may be, it can come to grief easily under the guidance of a bad pilot.

4. Nature of flying being carried out.—This needs no explanation. Obviously a higher rate must be charged for a machine flying from Toronto to Calgary than for one flying from Toronto to Hamilton. Again, a machine engaged in photographic or survey work and flying away from a recognized air route is a far more serious hazard than that of a machine travelling on a regular air route and simply carrying passengers.

It is customary to exclude covering an aircraft while it is flying between one hour after sunset and one hour before sunrise of any day.

The rating of cargo is affected by methods used in packing, whether it is easily damageable, the effect upon it through exposure to atmospheric conditions, and so on.

#### Past Experience

As already stated, it is difficult to secure statistics at this time. It may, however, be of interest to give a few figures which have been published on American and British civil aviation experience. The American experience for the year ending May, 1919, and derived from reports of the Washington, Philadelphia and New York postal service, supplies the following particulars:—

Number of flights projected .....	1,263
Number of flights accomplished .....	1,208
Total mileage flown .....	128,255
Number of parcels carried .....	193,021
Total expenses in dollars .....	137,900
Forced descents, due to motor .....	37
Forced descents, due to weather .....	53
Deaths .....	2
Accidents to persons .....	6
Total loss of machine .....	2
Other losses .....	3

It is of interest to compare the experience of British civil aviation, as given out by the British Air Ministry, covering a period of six months: October, 1919, to March, 1920:—

Number of flights .....	21,000
Hours of flight .....	4,000
Passengers carried .....	52,000
Total mileage flown .....	303,000
Accidents .....	13
Deaths .....	2
Pilots killed .....	2
Pilots injured .....	6
Passengers injured .....	10
Passengers killed .....	1 in 10,000

The results of the "Paris-London" express route over a period of fourteen weeks were as follows:—

Flights projected .....	213
Flights accomplished .....	177
Flights abandoned .....	19
Flights interrupted .....	12
Total miles flown .....	48,090
Average speed per hour .....	104

**Opened its First Canadian Office in 1909.**

Payments to Canadian policyholders to date, plus commissions and salaries to Canadian representatives, rentals and miscellaneous expenses of Canadian offices and investments in Canadian bonds,

**EXCEED MATERIALLY**

the total premiums received from Canadian policyholders.

*This is sound evidence that this Company has done  
and is doing much to benefit Canada and its citizens*

**The Prudential Insurance Company  
of America**

FORREST F. DRYDEN, President

HOME OFFICE: NEWARK, N.J.

INCORPORATED UNDER THE LAWS OF THE STATE OF NEW JERSEY  
*Founded by John F. Dryden, Pioneer of Industrial Insurance in America*

The Handley-Page Service, operating between London and Paris and London and Brussels, in November, 1919, carried 154 passengers and 19,900 pounds weight of parcels.

It is probable that more authentic and extensive statistics will in due course be obtainable from the Canadian Air Board.

#### Air Possibilities Deserve Attention

On the whole, I am persuaded that the aviation situation in Canada gives us cause for sane optimism rather than pessimism. Given reasonable support from the government, the public and the insurance companies, it should be a means of assisting materially in the development of the Dominion during the next twenty-five years. In some respects, perhaps, other countries are giving the matter more energetic atten-

tion than ourselves. It may not be out of place here to call attention to the size of the Zeppelin, L. 71, which was recently surrendered by Germany to Great Britain. It is 745 feet long and has a maximum speed of 75 miles per hour, and is equipped with engines of 2,100 horse-power. When flying at 45 miles per hour it is capable of remaining aloft for as long as a week and of traversing a distance of 8,000 miles. In the light of this, who can tell where the next progressive step will lead, or measure the magnitude of the future of aviation?

Finally, I am confident that no Canadian will neglect any opportunity to make Canada greater, commercially, by means of aviation, and that no Britisher will fail to do his share in making the Empire invincible in the air, as on the sea, in all righteous causes.

## Uniform Conditions in Fire Insurance\*

Some Comments on the Bill Drafted by Bar Association—All Canada Insurance Federation Proposed Entire Policy Should Be Uniform—Conditions Primarily Affect Insured

By T. L. MORRISEY

President, All Canada Fire Insurance Federation, Manager for Canada, Union Assurance Society, Montreal

**T**HIS act, as you know, has been under consideration by the Canadian Bar Association for the past three or four years and the provisionally approved act now before you is the result of the combined wisdom of that body. Is it any wonder, therefore, that I approach the subject, or offer anything in the way of criticism with fear and trepidation. I intend to hedge, however, and claim "the whole without préjudice."

Before discussing the merits—it is hard to get away from the legal terminology—I would like to acknowledge on behalf of those engaged in the fire insurance trade—vide privy council decisions—the debt of gratitude they are under to the Bar Association for the good work it has done in advancing the movement for uniform policy conditions throughout Canada to its present stage.

#### Concern of Premium Payers

I should also like to take advantage of this opportunity of directing attention to a popular delusion that this is a question between the insuring public and insurance companies. Nothing could be further from the truth. It is admitted it would be a convenience to insurance companies to have uniform conditions, but what these conditions may be interests insurance companies least of all. They can adapt themselves to any conditions. Those really interested are the people who pay premiums to insurance companies and the question resolves itself into one between the premium payers who have fires and the still greater number of premium payers who don't, and as between the two the latter are far more entitled to consideration either at the hands of our legislators or before the courts.

The insurance company is simply the medium through which the two classes of premium payers carry on their operations; and that fact once admitted, it must be recognized that anything unduly favoring the class who have fires can only be at the expense of the class who do not have fires. Much has been said and written of late regarding the fearful fire waste of the country. Is it not time that a practical step be taken towards curbing that fire waste? Discourage the fire waster and encourage the property conserver and you have taken such a step.

#### Policies Might be Uniform

Let us now get down to the consideration of the question before the meeting. The All Canada Fire Insurance Federa-

tion, which body I speak for, was extended the courtesy of reviewing the draft act and given the opportunity of offering criticism and suggestion. Our first suggestion was that it would be advantageous to have not merely the conditions but the whole policy form standardized as they have in the State of New York; the advantage of this is that every insurer would define in identical language the risk assumed. What the objection is has not been disclosed, but the suggestion has not been adopted.

Criticism is offered most respectfully on the following items:—

*Section 2, Subsection 4, Interpretation.*—We suggest amplification and that the subsection read: "Property includes use and occupancy, rents, charges and profits, where these form the subject matter of insurance."

*Section 4, Contents of Policy.*—The policy is a contract between the parties—the assured and the insurer—and it must of necessity contain the names of the parties. The section also provides that the name of the person to whom payable shall appear. If, as in the majority of cases, the money is payable to the assured, as already stated his name cannot help but appear; if to a third party, it is hardly conceivable how the loss could be made payable to any such party without expressing his name.

As to the additional requirements of the section, the subject matter of the insurance, the indemnity for which the company may become liable, the event on the happening of which such liability accrues,—

What better argument could be adduced in favor of a standard form?

#### Exception Suggested

Another suggestion of ours which evidently did not find favor with the commissioners was that the exceptions include:—

- (1) Loss by theft.
- (2) Where assured has not used every effort to save property.
- (3) Where a building or material part thereof has fallen.

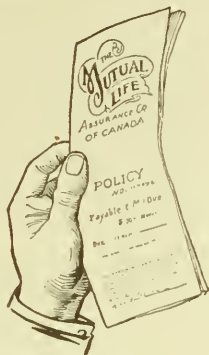

The argument is:—

(1) Loss by theft is not loss by fire. Where such loss is not excepted it leaves the door open to fraud.

(2) Where the property is under the control of one party to the contract it should be incumbent on that party to do his best to prevent its destruction.

\*An address before the provincial insurance superintendents' conference, Winnipeg.

# The Ever Progressive Mutual

To meet changing conditions, life insurance experts have continued to evolve more liberal policies until to-day it would seem as if every possible benefit had been included.

The development of life insurance has been rapid, not only in the number of policies issued but also in the more liberal conditions incorporated in the contracts, and the Mutual Life of Canada has either initiated or adopted every improvement consistent with safety that has been made in the modern life insurance policy.

Mutual policies are payable immediately upon receipt of proofs of death.

Mutual policies are indisputable after two years from date of issue.

Mutual policies impose no restriction on account of residence, travel or occupation (excepting military or aeronautic service).

Mutual policies give the assured one month in which to make payment of the premium.

Mutual policies provide for liberal cash surrender values, or in place of cash the company will issue paid-up insurance or term insurance equivalent in value to the cash surrender value.

Mutual policies can be secured payable by monthly instalments throughout the life-time of the beneficiary, and if the policy is on the endowment plan the payments continue until the death of the survivor, whether assured or beneficiary.

Mutual policies can be secured which provide that the premiums shall be waived in the event of total and permanent disability overtaking the assured before reaching the age of sixty. Not only so but the company will begin to pay to the assured a monthly income, which will not be deducted from the value of these contracts at maturity.

*Write for particulars of Mutual Life contracts.*

## THE MUTUAL LIFE ASSURANCE CO. OF CANADA

Waterloo

Ontario

HUME CRONYN, M.P.,  
President.

CHARLES RUBY,  
General Manager.

(3) Where a building or material part has fallen the character of the risk has changed and its value may have disappeared.

#### Section 7, Coinsurance

This condition provides that where a policy contains a coinsurance clause, it shall have stamped on its face, "This policy contains a coinsurance clause," but it goes on to say the clause shall be deemed an addition and as such subject to the provisions of section 6—i.e., left to the Courts to say whether it is just and reasonable. The reason is not apparent. Coinsurance is simple in its application. If it is ever just and reasonable, it is always just and reasonable. My own personal view is that the practice of insuring property without the clause is unjust and unreasonable. There is no more reason for expecting a company to sell indemnity without providing for coinsurance than there would be to expect the drygoods man to use a 36-in. yard stick when selling to one customer and a 40-in. yard stick when selling to another, or the grocer to sell to one customer at 16 oz. to the pound and 20 oz. to another.

Another telling illustration that has been used is: The issue of policies free from coinsurance is equivalent to fixing the rate of taxation and allowing the property owner to do his own assessing. To preserve the equities between the parties all policies should be subject to coinsurance and the rate graded according to the percentage of insurance to value agreed upon.

Our suggestion is that the objectionable words be struck out, making the wording to conform to the present Ontario statute and that the section be transposed to follow section 4.

#### Statutory Conditions Property Not Insured

The original draft specified what was not insured under the final draft the words "unless otherwise stated in the policy" appear. This is very objectionable. Under the blanket form of policy now so commonly used, where the risk is described in such general terms, it might become necessary to specially except "money books of account, etc.," and even then it might necessitate the exception being introduced as a "variation." It would give rise to a lot of trouble and the words had better be struck out. If this provision be deemed necessary then we would suggest that the words "unless otherwise specifically stated in the policy" be substituted.

#### Four Risks Not Covered

Our recommendation was to interpolate the words "directly or indirectly," and add the word "Earthquake." The intention evidently is to except losses from the specified causes and it would certainly seem desirable to place the meaning beyond doubt. Riot and civil commotion insurance is becoming very common and whatever would tend to make clear where the liability under one form begins and the other ends would be welcomed.

Earthquake is a catastrophe not contemplated in the ordinary fire hazard. Cover can very readily be obtained for all the excepted hazards at very low rates of premium.

We would again urge that this section read: "Loss or damage caused directly or indirectly by invasion, insurrection, riot, civil war or commotion, or military or usurped power, or by order of any civil authority; or by theft; or by earthquake; or by neglect of the assured to use all reasonable means to save and preserve the property at and after a fire or when the property is endangered by fire in neighboring premises." Subsection (C), strike out the words "and consent."

(4) *Use of Red Ink.*—Amend by interpolating after the word "printing" the words "on the face of" and the word "except" the words "the number."

(5) *1 Misrepresentations.*—This is limited to misrepresentations made when "applying for insurance." It is equally important that misrepresentations made during the currency of the policy should void the policy. The present Ontario condition meets this objection and it should be adopted in its entirety.

(6) 5 (b) The words "heating or cooking" might fairly be added after the words "refined oil for lighting."

5 (c) *Change of Title.*—The original draft included "or in the case of chattels is mortgaged," but these words are omitted in final draft—a retrograde step. Such a fact is essentially "a fact material to the risk" and as such should be communicated to the insurer.

(7) 5 (D) Add the words "or being a manufacturing establishment ceases to be operated for a period of thirty days."

7. *Material Change.*—Substitute the conjunction "or" for "and," making it obligatory upon the assured to communicate any change material to the risk within his "control or knowledge."

9. *Mortgagees and other Creditors.*—The original draft required notice of assignment and consent of insurer, otherwise policy void; the final draft omits this formality and implies the right of an assured to assign his interest in the policy. This is a very radical departure from a settled practice which has always been looked upon as vital to the contract of insurance. We cannot too strongly urge the reinstatement of the original condition.

9. (b) It would seem sufficient to provide that the policy cannot be cancelled or altered without notice to mortgagee. It is difficult to foresee how far-reaching the words "or otherwise dealt with" might be, and it is therefore suggested they be struck out.

10. *Termination of Insurance.*—The words "at any time before loss" should be struck out. This limits the rights of insurer to cancel before loss. It frequently happens that the occurrence of a loss is the warning signal and the right of the insurer to cancel at any time before or after a loss should not be abridged in any way.

11. *Salvage.*—The original draft required assured to make an inventory, omitted from final draft. Surely that is not an unreasonable requirement. How can the assured prove his loss without going through some such process. The obligation to prove the loss is on the assured, not the insurer. The duty of preparing an inventory should be specifically laid upon the assured.

15. *Requirements After Loss.*—This condition is more remarkable for what it does not contain than for what it contains. The assured is not even required to state his interest in the property destroyed. When the property is destroyed the insurer practically occupies the position of a purchaser and is entitled to full information as to the title of the property for which he is called upon to pay.

17. *Appraisement—Subsection (E)*—This subsection which is entirely new seems to invite complications. The general practice is for the companies to act together in the adjustment of the loss, usually as a matter of self-interest, but just how this can be enforced is not quite apparent. Suppose one company stands out, should the appraisement be held up? How is an unlicensed company to be reached? Then for the lawyers to impose upon a poor unfortunate carpenter and builder the determination of the amounts to be paid under non-concurrent policies is surely going the limit. Why, some of the questions arising in such instances would puzzle their brethren from Philadelphia. The apportionment of costs as between the companies might safely be left to the companies to fight out amongst themselves. This subsection serves no useful purpose and might safely be omitted.

#### MUTUAL LIFE'S PROGRESS

The Mutual Life of Canada reports the following assurance secured during the first six months of the year:—

Month.	1919.	1920.
February . . . . .	\$2,914,500	\$4,511,609
March . . . . .	3,060,787	6,023,815
April . . . . .	3,664,387	4,271,172
May . . . . .	3,501,134	3,646,622
June . . . . .	3,727,720	3,984,547
July . . . . .	3,170,175	3,393,397

# The Candle of Life is Burning

Hour by hour the flame burns the candle shorter until suddenly—a gust of wind—a flicker—and the flame expires.

So with your life. You do not know when the gust may come that will extinguish the flame of your life, but you know that it will come. Perhaps soon.

Familiarity with this fact often breeds indifference—indifference that results in suffering and privation to the family that might easily be prevented.

Confederation Life Policies are designed to prevent this. Do you really know the extent to which you and yours can be relieved of all chance of such misfortune?

The Confederation Life Association is a Canadian Company of established reputation.

It has for forty-nine years furnished the Canadian public with insurance service and has built up a large volume of business on the basis of absolute care for the interests of its policyholders, prompt and liberal settlement of all just claims and absolutely fair treatment of its agents.

Interesting literature as to any or all plans of insurance will be gladly sent on application to the Head Office, Toronto, or to any agent of the company.

# Conference on Uniformity of Legislation in Canada

Model Fire Insurance Policy Act was One of Main Subjects Discussed this Year—  
Revised Draft will be Prepared—Consolidation of Statutes, Sales of Goods, Partnerships, Labour Laws, and Devolution of Estates were other Subjects Discussed

UNIFORM conditions in fire insurance policies was one of the subjects again taken up at this year's meeting of the Commissioners on Uniformity of Legislation in Canada, held in Ottawa, August 30 to September 3. The officers of the conference 1920-21 were as follows:—

President, Sir James Aikens, K.C., Winnipeg, Man.; vice-president, Mariner G. Teed, K.C., St. John, N.B.; treasurer, Frank Ford, K.C., Edmonton, Alta.; corresponding secretary, J. C. Elliot, London, Ont.; recording secretary, John D. Falconbridge, Toronto.

Local Secretaries (for the purpose of communication between the commissioners of the different provinces):—Alberta, Frank Ford, K.C., Edmonton; British Columbia, Avarid V. Pineo, Parliament Buildings, Victoria; Manitoba, Herbert J. Symington, K.C., Merchants' Bank Building, Winnipeg; New Brunswick, J. D. Pollard, Lewin, St. John; Nova Scotia, Stuart Jenks, K.C., Halifax; Ontario, John D. Falconbridge, 22 Chestnut Park, Toronto; Prince Edward Island, W. E. Bentley, K.C., Charlottetown; Quebec, E. Fabre Survever, K.C., 160 St. James St., Montreal; Saskatchewan, Robt. W. Shannon, K.C., Regina.

It was ordered that the following resolution, adopted in 1918, "That the members of the Committee on Uniform Legislation of the Canadian Bar Association may attend this conference and participate in the discussion, but without the right to vote," should be communicated to the Canadian Bar Association, together with an invitation to all members of the association to attend any meetings of the conference.

## The Legitimation Act

The report of the recording secretary on the Legitimation Act was presented. After discussion it was resolved that the conference receive the report of the secretary and the commissioners reporting on the adoption of the Legitimation Act by the provinces of Manitoba, Prince Edward Island, New Brunswick and Saskatchewan, and, while recognizing that the acts as adopted by those provinces are not identical in form but contain similar enactments, recommend to the provinces which shall enact this law that the shorter form of statute as found at page 53 of the Proceedings of the Conference, 1919, be adopted.

The commissioners considered the question of the revision or consolidation of statutes and the indexing of statutes submitted by the committee on legislative drafting, and drew attention to the cumulative index now printed by the province of British Columbia as an excellent example. It was resolved that the commissioners go on record as approving the publishing each year by the authorities of each province of cumulative index of the statutes from the date of the last revision.

The commissioners from British Columbia were requested to forward to the attorney-general of each of the provinces several copies of the sample index and a copy of the memorandum.

## Sales of Goods and Partnership

The committee on sales of goods and partnership reported that the Sales of Goods Act, 1893, was now in force in all the provinces of Canada, except Quebec, having been adopted in New Brunswick and Prince Edward Island at the instance of the commissioners from that province in 1919, and in Ontario upon similar recommendation in 1920; that the Factors Act, 1889, was in force in Alberta, British Columbia, New Brunswick, Nova Scotia, Ontario, Prince Edward Island and Saskatchewan, having been adopted in Prince Edward Island in 1920, and that it would probably be adopted in Manitoba in 1921, and that as a result of adoption on recom-

mendation of commissioners in New Brunswick, Ontario and Prince Edward Island in 1920, the Partnership Act, 1890, was now in force in all the provinces of Canada except Quebec. A report as to the state of the law on these subjects in various British Dominions and with reference to limited partnerships and registration of partnerships was also submitted to the conference.

A draft of a proposed act respecting warehousemen's liens was presented by the commissioners from British Columbia, and was considered clause by clause and certain amendments adopted, and the act was subsequently referred to the commissioners of New Brunswick to draft a model bill and report at the next conference.

## Labor Laws

Senator Robertson, Minister of Labor, addressed the commissioners on the subject of "Uniformity of Labor Laws in Canada," and referred to the advantage of uniformity in the laws relating to the welfare of those engaged in industrial work in the several provinces of the Dominion of Canada; at the conclusion of his address the subjects discussed by him were referred to by the president, the vice-president and some of the other members of the conference.

The report of the committee on a uniform Bulk Sales Act was presented by the commissioners of British Columbia, and was considered clause by clause, and after certain amendments were approved the act was referred to the Manitoba commissioners to revise and forward copies to the commissioners for submission to their respective legislatures.

## Fire Insurance Conditions

The report of the committee upon a model statute on fire insurance conditions, together with a draft bill, was presented by R. W. Shannon. The conference thereupon resolved itself into committee of the whole and considered the bill section by section. Mr. Jenkins, representing the Canadian Underwriters' Association, was present, and took part in the discussion of the act. After discussion of the remaining sections of the proposed act and deciding upon some changes therein, the act was referred to the Manitoba commissioners and Mr. Shannon, to be redrafted in accordance with the amendment decided upon, and reprinted and forwarded to the various commissioners to be by them brought before their legislatures.

W. B. Wallace presented the report of the committee to which had been referred the Conditional Sales Act, and the Draft Act submitted was discussed at some length.

## Devolution of Estates

Francis King presented the report of the committee on the devolution of estates. On motion of Mr. Ellis, seconded by Mr. Pitblado, it was resolved that the conference affirm the principle of the desirability of uniformity of laws with respect to the devolution of estates, both real and personal.

On motion of Mr. Pitblado, seconded by Mr. Symington, it was resolved that in endeavoring to bring about uniformity of legislation in regard to the devolution of estates, real and personal property of intestates should be treated in the same manner. After discussing the various principles of the proposed act it was resolved that the matter of devolution of estates of intestates be referred back to the commissioners for Ontario, with instructions to draft a model act in the light of the discussion which had taken place, and to have copies of the act printed and sent to the commissioners for

the several provinces three months before the next session of the conference.

The act respecting conditional sales of goods was discussed clause by clause and certain amendments decided upon.

The conference later resumed consideration in committee of the whole of the model bill respecting conditional sales of goods. It was resolved that this bill be referred to the Saskatchewan commissioners to redraft in the light of the discussion and having in mind the act adopted by the United States, and to report with a model act at the next session of the conference.

Mr. H. J. Symington presented the report of the committee on company law. After considerable discussion as to the abolition of the doctrine of *ultra vires* and also as to whether incorporation should be by memorandum of association or letters patent the conference adjourned.

The subject of wills, including any acts effecting the Wills Act, such as dower, courtesy, etc., was referred to the Alberta commissioners to bring in a report at next year's conference upon the whole subject with a view to having a model act based thereon.

The question of reciprocal enforcements of judgments was referred to the Prince Edward Island commissioners to draft a model act and report at the next session of the conference.

#### Property Rights

The matter of the laws relating to the protection and property rights of married women was referred to the British Columbia commissioners with a request that they investigate and report on the laws of the different provinces relating to the above-named subject, such report to be the basis of future action.

It was resolved that the president of the conference, Sir James Aikens, be requested to urge upon the governments of Quebec, Nova Scotia and Prince Edward Island the desirability of their appointing commissioners or representatives to this conference.

It was resolved that the subject of succession duties, including probate, legacy and estate duties be referred to the commissioners from Nova Scotia to investigate and report thereon to the conference with such suggestions as they deem advisable.

Reverting again to company law, on motion of Mr. Pitblado, it was resolved that any model act drawn make provision for doing away entirely with the doctrines of *ultra vires* in so far as it relates to corporate contracts along the line of the resolution passed by the Canadian Bar Association in 1919, but that at the same time the model act attempt to give some protection to the shareholders or creditor if the company is engaged or attempting to engage in business outside the scope of the objects of incorporation.

On motion of Mr. Symington it was resolved that the Manitoba commissioners be instructed to draft the proposed act in accordance with the principle of incorporation by memorandum of association.

It was resolved after some further discussion that the matter of the company law be referred back to the Manitoba commissioners for the purpose of drafting a model uniform act upon the subject in the light of the discussion, and recommendations that have been made at this meeting, and to report at the next meeting of the conference.

Officers of the conference were elected for the ensuing year as follows: President, Sir James Aikens, K.C.; vice-president, Mariner G. Teed, K.C.; treasurer, Frank Ford, K.C.; corresponding secretary, J. C. Elliott; recording secretary, John D. Falconbridge.

It was resolved that in 1921 the conference meet four days before the opening of the Bar Association Convention.

It was resolved that the corresponding secretary be requested to notify the different commissioners at least one month in advance of the time and place of meeting of the conference, and that at the earliest moment copies of the minutes and verbatim report of the discussion be sent to the local secretaries of the commission.

## PLATE GLASS INSURANCE UNDER HIGHER RATES

Result of Rapid Rise in Value of Glass—Supply Now More Plentiful, However

BY A. WYBURN EASTMURE

*Managing Director, Casualty Company of Canada*

CONDITIONS arising out of the war have been a logical excuse and explanation for the enormous increase in the price of practically all staple goods, and plate glass is no exception. Plate glass is imported into this country, a fact which, coupled with the high freight rates and transportation risk, is an adequate reason for the prevailing price and high premiums now charged for the insurance of plate glass.

Although realizing that war conditions were not always to exist, companies insuring glass were, until July last, loathe to put into force such increases in the premium rates as the glass market warranted, yet the experiences of the past four years rendered it absolutely necessary that an increase of approximately 100 per cent. should be made throughout the whole Dominion. It is impossible to forecast an immediate reduction in insurance rates, but owing to the fact that Belgium and Southern France, Canada's chief source of supply, are again manufacturing and exporting, the trade outlook is somewhat improved; this, combined with the decline in the automobile industry, which used many thousand square feet of plate glass annually in the manufacture of windshields, and the enforcement of the present building restrictions, once more enables dealers to stock up and meet the ever-increasing demand.

With glass premiums assuming such large proportions—in many cases more than double what they were last year—the question is constantly asked whether the landlord or the tenant should bear the expense, and a curious fact not generally known is that unless dealt with by specific agreement neither one nor the other is legally responsible for broken plate glass.

#### Tenant Sometimes Bears Loss

Experience has proved that it is a wise tenant who carries insurance, taking care that the expenditure is accounted for under the terms of his lease. True, the landlord is responsible for glass broken by lightning, tempest or the settlement of a building owing to structural defects, but breakages may be due to many other causes such as defective setting, window dressing, slamming of doors, stones thrown by passing vehicles, or the pranks of small boys, not to mention the ninety and nine cases reported to the companies daily as due to "unknown causes."

A plate glass policy is self-protection to the holder, in that he can effect immediate replacement through his insuring company, instead of being put to the inconvenience of first getting in touch with his landlord (who, like the policeman, is never there when wanted), and with whom, when found, an argument as to who should assume the liability usually ensues, resulting often in considerable delay.

#### Insurance Companies Replace Glass More Cheaply

The yearly cost to owners and tenants for replacing breakages of uninsured glass is sufficient to pay the premiums on all lights not covered by policies, and investigation discloses the fact that individual customers pay more for such work than is paid for similar replacements made through an insurance company. The reason for this is that insurance companies are large users and can purchase plate glass at better prices than the individual; they also possess every facility for handling same and for making replacements.

Plate glass was never a more legitimate subject for insurance than it is to-day, and the protection provided is now regarded as a real necessity to the property owner and tenant.

In 1919 plate glass insurance in Canada was transacted by twenty-five companies, viz.: Twelve Canadian, seven British and six foreign companies. The premiums received during the year were \$375,473.00 and total losses paid \$226,206.00, showing a loss percentage as applied to premium income of 60.5 per cent. Data is not yet available for the present year, but it is hoped that it will show a more favorable ratio.

# Your Clients

How many prospects for life assurance are there in the territory you represent ?

How many of them can you insure ?

If you represented the NORTHWESTERN you could insure a very large percentage of them for, while the NORTHWESTERN takes no more chances than any other life insurance company, its officers believe that a life insurance company exists to insure lives and we usually find a way of doing so.

The NORTHWESTERN stands in the very forefront of Canadian Life Insurance Companies—its policies are the most modern to be found in Canada.

We are getting ready to enter new territory and are open to consider applications from capable life insurance men.

You will have the field all to yourself selling our new remarkable

## Double Indemnity Bond

A new plan of Life Assurance which gives twice as much protection for the same premium if death results from *any* accident.

# Canadian Hail Underwriters' Association Results

Good Results Reviewed at Annual Meeting in Toronto in November—  
Loss Ratios, Manitoba 24.2 Per Cent., Saskatchewan, 41.8 Per Cent.,  
Alberta, 34.4 Per Cent.—Competition With Municipal Insurance Scheme

**M**OST of the companies writing hail insurance in western Canada are members of the Canadian Hail Underwriters' Association. This organization held its annual meeting in Toronto on November 19 last, when the results for 1920 were reviewed. The secretary, H. H. Campkin, of Regina, had summarized the figures for the companies. He said in part:—

"The season of 1920 has proven a satisfactory one to the majority of the members. A glance at the map of the 1920 experience will show that the severe storm centres have been small but that there has been a considerable amount of scattered hail throughout all the provinces. The high prices of all cereal commodities have caused the farmers to seek more protection and this factor should not be lost sight of in considering the season's operations. And, further, owing to the failure of the 1919 crop in the western part of Saskatchewan, and parts of Alberta, farmers were compelled to take insurance to satisfy their creditors. With the exception of the province of Manitoba and a number of the townships in eastern Saskatchewan the majority of the townships show a large increase over the business of previous years.

"In preparing the various statements submitted to you throughout the year the fact was not lost sight of that many of the head offices were far removed from the scene of actual operations, and the information was therefore compiled with the view of allowing the figures to speak for themselves. If, however, this method fails to furnish the information that is required suggestions would be appreciated as to the best means of conveying same. The companies having their head offices in western Canada naturally base their operations on their own, and observed, experience.

## Province of Alberta

"The premiums received by members of the association this year amount to \$2,172,189 with losses of \$746,583 as compared with \$691,096 premiums and \$328,827 losses last year, or a loss ratio of 34.4 per cent. as compared with 47.58 per cent. in 1919. The premium income of the association has been affected by the successful operations of the municipal scheme in force in that province. They have, I understand, promulgated a rate of 6 per cent., which will cover their losses and expenses and provide a reserve.

"In reference to the reduced area (which is the four ranges west of the western boundary of Saskatchewan to township 46, etc.) the premiums collected in this area this year were \$124,446 with losses of \$28,896 as compared with \$4,685 premiums and \$5,055 losses of last year.

"In surcharge areas (in townships 41, 42, 43 and 44, in ranges 11, etc.) the premium income this year is \$63,384 with losses of \$14,497. Evidently the rate is detrimental to the receipt of business, for in 1918, which was the first year of the surcharge, the premiums received in the same area were \$138,799 with losses of \$8,403. In surcharge district No. 2 (being townships 51, 52 and 53, in ranges 27, etc.) the premiums received this year were \$3,376 with losses of \$1,658, while in 1918 the premiums received from the same area were \$11,180 with losses of \$337.

"The business for 1920 was written in 1336 townships. Of these 929 reported no losses; 202 had losses under 25 per cent.; 66 had losses under 50 per cent., and 139 had losses of 70 per cent. and over. The largest amount of premium received in any one township was \$16,294 and the smallest \$5.00. The largest amount of loss in any one township was \$27,509 and the smallest \$10.00.

"During the summer letters have been received from local agents complaining of the rates charged and pointing to the favorable experience their particular district enjoyed, and while no reports have reached me of non-association companies writing at a much reduced rate there appears to be a

strong feeling with the field force that the rates in certain areas do prevent the obtaining of business.

## Province of Saskatchewan

"With the exception of the southeastern part of the province crop conditions have been fairly good and the business was more distributed throughout the province this year than in any previous one. The business written by the members in 1920 amounts to \$3,607,951 with losses of \$1,509,004 as compared with \$2,122,485 premiums and \$1,659,652 losses of last year. The loss ratio this year was 41.8 per cent. as compared with 78.20 per cent. last year.

"The northern part of the province escaped any severe storm although there was scattered hail at many points. Nevill, Herbert, Cabri and Yellow Grass were the principal storm centres, as the map of 1920 experience will show. Taking again township 50 as the northern boundary at which business is written, there are about 3,000 townships in the province. Business was received from 2,521 of these; 1,791 report no losses, 302 had a loss under 25 per cent., 110 the loss was under 50 per cent., and in 318 the loss was 70 per cent. and over. The largest amount of premium received in any one township was \$14,508 and the smallest was \$2.00. The largest amount of loss in any one township was \$54,207 and the smallest amount \$2.00.

"The records of the reduced areas in the northeastern part of the province this year show premiums received of \$66,289 with losses of \$10,765 as compared with premiums of \$40,673 and losses of \$20,177 last year. In the reduced area in the northwestern part of the province the premiums received were \$8,985 and no losses as compared with \$2,107 premiums last year and no losses.

"In regard to surcharge area No. 1 (being townships 32 to 37 inclusive, in ranges 20 W2nd to 13 W3rd) the premiums received this year were \$124,101 with losses of \$17,063. When combined with the experience of previous years this surcharge area stands at: Premiums \$528,686, losses \$539,645.

"In reference to surcharge district No. 2 (Radville district) the premiums received this year were \$31,568 with losses of \$33,226. When combined with the experience of previous years this stands at: Premiums \$182,166, losses \$156,829.

"In surcharge district No. 3 (Hirsch district) the premiums received this year were \$11,671 with losses of \$9,606. When added to the combined experience of previous years this stands at: Premiums \$32,616, losses \$33,121. Those of you who are writing in this district know from experience that many of the farmers residing in this area are "hail farmers."

"Non-association competition was quite keenly felt at some points and, from the records, it would appear that in the eastern part of the province the members lost business as in many of the townships the premiums received this year were less than they were in 1919, while its generally conceded that more insurance was carried. The municipal hail scheme again had to raise a special levy on the seeded area and with the legislation passed last spring enabling a farmer to withdraw his land from the operations of the hail act it is reported that the acreage under the scheme was reduced by nearly 50 per cent. At the present time reliable information is difficult to obtain as to the operations of the past season.

## Province of Manitoba

"Premiums received in this province by members of the association in 1920 amount to \$295,565 and losses of \$71,535 as compared with \$304,777 premiums and \$84,936 losses last year. Business this year was written in 495 townships as compared with 492 last year. Of these 399 report no loss; in 33 the loss is under 25 per cent., in 13 it is under 50 per cent.,

and in 50 it is 70 per cent. and over. The largest amount of premiums received in any one township was \$7,329 and the smallest amount \$12.00. The largest amount of loss paid in any one township was \$7,580 and the smallest \$13.00.

"The surcharge area in the centre of the province yielded a premium income this year of \$7,370 with losses of \$858. The figures of the combined experience of this district now stand at: Premiums \$120,738, losses \$58,114. In the surcharge district in the southwestern part of the province, and contiguous to the Saskatchewan boundary, the premiums were \$24,558 with losses of \$1,895. The combined standing of this area is now: Premiums \$79,758, losses \$86,741.

"The competition of non-association membership in Manitoba was very keenly felt and, in addition to this, the municipalities are contemplating the organization of a scheme based largely upon the Alberta act. Should this scheme go into effect next year still greater difficulties are likely to be experienced in maintaining a premium income with the rates that are now in force."

### Premiums and Losses

A synopsis of premiums and losses as filed by members of the Canadian Hail Underwriters' Association for 1920 is as follows:

#### MANITOBA

	Premiums	Losses
Acadia Fire Insurance Co. ....	\$21,445	\$2,898

Mutual Fire Insurance Companies have no stockholders, therefore no profits are earned and distributed as dividends. BUT, every policyholder effects a saving, the same to him as a dividend, by the lower cost of his insurance. That our members appreciate the benefits of adequate protection at the minimum cost is indicated by the progress shown in schedule above.

H. B. ATKINS, M.L.A., PRESIDENT. PARKER R. REED, MANAGING DIRECTOR.

THEO. REIST, TREASURER.

## GROUP INSURANCE A SUCCESS IN CANADA

From the Manufacturers' Viewpoint, at Least—Welcomed in Industry—Only Certain Companies are in a Position to Handle the Business, However

IT is now a little more than a year since life companies were permitted to write group insurance in the Dominion, during which time a considerable amount of business has been transacted, although operations have been retarded somewhat by the labor unrest and the general industrial conditions which have prevailed.

The Canadian companies which are now writing this class of insurance include the Canada Life Assurance Co., the Sun Life Assurance Co., Manufacturers Life Assurance Co., Great West Life Assurance Co., London Life Insurance Co. The American companies doing business here are: Aetna Life Insurance Co., Equitable Life Assurance Society, Metropolitan Life Insurance Co., Prudential Insurance Co. and the Travellers Insurance Co.

### Viewpoint of Smaller Company

It will be noticed that only the largest and strongest companies are operating, and some of these are delaying action until the business outlook has improved. The chief reason for this is better explained in the words of another. The North American Life Assurance Company, in a circular addressed to agents, made the following comment:—

"It is just as well to point out that both from a company and an agency point of view there are two sides to this question. From the company's point of view there is the consideration that the premiums charged, if made competitive, are so low as to reduce the margin of prospective profit to a minimum. As a matter of fact, while the comparatively few American companies transacting this business had up until last year claimed a slight profit, the influenza epidemic entirely wiped that out, so that the business as a whole must up to the present time have netted a loss. One has to consider, too, that a company is compelled to assume a tremendous obligation and to build up a liability without the creation of any reserve fund. It is indeed a matter for the most serious consideration, whether our Canadian companies are large enough to accept the liability involved in the transaction of group insurance on any scale. Nor should we overlook the fact that the overhead charges necessitated through the appointment of inspectors and men in the field and at home office competent to look after the business makes the cost alone prohibitive unless a very considerable business is done. In brief, the chances of a substantial loss to the company are great, while the margin of prospective profit is extremely small. Furthermore, it should be remembered that in the United States, where group insurance was initiated, only a few companies have up to the present time considered it wise to venture into the field. At the present time only the very largest, and a very few of them are engaged in it. Ordinary business prudence demands on our part extreme caution and further light before we undertake it.

"Moreover, it is not clear that this class of business will result very profitably to the agents. The commissions are small, and unless the premiums charged are equal to the lowest, the agent has little likelihood of success in his canvass. The company's officials are alive to the situation, though not at the present time prepared to make a definite announcement."

### A Venture

From the above, it is apparent that group insurance in Canada is considered a venture, speaking from the viewpoint of the insurance companies. Those companies which are engaging in the business must first show that it is profitable, then perhaps more may follow, as the Dominion is sufficiently broad enough, industrially, to enable a healthy business to be carried on by a considerable number of companies. The country is at present being canvassed aggressively, and as our commercial organizations realize more the value of group insurance, the way should become easier.

As far as the scheme itself is concerned, there can be no doubt as to its benefits to the commercial organizations of this country and their employees. It is true that some people, particularly of the laboring class, consider any such schemes as traps or binding ties, which work to their disadvantage ultimately, but intensive advertising amongst this class, which can be accomplished through the daily press or by distributing literature, should overcome this difficulty, and then to bring the employers to an understanding would be a simple matter.

The Canada Life has summed up the advantages of group insurance as follows: "Many employees want life insurance protection, but are not insurable and cannot get a policy themselves. Many are not insured, because they spend all they earn and think they cannot afford a policy. Many who are husbands and fathers do not fully realize their responsibilities towards their families and fail to insure.

"The group plan puts all employees into the insurable and insured class. It gives each of them a policy without examination and without expense. It links the home and the dependents of the employees more closely to his work and his employer. The goodwill and appreciation of the home and family is a most important factor in developing loyalty and co-operation.

"It tends to retain the better class of men and women in office and plant who are of greatest worth to the success of the business, and who appreciate most the protection provided for them and their dependents. Their appreciation grows as time goes on when they see the cash benefits that are derived from insurance.

"Group insurance thereby becomes an investment that gives an increasing return to the employer by way of an interested class of employees, better team work, greater efficiency and reducing costs through labor turnover. It puts on a business basis the relieving of the distress that follows the death or total and permanent disability of employees, free from discrimination and free from the stigma of charity."

### Evidences of its Value

Several industrial and commercial corporations have given testimony as to the value of such insurance. The Dunlop Tire and Rubber Company is one of the largest firms in Toronto to adopt the plan. An official of the company stated that group insurance had undoubtedly been a success in his firm. The scheme had been adopted, he said, merely for the purpose of improving the lot of the workmen, and from the standpoint group insurance had lived up to all the advance claims. The Dunlop Company, he said, had recently taken steps to have a clause inserted in their policies which provided for a continuation of the insurance upon a workman who, through business depression, was laid off for a period. This insurance applied during a period up to three months, provided that the workman did not sever his connection with the firm in the meantime. At the outset a number of workmen looked upon this scheme with hostility, fearing that artificial means were being adopted to induce them to work harder. In the meantime, however, the value of the scheme had been brought home by the deaths of two members of the staff and the prompt payment of the face of the policies to the beneficiaries.

Information obtained from a number of other firms, including the Spanish River Pulp and Paper Mills, Limited; the A. R. Williams Machinery Co. Limited, and Ritchie and Ramsey, also of Toronto, was along similar lines. It was apparent, however, that no direct benefits to the company, pecuniary or otherwise, could be accounted for as a result of this insurance. It is perhaps a little too early to determine this question, since group insurance in most cases has been in operation considerably under one year.

On the other side, however, the experience dates farther back, and American firms have for that reason had an opportunity of studying the effects of this group plan of insurance. The Williamsport Radiator Co., of Williamsport, Pa., writes that the company is directly benefited by the feeling of better contentment among the employees.

# GROUP ASSURANCE A PROVEN SUCCESS

Although permitted in Canada only for a brief period, Group Assurance has already demonstrated its importance as a powerful factor in the improvement of relations between Employer and Employee.

The Sun Life Assurance Company of Canada has been entrusted with group contracts by many employers in Montreal and throughout the Dominion, and experience has impressed convincingly both upon our clients and upon ourselves the fact that employees are deeply appreciative of group assurance furnished to them, and are substantially influenced thereby in their attitude towards their employers and their employment.

We find that the employee's appreciation of the assurance dates as a rule from the time he receives the actual Certificate, bearing his own name and that of a beneficiary of his own choosing. This Certificate visualizes the cash benefits he or his family are to secure. It guarantees in black and white that he shall not suffer penury should disease or accident rob him of his earning power while he remains with his present employer. It guarantees also that in event of his death his wife will be provided for in a substantial manner. It shows increasing benefits with continuance of service.

Thus home influence and his own interest combine towards keeping him in his present employment.

Group assurance benefits are not costly. Premiums generally run from  $\frac{1}{2}$  of 1 per cent. to 1 per cent. of annual pay-roll.

The Sun Life group contract offers the following special advantages:

- (1) The broadest policy issued.
- (2) The lowest rates procurable.
- (3) Backing of over \$100,000,000.00 of assets.
- (4) Complete and rapid service throughout Canada.
- (5) Canadian assurance for Canadian workers.
- (6) Immediate coverage by Binding Receipt.

Firms having not less than fifty employees are eligible for group assurance, and each firm may introduce a scale of benefits adapted to its own requirements. Medical examination is not required.

*May we send you further information?*

# Public Workmen's Compensation Business Grows

Eight Million Dollars Per Year Handled by Boards in Canada—Manitoba Transfers from Individual Liability to Public Operation—Increase in Scale of Payments in Ontario—Ninety-Five Per Cent. Paid Back

By FRANK W. HINSDALE

Secretary, British Columbia Workmen's Compensation Board

**A** MARKED increase in industrial activity throughout the Dominion is indicated in the larger payrolls reported to the boards administering workmen's compensation acts in the several provinces. Each board reports a larger number of employers and the revival in work of general construction is particularly noted.

The increase in payroll and in the number of workmen engaged in industry, varying from 10 to 25 per cent. over the previous year, and to a much larger degree over those reported in three preceding years, and the unfortunate proportional increase in the number of accidents requiring attention has materially added to the work of administration. Owing, however, to the increased efficiency of the several staffs, and in a very large degree to the hearty co-operation of employers and workmen and physicians generally in complying with all the requirements of the boards, the increased work has been easily handled and the percentage of the cost of administration to the amount of money collected in assessments has steadily decreased. It has also resulted in a material shortening of the time required to get the money into the hands of injured men after their claims have been filed. For their low costs of administration, which averages less than 5 per cent. of the money handled, and for their speed in handling claims, Canadian boards have recently been highly complimented by the investigator of the department of statistics of the bureau of labor, Washington, D.C., who has made an extensive comparative examination of the work of all such boards.

## Cost Only Five Per Cent.

In view of the magnitude of the business handled by the boards, amounting in Canada to over eight millions of dollars annually, it is worthy of special note that of every hundred dollars paid by the employer over ninety-five dollars is used directly for the purposes of the very many thousands of men who have been injured, and to secure payment of the pensions due the dependents of those who have been killed, without deduction of any commission or profits or charges of any kind whatever.

During the year the application of the act has been enlarged, particularly in Alberta, by legislative enactment, to include railways, and in British Columbia, by regulation of the board, to include all deliveries from retail stores, and the list of industrial diseases within its application have been slightly extended.

## Scale of Benefits Increased

The scale of benefits has been materially increased in Ontario, compensation having been raised from 55 per cent. to 66½ per cent., and on July 1st pensions to dependent widows were increased to \$40 per month and to children \$10 per month, which are double the pensions provided originally in the act. The increase in pensions was made to apply from July 1st to all such dependents then entitled to pensions as well as to cases arising after that date.

Pensions to orphan children were raised to \$15, as compared with the pension of \$10 originally provided, and funeral expenses were authorized to be paid up to \$125, instead of \$75, which was rarely found to be sufficient.

It is to be hoped that an earnest effort on the part of employers to co-operate with the board in the effort to prevent accidents through the work of the accident prevention associations and the safety-first committees and first-aid work in the individual plants, will so reduce the number of accidents and prevent their serious development, that the increased benefits will not result in any material increase in the rates of assessments.

In Manitoba the act has hitherto provided for individual liability of employers, against which they were required to deposit with the board policies issued by some insurance company, or to give other satisfactory guarantees. Under this method the rates of insurance were found to be very high as compared with the rates charged in provinces where the work is conducted exclusively by boards appointed for the purpose, and in other respects the law was found to be so unsatisfactory that, at the request of both the employers and the workmen, an examination and report was made by experts appointed by the government. It was found that the difference between the amounts paid by employers to the insurance companies and the amount the companies actually paid injured men would have been more than sufficient, had the waste been avoided, to have raised the rate of compensation from 55 per cent. to 66½ per cent., and to have paid dependent widows \$35 per month instead of \$20.

The report recommended that the law be amended so that the intervention of insurance companies be avoided and that all matters relating to the work be exclusively handled by the board, thus enabling the rate of compensation to injured men and their dependents to be raised. A new act was accordingly passed, becoming effective on the 1st of January, 1921, providing for compensation at 66½ per cent. of the wage, with pension to dependent widows of \$30 per month, and \$7.50 to children, except that orphans will receive \$15 per month. Funeral expenses may be paid up to \$100. The law, on the whole, conforms very closely to the act in force in British Columbia, which is very similar to the acts in Ontario, Nova Scotia and New Brunswick.

## Employing the Disabled

The rehabilitation of workmen who have sustained serious permanent impairments is a work which claims the most careful attention of every board administering compensation acts. As under the laws of most of the provinces awards are now paid without the necessity of suits at law or any appeal to the courts, which in the past have been productive of much mutual friction and ill-will between employers and their workmen, a most gratifying result has followed in the general willingness of employers whose men have met with serious permanent impairments to find employment for them suitable in view of their disabilities.

So generally are employers willing to re-employ their crippled workmen, especially in the case of large employers and where the workmen have previously been employed for a considerable time, that the chief difficulties of the problem are confined to cases where the men have been injured while working for small employers or in incidental labor. In such cases it has been found wise to commute a small portion of the monthly pension due and pay the workmen a few hundred dollars and a pension either for life or a larger pension for a limited term and advise the injured man that if at a later time he should find it advisable and safe to engage in some small business or occupation with which he was familiar the board would help him to undertake the work by commuting a further portion of his pension. It has been found that often after a number of months a wise choice of occupation has been made, sometimes on a small acreage or in a business enterprise, and crippled men so assisted have in a very considerable number of cases been established in profitable undertakings. In a number of cases where very young men have been crippled courses of instruction have been arranged so that they have been able to undertake work where their physical disabilities were not so great a handicap. The success of this work has afforded the greatest satisfaction.

## ASSURANCE COMPANY

Head Office: WINNIPEG

The year 1920 was one of substantial progress. The Company wrote more Insurance and collected more premiums and interest than in any previous year.

There are a number of good districts available for men who can produce business.

WM. SMITH,  
President and Managing Director.

F. C. O'BRIEN,  
Secretary-Treasurer.

The general method of determining and paying compensation due on account of permanent partial disabilities in one of the Canadian boards was referred to in the report of the special investigator of the labor bureau in Washington in the following complimentary terms:—

"The British Columbia plan is probably the most nearly adequate and the nearest approach to a scientific system of compensating permanent partial disability yet developed in America."

At the first annual meeting of the Association of Canadian Workmen's Compensation Boards, which was held in Toronto early in October, the various problems arising from the work of the several boards was discussed and consideration given to the possibility of arranging, if possible, for a greater degree of uniformity in compensation acts throughout the Dominion.

## RIOT, STRIKE, CIVIL COMMOTION AND EXPLOSION

These Lines Now Established in Canada— Changing Economic Conditions Keep Up Demand for Protection

BY J. E. PROCTOR  
*Jones and Proctor Bros., Toronto*

UNTIL 1918 this class of insurance received very little consideration from the insuring public in Canada with the few exceptions of such manufacturing plants that, through their process, were exposed to the risk of explosion. Such institutions purchased straight explosion insurance, excluding the risks of riot, strike and civil commotion. Up to 1918 the greater volume of this insurance was placed in England with Lloyd's Underwriters. About that time the stock companies in the United States and Canada undertook to issue policies covering these risks and about the same time the undercurrent of unrest became apparent to close observers.

However, the unrest in labor circles came very much to the surface the first few months of 1919 and property owners protected their interests against loss arising from this source. The situation in Winnipeg, Toronto and Montreal was more acute than elsewhere, with the banner perhaps going to Winnipeg. Some of the insurance taken out in 1919 has been cancelled or allowed to lapse, but there is a considerable number of property owners who consider it advisable to carry this protection until conditions reach a normal basis. The reasons for taking out this insurance in 1919 are practically the reverse of to-day. In 1919 the unrest was caused by demand for greater earnings by the labor people, aided and abetted by the socialistic element, who hoped to strengthen the position with labor. To-day the unrest, if any, is caused by unemployment and receding wages, which will be aggravated by coming winter conditions.

### Not Covered by Fire Policy

The protection afforded by this form of policy is specifically excluded from fire insurance policies by the statutory conditions. Any loss, therefore, resulting from riot, strike, civil commotion and explosion which would include loss by fire caused indirectly or directly by such causes would not be covered under straight fire insurance policies. Prudent property owners who did not desire to be left in the position of having their property wiped out or seriously damaged by such an event should it come to pass, and unable to collect under their fire insurance policies consequently purchased this protection.

The rates have never been considered high and to-day are lower than in 1919. It must be taken into consideration that this form of insurance cannot be accepted as of a permanent nature, and in compiling rates underwriters naturally have to take this into account.

The demand for this class of insurance in the United States is much greater than in Canada, property owners there considering it practically as important as fire insurance under present uncertain conditions.

It might be as well in passing to deal shortly with the situation in regard to marine insurance. Remarks so far

have dealt with insuring fixed properties which are only exposed to such disturbances as arise in the locality in which the property is located. Riot, strike, civil commotion and explosion insurance when applied to marine insurance presents a much different aspect. The moment a consignor delivers merchandise to the carrier such merchandise goes out of the control of the consignor and from then until delivered to a final destination such merchandise is exposed to risks in all situations and in all countries to and from which the merchandise passes. Such risks are specifically excluded from the marine insurance contracts insuring cargoes and hulls unless specially arranged otherwise. A number of importers and exporters in Canada have their marine insurance arranged to include these risks. Importers and exporters should give this question earnest consideration, because knowledge of disturbances in foreign countries comes too late to arrange protection on shipments that have already left the hands of the consignor. It is impossible also for a consignee or consignor to ascertain at what point his merchandise is and consequently cannot determine if such is subject to any unusual hazard should disturbances occur. Additional rates to include this risk under marine insurance are at present low, but of course vary from time to time, depending on conditions.

It is pointed out that practically all policies covering various risks contain a riot, strike and civil commotion clause excluding liability of the insurance company for loss or damage resulting from such clauses.

## WEEKLY PREMIUM BUSINESS IMPROVES

Advance of About 50 Per Cent. Compared With 1919—The Industrial Depression and Its Effects

BY J. F. MAINE,  
*Supervisor, Industrial Agencies, London Life Insurance Company*

THE question is being asked, "What effect is the labor unrest and industrial depressions having on the weekly premium life insurance business?"

We might say history is repeating itself. In the '90's when industrial conditions in Canada were at their worst, the weekly premium life insurance companies did the largest volume of weekly premium business that had been done up to that time.

### Means of Systematic Saving

Since that time the companies have so improved the privileges and benefits in their weekly premium policy contracts that people of all classes are buying them. Some purchase the weekly premium endowment policy for the facilities it affords for systematic saving. It is in a sense compulsory saving, thus contributing largely to forcing people, young people in particular, to form the habit of saving. This policy is not a pure endowment but a life and endowment combined. It contains many of the privileges of the policies on the ordinary plans such as cash surrender, loan, paid-up values, etc.

### Feel Need of Insurance

When work is scarce and money tight, the masses of the people value a small policy more than they do when wages are high and money plentiful, with the result that an efficient life insurance salesman can do more business now than he could during the years of plenty. Herein the history of the '90's is being repeated. During this year our weekly premium business has been about 50 per cent. in advance of the same period last year. We are of the opinion that the weekly premium life insurance is at least one business that improves with industrial depression.

Apple shipments from Halifax have been very heavy. The shipments up to November 14 totalled 320,000 barrels, principally for the United Kingdom, as against 432,000 barrels for the whole of last season.

# Automobile Insurance Developments in Canada

Tariff Association Effected Important Changes in Rates and in Methods of Rating—Competition of Non-Tariff Company a Factor—Great Field For Increase in Volume of Business

By FREDERICK WILLIAMS

Manager for Canada, Motor Union Insurance Company, Ltd.

THE year 1920 has been somewhat notable in the automobile insurance business. So far as Canada is concerned it is generally recognized that the field offers considerable possibilities and that only the fringe of the ground has so far been touched, while the methods in vogue for developing this interesting class of business have not been by any means ideal for securing the most satisfactory results.

The large majority of the companies transacting automobile insurance have operated through the medium of a tariff organization known as the Canadian Automobile Underwriters' Association, the idea being, of course, to stabilize rates of premiums and general conditions of working. 1920 was really the first year in which united action was secured in combining the so-called automobile "fire" and automobile "casualty" tariff associations into one body; although there has continued to be a definite distinction between the two sections, and there has also been a failure to secure identical methods of working throughout the Dominion, local associations in certain parts being anxious to preserve their individuality and to some extent follow their own independent judgment.

## Rates Were Changed

In the early part of 1920 a new rate book was published by the tariff combining the fire and casualty sections of the automobile business, and in other respects aiming at greater simplicity. The rates in general were a considerable increase over those in force in the latter part of 1919, although in certain directions reductions were made. The attempt to stiffen the rates was, however, not an unqualified success, and in an effort to preserve harmony amongst the members drastic reductions in the Ontario and Quebec rates were made in the spring, partly, it may be observed, to endeavor to beat the independent competition of the "Motor Union" an influence that company to join the association.

The attitude of the motor union was that the methods of operation of the tariff were not the most satisfactory, whether regarded from the point of view of the company, the agent, or the insuring public; and until reasonable changes were made the Motor Union preferred to keep outside the association. With a view to getting things on a mutually acceptable footing if possible the Tariff Association took the rather unusual but very commendable course of inviting me to attend their annual meeting in Ottawa, to express my general opinions.

## American Companies Restricted

One of the admitted handicaps of the tariff organization is that so much has to be done as a concession to the limited powers of American companies, who form a considerable part of the association and who are restricted by arbitrary laws in the United States. Canadian and British companies are not hampered by these illogical and unnecessary laws and are consequently free to operate on much more advanced lines. The strength of a chain is always that of its weakest link, and seeing that the association has had in the past and always will have in the future to contend with competition on more or less aggressive and independent lines, it seems a pity that the companies which have the ability to cope with that competition should content themselves with dropping back to a lower level and marching at the same sluggish pace as the companies which are operating with shackles around their ankles.

It might also be mentioned that there has been too much of a tendency to lean on the views of the American bureaus, on the experience of the American companies, on the recommendations of American insurance men. Canada is more than big enough to stand on its own feet so far as conducting the business of insurance is concerned, and the Canadian field will

be developed more vigorously and more satisfactorily, not merely as regards automobile insurance, but in other branches, when the Canadian managers treat Canada as Canada, not simply copying America or Great Britain or any other country, but exercising intelligent initiative; ready to learn from any other country, ready to co-operate with any other insurance association, but also able and willing to give other countries and other associations a lead when occasion arises.

## Possibilities of Business

Facts and figures are not as a rule very interesting reading, but as showing the potentialities of the automobile insurance business in Canada it may be worth making brief reference to one or two points. The records show that in 1903 the total number of automobiles registered in Canada was 220. Ten years later (1913) the total had increased to 50,489. The next five years brought the total (1918) up to no less than 269,727, while in 1919 the total number of cars and trucks amounted to 355,433. The 1920 figures will doubtless show a substantial increase on this last-mentioned total.

The amount of business transacted by the companies reporting to the Dominion insurance department may also be touched upon. In 1910 the total premiums amounted to \$80,446. In 1915 the total had grown to \$573,604. In 1919 the total had increased to \$3,425,983. Bearing in mind the number of companies who have entered the field in the last few years and having regard to the tendency towards more comprehensive coverage and broader limits of indemnity, it can readily be seen that while it would appear that the business has gone ahead at a great pace, the companies have in reality done little if anything more than maintain a certain relationship with the increase in the number of vehicles owned.

## Many Owners Not Insured

\$3,425,983 premiums on 255,433 automobiles indicates that a very large number of automobile owners are either carrying no insurance at all or are content with partial inadequate coverage. With a serious effort to get automobile owners to carry adequate protection the total premiums secured could be increased substantially, and with the normal increase in the number of vehicles owned this department of insurance should in the future show very much larger figures than those so far reported.

It might be of interest to mention that out of the total of \$3,425,983, Canadian companies wrote \$1,110,237; British companies wrote \$1,517,411, and American companies wrote \$798,335. Some of the American companies are, of course, controlled by British companies, so that the total share actually secured by British and Canadian interests is far in excess of the proportion written and retained by purely American concerns. The limitations under which the American companies operate explain in part their lack of success in this field, and in any case it is natural and desirable that Canadians should support Canadian and British institutions.

## Some Comments on Blue-Book Figures

In considering the Blue-Book tables from which our premium figures are taken it must be appreciated that on a rapidly increasing premium income such as is shown the "unearned premium" factor is a very important item, and unless due allowance is made for the necessary reserve for unexpired risks the casual reader is apt to form the opinion that there is a considerably larger margin of profit on automobile insurance than is really the case.

The "claims" tables show totals of \$1,565,408 paid and \$561,809 outstanding, an aggregate of \$2,127,217; but it appears that the claims actually relating to the 1919 business

## A Splendid Opportunity.

The Dominion Insurance Department was never more efficiently and more drastically administered than under G. D. Finlayson. Young companies complying in every particular with the Insurance Act are in an unquestionable financial position, and are much stronger than other companies were at the same period of their age.

According to the report of the Dominion Superintendent of Insurance (The Blue Book), for the year ending 1919, the assets of The Commercial Life Assurance Company of Canada are \$316 to \$100 of liabilities, while the assets of all other Canadian companies averaged are \$116 to \$100 of liabilities.

The remunerative positions of influence with this Company are not already mortgaged in advance and are available to reliable and progressive men associating themselves with the Company to-day. Inquire.

Head Office - EDMONTON, CANADA

# “Business Insurance”

is one of the most significant developments of modern protection. Large firms are increasingly disposed to protect themselves against loss caused by the death of important members.

These large risks are placed with the utmost care. No weak feature could pass muster. The fact that The Great-West Life so frequently secures this type of business is a high endorsement in itself.

Ask for rates and printed matter.

## The Great-West Life Assurance Company

(Dept. “F.”)

HEAD OFFICE, WINNIPEG

totalled \$1,806,917. Bearing in mind the necessary increase in the reserves for unexpired risks, it appears fairly obvious that, taken as a whole, the companies are making very little, if any, actual profit on this business. This point of reserves for unexpired risks in the automobile business does not appear to be tabulated in the Blue Book in the same carefully-presented way as is done for general fire insurance.

As regards the claims paid it may be worth noting that the Canadian companies reported a total of \$493,087; the British companies paid \$684,047; while the American companies paid \$388,274. As compared with the premiums written it will be seen that, taken as a whole, the British companies appear to have the most favorable results.

The figures quoted are for companies operating under Dominion licenses. A certain amount of business is also done by companies operating solely under provincial licenses, but the figures are of small amount.

#### New Bases for Rating

The year 1920 will remain on record in Canada as the period in which various interesting changes were made in the general practice. In place of the rating of the third-party risks according to horse-power, the tariff companies changed over to the method of the "Motor Union" and instituted a schedule based on the list price. This is not a scientific basis, but there are certain arguments in its favor pending the settlement of an accurate and logical system. There are so many factors entering into the problem, however, that it is very doubtful if all points can be taken care of by a simple straightforward schedule.

The tariff also adopted a new rating system for fire and theft risks, this being based on the views of the American bureaus. Under the new schedule cars are specifically classified and rated on a "merit" system. This is a considerable improvement on the "list-price" basis previously in force, which gave very illogical results.

The "valued" form of fire policy also came under consideration at the latter end of the year, and it is understood that it has been decided to abandon this form of policy, to which certain legitimate objections can be raised. It is a survival of the practice of the marine underwriters who entered the automobile field in the early days and rather unwisely applied marine methods to the new branch, where the same conditions obviously do not apply. Reference might incidentally be made to the point that prior to the decision to abandon the valued form the practice was to charge a flat additional 25 cents per cent. on the insured value for the "valued" covering. No matter whether the basis rate was 50 cents, \$1.00, \$2.00, \$3.00 or \$4.00, etc., the additional charge was 25 cents. In other words, the more hazardous the risks the less the proportionate additional, which was obviously illogical.

#### Routing About Fire Damage

During the year the question came up for consideration of the liability under the property damage heading (third-party risk) in the case of fire arising out of damage caused to other people's property by the insured automobile. The Dominion department of insurance (Ottawa) communicated its opinion that such a hazard came within the scope of ordinary fire insurance, with the consequence that a company not licensed to transact general fire business "cannot undertake liability for such loss by fire arising from an accident." It is very respectfully submitted that this ruling will not bear strict scrutiny—that is, regarding the matter purely from the point of view of general insurance practice. A company not licensed to transact general fire business can very properly be barred from writing fire insurance on specific property; e. g., it could be prohibited from covering the fire risk on the insured automobile. But when the company is licensed to issue contracts of indemnity against third-party risks (i. e., claims by the public), it ought to be free to give the widest possible indemnity. It would prima facie be absurd to suggest that companies licensed for liability insurance be prohibited from covering personal injuries to the public arising out of fire or explosion; and yet it is just as illogical to say that such companies must restrict their liability for damage caused to the property of third parties by excluding possible damage to such general

and unspecified property caused by fire arising out of the original accident. Possibly the anomaly and slight inconvenience caused by the ruling in question will be remedied when further consideration has been given to the matter.

#### FIRE PREVENTION WORK IN ONTARIO

Province a Leader in This Work—Results as Shown by Fire Losses and Insurance Carried

By E. P. HEATON, Ontario Fire Marshal

WE are, we think, justified in saying that Ontario has taken a rather more advanced position in the matter of fire prevention than any other Canadian province, and indeed some of our United States friends have been good enough to say that we have set the pace for the whole continent. Be that as it may, it is true that the active propaganda started by the Ontario Fire Prevention League in 1919, as particularized in *The Monetary Times Annual* for 1920 (p. 200), has been carried on during the year 1920 much more intensively and with good success.

After mature consideration we came to the conclusion that our work for 1920 could not follow any better lines of propaganda than was adopted in 1919. We thought then we were working to the best advantage with the money at our disposal, and having been able to materially increase our appropriation we have simply followed the old lines in an intensified degree and, we believe, with correspondingly happy results.

The hope of the future unquestionably is in the development of "carefulness" in the consciousness of the rising generation and we have therefore endeavored during the year to get in touch with Boy Scouts, Girl Guides, pupils of all grades of schools, and the home. The pamphlets issued and circulated have numbered more than half a million, and perhaps the most effective work has resulted from the distribution of 2,000 medals for prize essays. Correspondence from all over the province indicates that the preparation of essays has been general, that "home" discussions have preceded and followed their preparation, and that in this way thought has been aroused and influences brought to bear which must have an abiding and far-reaching effect.

We are still seeking to develop municipal action in respect of fire prevention. Last year I indicated a number of cities in which the fire department organizations had rendered active co-operation; in all the places then named the work has continued with very commendable zeal and activity, and this year the outstanding gratifying feature is the remarkable way in which the smaller towns and villages have risen to the occasion—and particularly where, as in many instances I could recite, the whole work has been performed by and under the activity of volunteers.

#### Does it Pay?

In spite of the phenomenal increase in buildings and of the tremendous rise in values at risk all over the province, the first ten months' fire record in Ontario compared with the corresponding period of 1919 (the most favorable year Ontario ever had) is evidence enough that some influence for good is at work. The record is as follows:—

	1919	1920
Number of fires --	7,823	7,812
Aggregate loss ---	\$8,777,730	\$9,269,046
Insurance loss ----	5,768,707	6,647,019
Uninsured loss ----	3,009,023	2,622,027

No one can control the spread of a fire, and at any moment one may occur of such magnitude as to beggar all comparison in respect to the aggregate loss, nevertheless the number of fires occurring is more or less controllable, and the commendable feature of this return is found in the first item. Happily the second and third items are also such as to call forth a measure of thankfulness and hope that 1920 may also rank as a favorable year.

I do not want in this brief article to go into detail, but I would like to refer those interested to an article written for the November number of "The Contract Record" for a more specific answer to the question, "Does it Pay?"

# Fire Insurance Cases Reach Highest Courts

Quebec Light, Heat and Power Appeal Decided By Privy Council—Insurance Company Not Liable When Property Transferred, Contrary to Statutory Provisions.

AMONG the numerous cases on fire insurance which have reached the higher courts in this country during the past year, the most important is that relating to the Quebec Light, Heat and Power Company. This was decided by the Privy Council to the effect that if fire insurance companies advise improvements for purposes of safety and fire prevention, it is the duty of electric power supplying companies to instal these suggested improvements.

## Quebec Light and Power Case

The case originally began in 1912, when after numerous fires in Quebec City, the insurance companies interested appointed an investigator, who found that many of the fires were caused by improper conducting apparatus, and who recommended that conditions be improved by grounding all transformers at their neutral point, which promised to be the only remedy available to the operating company. Until the fire in the present case, no steps were taken by the operating company to follow the advice given.

In the present case the judge of the Superior Court of Quebec found the Quebec Light, Heat and Power Company responsible and they were ordered to pay \$60,000, plus interest and costs. This decision was appealed to the Court of King's Bench and the Quebec Light, Heat and Power Company was found not responsible. The insurance company then appealed to the Supreme Court of Canada, which reaffirmed the decision of the Superior Court, and the Quebec Light, Heat and Power Company was again found responsible for the fires by a majority of one.

But permission was given to the respondents (the Quebec Company) to appeal to the Privy Council, which decided that the Quebec Light, Heat and Power Company was responsible for the fires in that it had not attempted to relieve itself of responsibility by following the advice of the insurance companies.

## Privy Council's Decision

The facts of the case and the pertinent parts of their Lordships' decision are as follows:—

"The appellant company generates and distributes electricity in the City of Quebec and its neighborhood and along the St. Toye Road the company had erected poles carrying two overhead cables, a primary cable charged with electricity at 2200 volts, and a secondary cable from which electricity was supplied to the houses at 108 volts. There were many trees along the roadside and in the adjacent enclosures, and at the time in question a violent wind had torn a branch coated with frozen rain from a poplar growing some distance from one of the enclosures and had driven it against these cables, though many feet away. They broke down in consequence and thus the high-tension electricity found its way along the secondary cable into the customers' houses and set them on fire. For the loss thus caused the present action was brought against the appellant company.

"The powers under which the appellant company carries on its undertaking are statutory and are contained some in private and some in public statutes. The powers which these statutes give are of a very familiar type. The undertakers are authorized to carry and distribute high-tension electricity over cables which may be either overhead or underground, and one section expressly provides that the company may erect, equip and maintain poles in the streets for the purpose of working and maintaining its lines for the conveyance of electric power, upon, along, across, over and under the same. It was contended by the respondents (the insurance companies) that subsection (e) of this section, by the words 'the company shall be responsible for all damage which its agents, servants or workmen cause to individuals or property in carrying out or maintaining any of its said works,' made the company absolutely liable for the damage sued for in the

present case. Their Lordships think that, as an independent cause of action, this case fails. The damage here is not, in any view of the construction of the subsection, caused in carrying out or maintaining works.

## Company's Rights Not Absolute

"The appellants, however, rely on the authority to carry their wires overhead which the statutes give. The application of enactments of this kind is familiar and well settled. Such powers are not in themselves charters to commit torts and to damage third persons at large, but that which is necessarily incidental to the exercise of the statutory authority is held to have been authorized by implication and therefore it is not the foundation of a cause of action in favour of strangers, since otherwise the application of the general law would defeat the purpose of the enactment. The legislature, which could have excepted the application of the general law in express terms, must be deemed to have done so by implication in such cases. Nor need a use of the power conferred, which is injurious to others, be excluded from the ambit of that which is necessarily incidental to their enjoyment merely because the progress of discovery or invention reveals some extraordinary means of preventing that injury to others which has previously been unavoidable. This point arose and was settled in connection with sparks falling from locomotive engines many years ago. It therefore becomes necessary to consider how far such an escape of electricity as took place in this case was incidental to the use of overhead cables and how far and by what reasonable precautions injurious consequences were preventable.

## The Transmission Lines

"The question whether it was necessary to hang the two sets of cables on the same poles or in such proximity to one another that the fall of the branch upon one would lead to the flow of the high-tension current into the other, hardly seems to have been examined at the trial. The main contention is this: That if the wires of the transformers, which are used at intervals along the line of cable, had been grounded, the escaping high-tension electricity would have found its way innocuously to earth instead of entering the houses and setting them on fire. The value of this precaution has been established by the experience of several years, but it was the view of some distributors of electricity and of the defendant company among them, that there was an offset to this advantage in the fact that, if the wiring of the customers' houses was defective, the grounding of the transformer wires would substitute new difficulties for the old. It was not, however, shown that the wiring of the plaintiffs' houses was defective to this extent, although it was 'demode,' nor did the evidence compare the one disadvantage with the other quantitatively. The company could have inspected the wiring and, if it was not safe, could have declined to supply current. It is plain that the company was quite willing to have carried out the grounding of the transformer wires, if the representative of the fire insurance companies, who advised this course, had given an instruction instead of a recommendation. The latter naturally pointed out that they had no authority to issue instructions, but must confine themselves to advice, and as their Lordships are neither prepared to assume that this request on appellants' part for instructions was a mere quibble, designed to disguise their own reluctance to do anything, nor even to infer that they saw any objection to the proposal except the expense of it, they conclude that the grounding of the wires of the transformers would, some substantial time before the accident in question, have been a practicable and efficient safeguard against the injury which in fact was inflicted. If so, it is impossible to say that the escape of electricity into customers' houses and the consequent damage in time of

# Our National Status

The growth of the Manufacturers Life Insurance Company has been commensurate with the expansion of this great country of ours.

The Annual Report for the Year 1920—the Thirty-Fourth Annual Report of the Company—will not only show another banner year for new business, but will also show a greater production than the total business written by all Canadian Companies two decades ago.

That we stand high in the estimation of the insuring public is indicated by our record. Such progress would not have been possible had we not rendered service to an ever-growing body of Policyholders. "Once a Policyholder, always a Policyholder," is our motto, and three generations of Canadians are to-day carrying their insurance with The Manufacturers Life. Our Policies are as liberal as is compatible with safety. Full particulars of our Guaranteed Plans gladly furnished.

storm was a necessary incident of the exercise of the power to distribute high-tension current by overhead cables along roads, such as would by implication relieve the company from liability for the consequences."

"Their Lordships will humbly advise His Majesty that this appeal should be dismissed with costs."

#### Staddon vs. Liverpool-Manitoba Assurance Co.

Another case of interest to fire insurance companies was that of *Staddon vs. Liverpool-Manitoba Assurance Company*, in which the Supreme Court of Ontario decided that a fire insurance company was not liable under a policy on property which had been transferred without its consent, where such assent is required by the statutory conditions. The facts were that the company insured John Griffin for three years to the amount of \$800 against loss or damage by fire on a frame dwelling belonging to Griffin. After the issue of the policy, Griffin sold and conveyed the lands and building to a realty company, which reconveyed the same by mortgage to Griffin to secure payment of \$850, part of the purchase price. Thereafter the realty company sold and conveyed its equity of redemption in the lands to one Sova, who later sold and conveyed the same to one Pulford. To none of these conveyances did the company give its written permission. Some time later Griffin assigned to Pulford, the then owner of the equity of redemption, the policy of insurance and all benefits thereunder by an assignment in writing endorsed on the policy, and beneath this assignment the company by its agent consented to such assignment by an endorsement on the policy. Subsequently Pulford conveyed the lands subject to Griffin's mortgage, to Thomas and W. Affleck, and they conveyed the same to Staddon, the plaintiff. The written consent of the insurance company was not given to either of the two last-mentioned conveyances.

During the year the building was totally destroyed by fire and the company refused payment of the loss, on the third statutory condition, which is: "If the property insured is assigned without a written permission endorsed thereon by an agent of the company duly authorized for such purpose, the policy shall thereby become void; but this condition does not apply to change of title by succession or by operation of the law or by reason of death."

#### Insurance Company Not Liable

His Lordship, in deciding that the insurance company was not liable under the policy, said in part:—

"It is unnecessary to determine whether, in view of the consent given by the company to the assignment of the policy by Griffin to Pulford, the company's liability ceased upon the conveyance of the assured premises by Griffin to the Caskey-Kamer Realty Co. But for the subsequent assignment of the policy and the consent thereto of the company, the conveyance of the insured premises to the Caskey-Kamer Realty Co. terminated the insurance contract created by the policy. The view most favorable to the plaintiff is that the effect of the subsequent assignment of the policy and the company's consent thereto was to create an insurance contract with Pulford as the assured, with loss payable to Griffin as his interest might appear.

"With this as a starting point, the question is: What was the effect of the subsequent conveyance of the lands by Pulford to Thomas and W. Affleck subject to the mortgage to Griffin? By this conveyance Pulford denuded himself of all interest in the insured building. The company's contract was to the effect that the assured, to the extent of \$800, should suffer no loss or damage; that is, the company would indemnify him in respect of loss or damage by fire to his building to the extent of \$800. Having prior to the fire parted with all interest in the building, he suffered no loss or damage by its destruction, and therefore has no claim for indemnity; and is not entitled to maintain this action. Nor does the plaintiff stand in any better position than the assured. By the terms of the company's assent to the assignment of the policy to Pulford, with loss payable to Griffin, the latter became entitled simply to intercept for his own benefit moneys otherwise recoverable by Pulford; and, inasmuch as Pulford, having sustained no loss, cannot recover, neither can Griffin,

whose title is derived from Pulford, nor can the plaintiff, whose title is derived from Griffin. For these reasons, I think this appeal should be dismissed with costs."

#### Fire Insurance Company's Claim Upheld

A case of great interest to fire insurance companies has recently been decided by the Privy Council. The case was that of *Curtiss & Harvey, Ltd., vs. North British Mercantile Insurance Co., Ltd.*, which arose as the outcome of the explosion which wrecked the company claimant's plant near Rigaud on August 18, 1917, and as twenty-six other insurance companies are affected the decision is obviously of wide importance. The facts of the case are:—

The appellants are manufacturers of explosives and are the owners of works in which such explosives are made, and in particular they were engaged in the manufacture of trinitro-toluol. They wished to insure their works against fire, and through their brokers they sent to the respondents, the North British and Mercantile Insurance Co., a slip on which was typewritten their requirements for insurance. These consisted of a specification of the various buildings they wished to be insured, with the addition of terms on which they wished the insurance to be granted. Upon this the respondents issued a policy. On the back of the form are the printed statutory conditions which, according to the law of Quebec, must be printed on every policy.

A fire took place in one of the buildings insured in which there was a nitratol, which was a machine employed in one of the stores for the manufacture of T.N.T. The fire extended to an adjoining building in which there was some T.N.T. Ten minutes afterwards an explosion occurred, and in the end practically the whole of the insured buildings were—whether by explosion or fire—totally destroyed.

The appellants sue upon the policy for the whole amount. The respondents admit their liability for damage by fire, but contend that they are not liable for damage attributable to explosion, and aver that the greater part of the damage was in fact so caused.

The chief question arose in respect of the interpretation and more particularly the applicability of statutory condition No. 11 of R.S.Q. 1909, art. 7034, "(11) The company shall make good loss caused by the explosion of gas in a building not forming part of the gasworks, and all other loss caused by any explosion causing a fire and all loss caused by lightning, even if it does not set fire," to a warranty in the policy in the following terms, "Warranted free of claim for loss or damage caused by explosion of any of the material used on the premises."

In brief, their lordships decided that statutory condition No. 11 of art. 7034, R.S.Q. 1909, only deals with the case of an explosion originating a fire and not with an explosion incidental to a fire, and where loss is caused partly by fire and partly by explosion a policy expressed to be against fire, and containing the following clause, "Warranted free of claim for loss or damages caused by explosion of any of the material used on the premises," the clause being properly authenticated as required by article 7036 of the statutes, should be given effect to, and an enquiry directed to enquire into the question of what damages are due respectively to fire and explosion.

#### FIRE INVESTIGATIONS IN MANITOBA

Pyromaniacs are exacting an annual toll of thousands of dollars from property owners in Manitoba, according to Alexander Inch, Deputy Provincial Fire Commissioner. During the first eight months of 1920 reports were received of 150 suspicious fires in Manitoba, with more than 40 of these fires established as being of incendiary origin. The loss through incendiary and suspicious fires had already amounted to \$327,880, the commissioner stated, and not one individual has been brought to justice.

Lack of machinery to carry out proper investigations encourages firebugs, and Commissioner Inch will recommend that the Fire Prevention Branch be placed under the Law Enforcement Department.

# Recent Changes in Life Insurance Legislation

Summary of Provincial Legislation of the Past Three Years—British Columbia Amends Law Regarding Minors—Beneficiary Law in Manitoba—Other Amendments—Important Changes in Taxation of Life Insurance

By WILLIAM B. TAYLOR, B.A., LL.B.

Secretary, North American Life Assurance Company, Toronto

**T**HERE has been some new provincial legislation during the past three years in some of the provinces of Canada which affects life insurance contracts, and it is the object of this article to refer to some of these amendments as affecting more generally the interest of the insured and the beneficiary. The matter has been referred to under the heading of each province and the changes do not require any comment. There is also a reference made to taxation in the different provinces as now imposed upon life insurance companies, and the amount of the tax and the legislative basis for the same is given under each province.

## Alberta

Service in connection with any suit or proceeding is now to be made upon an attorney resident in the province duly appointed by the company, in addition to any other mode of valid service upon the company.

## British Columbia

An amendment was made April 23rd, 1918, permitting payment of the share of infants in a life policy to the guardian of the infants within the meaning of the "Equal Guardianship of Infants Act," or to the executors of the last will and testament of the insured or to a guardian of the infants duly appointed by the Supreme Court or by the County Court or to a trustee appointed by the court upon the application of the wife or of the infants or their guardian, and said payments shall be a good discharge to the company.

A minor over the age of 16 years may effect insurance now like an adult and no insurance effected by a parent on the life of his child shall be invalid by reason only of the want of pecuniary interest in the child's life. No insurance is to be effected on a child's life until it is at least one year old. Where the insurance is effected on the life of a child under ten years of age the insurance moneys payable at the maturity of the policy shall not exceed the following amounts:—

\$32.00 if under 2 years	\$83.00 if under 6 years
\$40.00 if under 3 years	\$120.00 if under 7 years
\$48.00 if under 4 years	\$160.00 if under 8 years
\$56.00 if under 5 years	\$200.00 if under 9 years
\$260.00 if under 10 years	

If a company enters into a contract on the life of a child under 10 years of age and the insurance money payable thereunder exceeds the amount fixed as above, the premiums paid may be recovered from the insurer by the person making the payments, together with compound interest at 7 per cent. per annum. The above restrictions do not apply in a case where there is a pecuniary interest in the life of a child or where the amount payable on death is limited to the premiums paid with interest. A provision also is made that these restrictions in regard to child insurance must be printed in conspicuous type on every contract, circular, application, etc., otherwise a penalty of \$200.00 is imposed.

## Manitoba

On March 6, 1918, the act was amended releasing the company who had bona fide made a payment of insurance funds to the person who would appear to be entitled to the payment where actual notice on the part of the company that the assured had revoked the benefit or interest of such person had not been received by the company.

On March 27, 1920, there was an amendment which changed the privilege of the insured in this province to revoke the interest of any beneficiary, which power existed before this amendment. The power of revocation of the insured in Manitoba does not now extend in any case where a policy

effected on the life of a man or woman is for the benefit of his wife or her husband or his wife and children or her husband and children or his or her children or any of them. Such class therefore constitutes the class of preferred beneficiaries and the retroactive power has been revoked in regard to this new class. This amendment is retroactive and affects all contracts, but not payments which have been made by companies in accordance with revocations made before the date of this amendment.

## Saskatchewan

On the 1st of May, 1919, an amendment was made enacting that if a company disputes a claim it shall give notice in writing to the claimant and to the superintendent of insurance within sixty days.

No contract of insurance shall be issued or delivered in this province by an insurance company until a copy of the form of contract has been mailed to and approved by the superintendent.

Every company licensed under the act must stamp upon its policy and interim receipt the words, "Licensed under the Saskatchewan Insurance Act."

Quebec—No legislation.

New Brunswick—No legislation.

## Nova Scotia

Under the Probate Act as amended in 1918 a duplicate of any probate or letters of administration or a copy of exemption thereof under the seal of the court granting the same shall have the same effect as the original.

By an amendment passed on the 26th of April, 1916, it is provided that if one or more of the designated or ascertained preferred beneficiaries, whether an appointment has been made or not, die in the lifetime of the assured, the assured may by an instrument in writing attached to or endorsed on or referring to and identifying the policy of insurance by number or otherwise, declare that the share or shares of the person or persons so dying shall be for the benefit of the assured or his estate or person or persons named or ascertained by him in that behalf, whether or not the person or persons so named or ascertained belong to the preferred class of beneficiaries; and in default of any such declaration the share or shares of the person or persons so dying shall be for the benefit of the survivors (in equal shares) of the said designated or ascertained preferred beneficiaries; or if there is no such survivor the insurance shall be for the benefit in equal shares of the children of the assured, and if no surviving children of the assured, then the insurance shall form part of the estate of the assured.

Prince Edward Island—No legislation.

## Newfoundland

By an act passed June 5th, 1919, discrimination in favor of any in the same class and equal expectation of life in the amount of premiums charged or dividends payable under the policy is not allowed. The companies are required to deposit with the minister of finance and customs a copy of their established rates for all kinds of insurance. No estimate, illustration or statement of the dividends or shares of surplus expected to be received in respect of any policy issued by any company is allowed.

## TAXATION

In connection with taxation on life insurance companies in Canada the tax rate is usually based upon a percentage of the premium income after deducting the premiums returned

during the year to the policy-holders, cash dividends, and premiums paid for reinsurance to other companies, if operating in the province; otherwise the company reinsured is required to hold such tax and pay to the provincial treasurer.

#### Ontario

The Corporation Tax Act, chap. 27, R.S.O., 1914. Amended by the Corporation Tax Act, 1915, and the Corporation Tax Act, 1920. By the amendment in 1920 every life insurance company pays a tax of 1¼ per cent. on all gross premiums, less cash dividends and reinsurance premiums paid. Where the reinsuring company does not transact business in Ontario the company reinsured must deduct and pay the tax on the reinsurance premiums in such case. The tax is payable to the provincial treasurer. Taxes are due on the 1st of January, but shall not be payable until the 1st of October, and are based upon the premiums received during the previous year. The company must file a statement with the provincial treasurer of premiums received before the 1st of June each year.

#### Manitoba

Corporation Tax Act, R.S.M., chap. 191, 1913. Amendment chap. 18, 1919. Tax on premiums is 2 per cent. Statement is to be filed and taxes paid before April 1st annually. Fees of \$205.00.

#### Saskatchewan

Corporation Tax Act, 1913, chap. 21; Corporation Tax Act, 1919. Tax on premiums is graded, 1 per cent. up to \$50,000, 1¼ per cent. from \$50,000 to \$100,000, 1½ per cent. from \$100,000 to \$150,000, 1¾ per cent. from \$150,000 to \$200,000, 2 per cent. on \$200,000 or more. There is a tax on revenue from investments within the province of 40 cents per thousand. Statement of premiums is to be filed before the 1st of May. Taxes are payable before the 1st of July annually.

#### Alberta

Corporation Tax Act, 1907, and amendment, 1908. Tax on premiums is 1 per cent. on gross premiums and ¼ per cent. on income from investments within the province. Return is to be filed and taxes paid before the 1st of July. The annual license fee is \$300.00.

#### British Columbia

Taxation Act, R.S.B.C., 1911, chap. 222; 1913, chap. 71. Tax on premiums is 1 per cent., with allowance of 10 per cent. discount if paid before the 30th of June annually, and surtax of 1 per cent. on premiums, less 10 per cent. discount if paid promptly. License fee is \$5.00.

#### Quebec

6 Éd. VII., chap. 10. 1½ per cent. tax on premiums. Statement is to be filed before the 1st of May and taxes paid before the 1st of July.

#### New Brunswick

Consolidated Statute of 1903, chap. 18. Corporation Tax Act, 1920. 1½ per cent. on premiums and \$100.00 annually.

#### Nova Scotia

Supplementary Revenue Act, 1912. Supplementary Revenue Act, 1919. 2 per cent. on premiums, with minimum charge of \$100.00, payable before the 1st of June.

#### Prince Edward Island

Taxation Act, 1920. \$300, payable half-yearly, 1st of June and 1st of December.

#### Newfoundland

Life Insurance Companies Act, Edward VII., chap. 4. A tax of 1/10 of 1 per cent. of the reserve on insurance in force in the colony, and a fee of \$225.00 annually, is payable to the provincial secretary, payable semi-annually on the 1st of June and December.

The Life Underwriters' Association is developing the two-day educational congress idea, and the president, Mr. O. B. Shortly, Toronto, accompanied by the general secretary, are visiting all of the 44 branch organizations on an educational and propaganda mission.

## LIFE UNDERWRITERS' ASSOCIATION ACTIVE

### Work of Year Deals With Legislation, Education and Field Work—Record of Five Years' Growth

By J. H. CASTLE GRAHAM

General Secretary, Life Underwriters' Association of Canada

**R**APID and enormous as has been the growth of life insurance during the past few years, the Life Underwriters' Association has been more than keeping pace. Since the association established permanent headquarters five years ago it has increased in number of local associations from 23 to 46 and in membership by over 300 per cent. It has also seen the "Life Underwriters' News" developed from an eight-page pamphlet of small size to a 32-page journal of popular magazine size and is declared by many to be among the very best publications on the continent devoted to life insurance and salesmanship.

The work along legislative lines, publicity and education has been greatly strengthened and extended. This last year has seen the inauguration of several new educational features for the benefit of the members of the organization and for life insurance men in general, enabling the association to round out a complete circle of service.

#### Everything for Fieldmen

There is nothing necessary to the development of the life insurance man that the association does not offer. We have been able to secure the sole rights for Canada of the Indianapolis Research and Review Service; also a salesmanship course with a personal service which has produced remarkable results, so much so that the association now underwrites the success of every man who enrolls in the course. It also is able to offer through its headquarters the best books that have been written on the subject of life insurance and salesmanship, whether published in Canada or the United States, together with such "helps" as insurance men find useful in their solicitation of business. Besides this, of course, are the features offered through the local associations, annual convention, and the "Life Underwriters' News." We cannot help but feel that this will do much to raise the status of the agent to the benefit of the institution and the public whom they serve.

#### Important Changes in Laws

In legislation the association has also seen many important and far-reaching developments, this year being a very active one, as Mr. John A. Tory, chairman of the committee on legislation, can well attest. One very gratifying thing was to see the rate of taxation of life insurance premiums reduced in the province of Ontario from 1½ to 1¼ per cent. The taxing of life insurance is the taxing of thrift and virtually penalizes the man who provides for the support of his dependents to free the state from the obligation of caring for them.

The year has also seen the Ontario insurance department reorganized with V. Evan Gray, B.A., LL.B., as superintendent of insurance, and Dr. Frank Sanderson as consulting actuary. Mr. Gray has already done many things which the association has been striving to have done for considerable time. He has instituted a new application for "certificate of authority" from which he is able to get a mental picture of the applicant. By this method it is possible to weed out all those who are not fit persons to become representatives of life insurance.

#### Another Endorsation of Life Insurance

A superannuation bill has been passed by the Ontario government which compels every civil servant in the employ of the government for a stated period of time to carry at least \$5,000 of life insurance in one of the regular "old-line" life insurance companies. This becomes an added endorsement to the institution of life insurance.

The year has also seen the introduction of returned soldiers' insurance by the Dominion government, which will receive applications for a period of two years on lives of all returned men without medical examination, for sums ranging from \$500 to \$5,000.

# New Licenses Indicate Activity in Insurance Field

Armour and Eaton Are New Life Companies Started Last Year—  
Large Number of Fire and Automobile Licenses Issued—Other Casualty  
Lines Are Well Represented—Several Fraternal Societies Start in Canada

FIFTY-TWO new licenses had been issued by the Department of Insurance, Ottawa, for the writing of insurance in Canada up to October 31st last. There were also a large number issued by the various provincial departments. The complete list, compiled by *The Monetary Times*, is shown below.

This activity reflects the favor with which Canada is regarded as an underwriting field. The new licenses are for practically every branch of insurance. Fire and life are, of course, prominent, and among the casualty lines automobile insurance seems to be the most favored, due no doubt to the rapidly-growing possibilities in this field. Fraternal societies are by no means inactive, as eleven new Dominion licenses were issued for this class of business.

# Legal Decisions Affecting Life Insurance

## Dominion and Not Provincial Law Determines Beneficiary of Policy of Society Operating Under Dominion Charter—Case Involving Trust Company is Untangled—Interpretation of Alberta Law Regarding Beneficiaries

THE decisions of the several courts of Canada during the past year in cases involving questions relating to life insurance have not been of a very momentous character, although the one which is dealt with first in this article is important in that it shows the application of a provincial act to an insurance company incorporated under a Dominion charter.

In that case, in re Richardson Estate, the Manitoba Court of Appeal held that a provincial insurance act which purports to enable an insured to revoke the benefit of insurance on his life made in favor of any person whomsoever and to divert the insurance to new beneficiaries, does not override special provisions contained in a policy issued by a Dominion company in conformance with its charter and which limits such powers.

### Will Changed Beneficiary

The necessary facts of the case were that on April 6th, 1895, a policy was issued to Hugh Richardson by the Independent Order of Foresters by which the order agreed to pay to Elizabeth Richardson, his wife, \$3,000. Richardson at the time was living in Saskatchewan, but later moved to Manitoba, dying there on February 7, 1916, and leaving a will by which he bequeathed to his executors all his residuary estate, including "life insurance or the proceeds of any policy of insurance"—one-half of such residuary estate to be paid to his housekeeper, Florence Besley.

The order paid the money into court and in the reference two main questions were asked: (1) Whether the proceeds of the policy pass and become payable out to the executors under and by virtue of the said will, or are they payable to the said Elizabeth Richardson as beneficiary named therein? (2) Whether the said Florence Besley is entitled to any interest in the said proceeds of the said policy or moneys now in court. If so, what share?

The Court of Appeal reversed the decision of the trial judge, who had directed that the proceeds of the policy be paid to the executors to form part of the estate of the deceased for the purpose of distribution in accordance with the provisions of the will.

The method of designating the beneficiary, as required by the order, is contained in section 4, sub-section 5 of the constitution, which is as follows:

"(5) The insurance or mortuary benefit of a member shall be paid to the member himself, or to the wife or husband of, or to the affianced wife of, or to the affianced husband of, or to the children of, or to the blood relations of, or to persons dependent upon, such member, who may have been designated, as provided in the constitution and laws, by name, as the beneficiary of such member, or, subject to the approval of the supreme chief ranger, to such other beneficiary as may be permitted by the laws of the province, state or country in which the member resides at the time of making the designation of the beneficiary or beneficiaries."

The method of changing the beneficiary is contained in section 150 (1) (a), which is:—"By filing with his court his application for change of beneficiary on form No. 14, fully filled in, signed by himself and properly executed, setting forth fully and clearly the changes he desires to make; provided that a designation of a beneficiary not in conformity with section 4, sub-section 5 shall be null and void from the beginning."

### Decision of the Court

Their Lordships in deciding the case say in part: "The main ground upon which it is argued that the Manitoba law applies is that by the Manitoba Insurance Act, where a company is licensed under that act, the moneys payable under a life insurance policy shall be payable in this province; that the insured having become a resident of Manitoba at the time of

his death the laws of that province would govern his life insurance. But under section 3, that act does not apply to a company licensed by the Dominion of Canada, as is the Independent Order of Foresters. In my view it has not been shown that the law of Manitoba applies in this case.

"If the Manitoba statute applies to such insurance and a member of the society is permitted to change the beneficiary as he pleases, and even to divert the insurance to a stranger, as it is contended he may do under section 15, then the purposes and objects of the society may be frustrated and a serious change be effected in its constitution and status as a fraternal society.

"To remove the restrictions placed by the constitution and laws upon the change of beneficiaries and the application of the insurance would be a serious interference with the objects of the society as incorporated by the Act of the Parliament of Canada.

"Section 15 of the Life Insurance Act would not only interfere with the contract itself, but it would seriously affect the constitution and status of the order by controlling and abridging its powers.

"The life insurance in the Order of Foresters, and the proceeds of it, belonged to the testator's wife and was not his to dispose of. He did not attempt to revoke the benefit or appropriation in her favor.

"I would answer the first question in the stated case as follows: The proceeds of the endowment certificate, being the moneys paid into court, are payable to Elizabeth Richardson, the beneficiary designated by the deceased. To the second question I would answer: No."

### Standard Trusts vs. Canada Life

In another life insurance case, that of Standard Trusts Company vs. Canada Life Assurance Company, the facts were that the Standard Trusts Company was the executor of the will of one Ferris, who in his lifetime was a half-owner in certain Edmonton property upon which he had given a mortgage for \$50,000 to the Canada Life Assurance Company. It was a condition of obtaining the mortgage, at the rate of 7 per cent., payable \$5,000 a year for four years and the balance in five years, that an insurance policy for an amount equal to the principal should be given and assigned to the company as collateral security. The policy was issued to Ferris and assigned, but half the first premium was charged to his co-owner.

The second premium was paid by Ferris, one-half being charged to and paid by the individual defendants who had then acquired the half-interest of Ferris' co-owner, but before the third premium became due the individual defendants had acquired the whole interest in the lands mortgaged. A term of the mortgage made the insurance premiums a charge on the land if not paid by the assured, and upon the acquisition by the defendants of Ferris' interest on July 10, 1914, an agreement was entered into between them which provided that Ferris should assign the policy to the defendants, but that they should pay the premiums.

Although one instalment of \$5,000 was past due at the time of this agreement it had not yet been paid. One instalment of \$5,000 was subsequently paid and Ferris paid the defendants \$110, which was one-tenth of the surrender value at that time of the policy and reimbursed the defendants one-tenth of the next annual premium. Before any other instalment was paid or any further premium paid, Ferris, who had gone to the war, was killed in action.

### Awarded One-tenth of Policy

The court's decision was rendered in the following words: "When the necessary proofs to obtain the insurance moneys

were forwarded it was found that a mistake had been made by Ferris in understating his age and that at his actual age the premiums paid would be the premiums for an insurance of \$47,500 instead of \$50,000, and in accordance with the terms of the policy the policy was treated as one for \$47,500. Just how this little error affects the terms of the agreement and the rights of the parties is what is in issue in this action."

"I agree with the trial judge that the plaintiff is not entitled to the full beneficial interest in the policy, subject to any claims of the defendants for reimbursement of the premiums paid and have nothing to add to the reasons he gives for reaching that conclusion.

"I also agree with him that the plaintiff is not entitled to an interest in the policy represented by the three \$5,000 instalments which were payable by the terms of the mortgage but only one of which had been actually paid at the death of the assured.

"I agree with the trial judge also that the plaintiff is entitled to one-tenth of the profits because Ferris was bearing the burden of one-tenth of the policy which had been released to him.

"I would therefore allow the appeal and declare that the plaintiff is entitled to one-tenth of the amount of the policy and profits amounting to \$4,750 and \$75.57 respectively. The plaintiff should have judgment against the individual defendants for \$4,825.57 with interest at the legal rate from January 16, 1917."

#### Where Beneficiary Dies Before Assured

In another case, the last to be considered, the Supreme Court of Alberta decided that an insurance policy in favor of a wife who died before the maturity of the contract, became under the Life Insurance Beneficiaries Act, one for the benefit of the children of the assured and formed no part of the estate of the assured, but if the policy was payable to the wife if living and if not then to the assured's executors, administrators or assigns, such insurance went to the executors of the will of the assured and formed part of his estate.

The facts as stated by His Lordship were as to whether the money payable on two policies of insurance on the life of the deceased was or was not to be taken into account in deciding the question of the liability of his estate for succession duty. The Canada Life policy for \$5,000 was upon its face made payable to his wife. The Confederation Life policy for \$10,000 was upon its face made payable to his wife if living, and if not, then to his executors, administrators or assigns. His wife predeceased him and he did not marry again. He never made any other declaration with reference to this insurance money and these policies stood at the time of his death as they had always done. He left but one child surviving him.

The reasons for the decision given on the above facts were rendered in the following words:—

"(1) That as the Life Insurance Beneficiaries Act provides that if a sole beneficiary dies before the maturity of the contract the assured may by declaration provide that the policy shall be for the benefit of himself or of his estate, or of any other person or persons whether or not such person or persons belong to the class of preferred beneficiaries. In the absence, however, of any such declaration, a policy in favor of a wife who dies before the maturity of the contract becomes one for the benefit of the child or children of the assured, and that is his case. The money payable under the Canada Life policy is, upon the facts and by virtue of the statutory revisions, the property of the son of the assured, and as a preferred beneficiary. It therefore forms no part of the estate of the assured and it is only on the property of the deceased that succession duty is payable.

"(2) That the Confederation Life policy is different. Though his wife was the original beneficiary under it, upon her death it was to be paid to the executors, administrators or assigns of the assured. It was quite competent to the assured to thus direct. He could have done it after her death, and I see no reason why he could not do it in advance of and conditional upon her death. I do not see how the son can possibly claim this money as a preferred beneficiary. It must go, I should say, to the executors of the will of the assured, and form part of his estate. It, therefore, was not wholly kept up

by him for the benefit of one of the class to which exemption is given by section 6 (g) of the Succession Duties Act (husband, wife, child, grandchild or mother of the deceased), and is therefore dutiable."

#### B. C. LEGISLATION FOR INSURANCE OF MINORS

##### Minors Over Sixteen Years May Now Ensure of Own Accord —Parent Need Not Have Pecuniary Interest to Effect Insurance on Child

TWO amendments to the insurance law of British Columbia were passed at the 1920 session of the provincial legislature. The first was a slight amendment to the fire insurance law, reading as follows:—

"1. This act may be cited as the 'British Columbia Fire Insurance Act Amendment Act, 1920.'

"2. Section 5c of the 'British Columbia Fire Insurance Act,' being chapter 113 of the 'Revised Statutes of British Columbia, 1911,' as enacted by section 3 of chapter 36 of the Statutes of 1919, is hereby amended by adding the words 'merchandise' between the words 'of' and 'mercantile' in the fourth line thereof."

#### Insurance for Minors

The second is an act to amend the "Life Insurance Policies Act," and reads as follows:—

"1. This act may be cited as the 'Life-insurance Policies Act Amendment Act, 1920.'

"2. The 'Life-insurance Policies Act,' being chapter 115 of the 'Revised Statutes of British Columbia, 1911,' is amended by adding the following as sections 13a, 13b, and 13c:—

#### Policies on the Lives of Infants

"13a. A minor over the age of sixteen years may effect contracts of insurance on his life, and may do in respect of any such contract whatever under this act a person of full age may lawfully do, and the like rules of construction shall prevail.

"13b. No contract of insurance effected by a parent upon the life of his child shall be invalid by reason only of want of pecuniary interest in the life of the child.

"13c. (1) No contract of insurance shall be effected on the life of a child unless the child is at least one year old.

"(2) Where a contract of insurance is effected on the life of a child under ten years of age, the insurance money payable on the maturity of the policy shall not exceed the following amounts:—

"Thirty-two dollars if the child dies under the age of two years:

"Forty dollars if the child dies under the age of three years:

"Forty-eight dollars if the child dies under the age of four years:

"Fifty-six dollars if the child dies under the age of five years:

"Eighty-three dollars if the child dies under the age of six years:

"One hundred and twenty dollars if the child dies under the age of seven years:

"One hundred and sixty dollars if the child dies under the age of eight years:

"Two hundred dollars if the child dies under the age of nine years:

"Two hundred and sixty dollars if the child dies under the age of ten years:

"(3) If an insurer enters into a contract on the life of a child under ten years of age, and the insurance money payable thereunder exceeds the amount fixed by subsection (2), the premiums paid may be recovered from the insurer by the person making the payments, together with compound interest thereon at the rate of seven per cent. per annum.

"(4) Except as provided by subsection (5), this section shall not apply to a contract of insurance effected:—

"(a) Before the enactment of this section; or

"(b) On the life of a child of any age, if the person effecting the insurance has a pecuniary interest in the life of the child; or

"(c) On the life of a child under ten years but not less than one year of age, if the insurance money payable on the death of the child is limited to the premiums paid with interest.

"(5) The provisions of this section shall be printed in conspicuous type on every contract of insurance hereafter effected on the life of a child under ten years of age and on

every circular relating to or application for any such contract, or a copy of such provisions printed in conspicuous type shall be firmly attached to every such contract, circular or application, and any person who contravenes this subsection shall be liable, on summary conviction, to a penalty of two hundred dollars.

"3. The amendments to said chapter 115 enacted by section 2 of this act shall, except as therein expressly provided, apply to all contracts of insurance, whether effected before or after the date on which this act comes into force."

## Ontario Amendment to Insurance Act

### Agent's Certificate of Authority Limited to Individual—Prohibition on Acting Without Certificate—Division of Insurance Business for Purpose of Licensing—Amendment to Permit Amalgamation of Friendly Societies

ONE of the important pieces of legislation regarding insurance during the past year was the act passed by Ontario amending the Insurance Act. The clauses are as follows:—

"1. This act may be cited as The Ontario Insurance Amendment Act, 1920.

"2. The clause lettered (b) in section 40 of The Ontario Insurance Act is amended by striking out the words 'not exceeding six dollars per week' and substituting therefor the words 'not exceeding ten dollars per week.'

"3. Sections 69 and 70 of the said act are amended by striking out the figures '1910' wherever they appear in the name 'The Insurance Act, 1910 (Canada).'

#### Agents' Certificates

"4. Section 99a of the said act as enacted by section 5 of The Ontario Insurance Amendment Act, 1914, is hereby amended as follows:—

"(a) By striking out the words 'firm or corporation' in the third line of subsection 1;

"(b) By repealing subsection 2 of the said section and substituting the following therefor:—

"(2) No agent shall act for any company in Ontario unless he has fully complied with the provisions of this section and has procured an agent's certificate of authority from the superintendent of insurance to do the class of insurance which that company is licensed or registered to do in the province;

"(c) By adding the following subsection 2 (a):—

"(2a) An agent's certificate of authority may be issued for any one or more of the following divisions of insurance business, viz: (a) life insurance; (b) fire insurance; (c) casualty insurance. The superintendent may make regulations specifying the classes of insurance which may be included in these divisions and may include any class of insurance in two or more of the said divisions if in his opinion the character of the business so requires;

"(d) By repealing subsection 5 and substituting the following therefor:—

"(5) An agent having received a certificate of authority may act during the term of such certificate as agent for any company licensed or registered in Ontario to do the class of business to which the said certificate of authority applies.

"5. Subsection 1 of section 163 of the said act is hereby amended by striking out the word 'or' in the second line thereof and by inserting after the words 'lawful heirs' in the second line thereof the words 'or next of kin.'

#### Amalgamation of Friendly Societies

"6. The said act is amended by inserting therein the following section:—

"78j—(1) A friendly society incorporated and registered under the law of Ontario shall not reinsure or amalgamate with or accept the transfer of membership or funds of any other society registered according to the provisions of this act unless such reinsurance, amalgamation or transfer is evidenced by a contract in writing setting out in full the terms and conditions of such reinsurance, amalgamation or transfer, and such contract is filed with the superintendent together with a sworn statement of the financial condition of each of such societies by its principal officers and a certificate of such officers duly verified under oath that such reinsurance, amalgamation or transfer has been approved by a vote of two-thirds of the members present or duly represented at a meeting of the supreme legislative or governing body of each of said societies regularly called.

"(2) The superintendent may require such additional actuarial or other reports as he may deem necessary, which reports shall be prepared at the expense of the societies.

"(3) If, in his opinion, such financial statements are correct and reports satisfactory and the contract in conformity with the provisions of this subsection and such reinsurance, amalgamation or transfer is just and equitable to the members of the societies and that the interests of such members are properly protected by the contract, he may approve such reinsurance, amalgamation or transfer and issue his certificate to that effect and thereupon such contract shall be of full force and effect and binding upon the societies which are parties thereto and upon all members thereof.

"(4) If one of the contracting societies is a friendly society not incorporated under the law of Ontario, the superintendent shall not issue his certificate until it has been established to his satisfaction that such society has fully complied with the requirements of the law of the legislative authority under which the society was incorporated; provided that a certificate of the supervising insurance official appointed by such legislative authority that such society has fully complied with the requirements of the law of the said authority shall be sufficient evidence to the superintendent of that fact."

#### NO CHANGES IN PRINCE EDWARD ISLAND

There were no amendments to the insurance law of Prince Edward Island at the 1920 session of the provincial legislature.

## Full Insurance makes financial help surer

Every Bank Manager knows the value of Business Insurance. One of the most important questions he will ask when receiving an application for a loan is "How much life insurance is carried?" For the one man business, the partnership, or the big corporation, life insurance is a necessity.

Fire Insurance at Tariff Rates

# Burglary Insurance Placed on New Footing

Work Accomplished by Burglary Underwriters' Association Includes Revision of Rates and Agents' Commissions—Covering Must Be Fifty Per Cent. of Fire Insurance—Improved Methods May Lead to Reduction in Rates

By Col. A. E. KIRKPATRICK

General Manager for Canada, United States Fidelity and Guaranty Company

**D**URING the year 1920 burglary insurance in Canada made interesting strides. Up to the date of the writing of this article (November 13th) there are fifteen companies licensed to do burglary business in Canada, of which all are operating more or less actively in the burglary business except one, and all of whom have already joined or intimated their intention of joining the Burglary Underwriters' Association as soon as they are ready to commence active operations.

The year 1920 has shown a vast improvement in the spirit existing between the various managements and there has developed a kindly feeling of mutual assistance looking towards the general betterment of the business conditions, both on behalf of the companies' interest and on behalf of the interest of the assured, with the absence of petty or carping criticism or ill-feeling.

## New Manual of Rates

During the month of January there were completed and distributed the new manuals of rates. The magnitude of this work alone is shown by the fact that an order for one company amounted to over 1,000 copies.

During the year steps were taken, and are being followed up, with a view to co-ordinating the requirements of the burglary companies to the police and fire departments of various cities. Previously it frequently happened that a burglary company on inspection of a risk would make certain recommendations as to the protection of windows and doors, which recommendation would meet with the full approval of the police only to be ordered removed on instructions from the fire department of the city. In this branch of the work alone there is a vast amount of constructive work yet to be accomplished.

In the new manual of rates it is required under residential burglary insurance that the assured state the amount of fire insurance which he carries, and places an amount of not less than 50 per cent. of the fire insurance carried on the first item of the burglary policy, termed in the policy "Class 'A'" property, which consists of the following articles: "Class 'A' property consists of articles of gold and sterling silver, plated ware, watches, precious stones, jewelry, trinkets, bric-a-brac, paintings, etchings, engravings, wearing apparel, furs, Oriental rugs, wines and liquors."

There is another ruling that no policy shall cover property in "Class 'A'" unless it also covers property in "Class 'B'" for at least \$1,000. "Class 'B' property consists of household goods and personal property, excluding property in Class 'A' and excluding coin and stamp collections, medals, manuscripts, plans, patterns, models, designs, deeds and other documents, books and other records of business or affairs."

## Avoids Co-insurance Clause

These requirements are based on the experience of the companies and were made in order to avoid the necessity of inserting in their policies the co-insurance clause, and to distribute the cost fairly amongst the assured of all classes of wealth. It can readily be seen that on burglary insurance for only \$1,000 covering property in a residence where the contents are valued at perhaps \$40,000 or \$50,000 should a loss occur it would mean a total loss on account of the extremely valuable character of the contents in such a residence, while a residence with contents valued at only \$3,000 the proportionate loss in case of burglary would be negligible in comparison with the former case cited.

The result of the old system in actual practice was that the small owner was being penalized at the expense of the large owner and under such a system any future reduction in residence rates was almost an impossibility.

Under the new system the liability of the company and the premium received are in direct proportion to the value of the contents of the residence insured and closely follows the English system, and in the opinion of the underwriters will ultimately enable the companies to show such an experience that a reduction of rates on residence burglary and theft policies will be possible, and it may be stated in passing that approximately 75 per cent. of all the householders in England carry burglary insurance.

In its initial stages a great deal of opposition was met on the part of the well-to-do man, who previously only carried a \$1,000 policy, on account of the increased cost to him under the new system of residence theft insurance, but in the majority of cases when actual facts were explained the assured readily recognized the justice of the rating methods adopted and accepted willingly the increased covering. One feature which is often overlooked by owners of residences is that frequently the loss of articles stolen and removed from the premises is less than the actual malicious damage and injury to the valuable but immovable property within the range of the thieves' tools. Costly furniture torn open with jimmies, valuable pictures ruined, bric-a-brac smashed, and another common form of theft, the complete removal during vacancies of all lead pipe and brass fixtures, so often the prey of the lower grades of housebreakers.

It has been asked why the companies do not simply ask for a valuation of the furniture instead of using fire insurance as a basis, and the answer to that question is that the English system has proven best in actual experience for both the companies and the assured, and after due consideration was adopted by the managers as a model to follow, practical experience having shown that in England burglary insurance can be sold cheaper than anywhere else in the world, and in that country more people take advantage of it.

## Agents' Commissions Revised

During the year the association approached the managers of the different companies on the question of agents' commissions, having in mind the recommendations made by Judge Masten in his report on insurance conditions, and an arrangement was consummated by which the companies have brought agents' commissions into line with the honorable judge's report.

The association is now engaged in studying a method of adding the co-insurance feature to mercantile risks, and when completed, together with the complete revision of the mercantile classifications, should materially improve the conditions in this class of insurance, which was in danger of becoming entirely too hazardous for the companies to engage in under the old system of rating.

The association has arranged a system by which the owners of summer residences can obtain insurance, a class of insurance which it was practically impossible to obtain previously, and as this feature becomes more widely known it will be found that most summer residence owners will be glad to avail themselves of the opportunity of covering their property against burglary.

The annual meeting was held on June 18th, 1920, at which the following officers were unanimously elected for the coming year: President, A. E. Kirkpatrick; Montreal vice-president, R. Welch; Toronto vice-president, W. H. Burgess; treasurer, John Good; Montreal secretary, T. D. Hutchings; Toronto secretary, H. G. Humphries. Bureau Committee—Chairman, A. E. Kirkpatrick; John Emo and J. C. Gagne, of Montreal; F. J. Lightbourne and C. A. Withers, of Toronto.

# Three Amendments to Manitoba Insurance Laws

## Affidavit Required from Special Broker—Clauses in Life Insurance Act Affecting Beneficiaries are Amended—Miscellaneous Changes in Insurance Law

AT the 1920 session of the Manitoba legislature three amendments to the insurance law of the province were passed. The first two amended The Manitoba Insurance Act, the first reading as follows:—

"1. Section 3 of 'The Manitoba Insurance Act,' being chapter 98 of the Revised Statutes, 1913, as enacted by section 2 of chapter 46 of 9 George V, is repealed and the following substituted therefor:—

"3. Only sections 2, 5, 6, 8, 9, 12 to 20, 44 to 47, subsections (3), (4) and (6) of 51, 52, 53, 64, 72 to 95 of this act shall apply to a company licensed by the Dominion government.

"2. Section 4b of said act as enacted by section 6 of chapter 33, 5 George V, is amended by striking out the word 'five' in the sixth line thereof and by substituting therefor the word 'three.'

"3. Paragraph (d) of section 10 of said act is amended by adding thereto after the word 'vehicle' in the second line thereof the words 'other than motor vehicles.'

"4. Subsection (5) of section 19 of said act is amended by striking out the words 'one and one-third per cent.' in the ninth line thereof and substituting therefor the words 'two per cent.'

"5. (1) Sub-paragraph (i) of paragraph (b) of section 45 of said act is amended by adding the words 'and in the case of a company doing accident, sickness or guarantee and surety insurance' after the word 'Manitoba' in the last line thereof.

"(2) Sub-paragraph (iii) of said paragraph (b) is amended by striking out the words 'an accident or guarantee and surety' from the fifth and sixth lines and substituting therefor the words 'a plate glass insurance.'

### Certificate to Partnership

"6. Subsection (2) added to section 81 of the said act by section 7 of chapter 46 of 9 George V, is hereby repealed and the following substituted therefor:—

"(2) The certificate of authority issued to a partnership or firm shall include those of the partners not exceeding three who devote all their time to the business of the partnership and not more than one employee of the partnership nominated for that purpose in writing by the partnership with the written approval of the superintendent of insurance, and the certificate of authority issued to a corporation shall include not more than four officers of such corporation nominated for that purpose by the corporation in writing signed by the president, secretary or manager of the corporation under its corporate seal, provided such nomination shall be approved in writing by the superintendent of insurance. Any such nomination may be revoked at any time and the name of another employee or officer substituted, upon the written application of the partnership or corporation to the superintendent of insurance and with his approval in writing.

"7. Section 91a of said act as enacted by section 9 of chapter 46, 9 George V, is amended by striking out the word 'agent' in the ninth line thereof and substituting therefor the word 'person.'

"8. This act shall come into force on the day it is assented to."

The second, which relates to affidavits by special brokers, reads as follows:—

"1. Subsection (2) of section 19 of 'The Manitoba Insurance Act,' being chapter 98 of the Revised Statutes of 1913, is hereby repealed and the following substituted therefor:—

"(2) In the event of any insurance having been procured under and by virtue of the said license, there shall be made, by the special broker, an affidavit which shall be filed in the office of the superintendent within thirty days after the procuring of such insurance. Such affidavit shall have force and effect for one year only from the date thereof and shall set forth that after diligent effort it has been ascertained that insurance, or sufficient insurance, required to protect the prop-

erty sought to be insured, could not be obtained, or that such insurance, or sufficient insurance, could not be obtained at ordinary or reasonable rates of premium or on satisfactory terms from insurance companies duly authorized to carry on business in Manitoba. But such special broker shall not be required to file such affidavit if a similar affidavit relative to the same property has been filed within the preceding twelve months by any other special broker.

"2. Section 95 of said act, as enacted by section 11 of chapter 46 of 9 George V, is hereby amended by adding the following words: 'Provided that this section shall not affect mortgages or agreements held on property situate in the City of Winnipeg.'

"3. This act shall come into force the day it is assented to."

The third is an amendment to the Life Insurance Act, reading as follows:—

"1. Section 8 of 'The Life Insurance Act,' being chapter 99 of the Revised Statutes of Manitoba, 1913, is hereby amended by adding at the end thereof the following words: 'but the assured shall not, except as provided by section 9 of this act, revoke or alter any disposition made under the provisions of this act in favor of any one or more of the preferred classes set out in section 7 of this act except in favor of some one or more persons within the preferred class, so long as any of the persons of the preferred class in whose favor the contract or declaration is made are living.'

"2. Section 15 of the said act is hereby repealed and the following substituted therefor:—

"15. If in case of a policy of insurance heretofore or hereafter effected by a man or woman, it is expressed on its face to be for the benefit of, or has been heretofore or shall be hereafter under this act appropriated for the benefit of any person or persons other than his wife or her husband, or his wife and children, or her husband and children, or his or her children or any of them, then the insured may, by an instrument in writing attached to or endorsed on the policy or identifying the same by its number or otherwise, absolutely revoke the benefit or declaration or appropriation previously made and apportion the insurance money, or by like instrument from time to time reapportion the same, or alter or revoke the benefits, or add or substitute new beneficiaries, or divert the insurance money wholly or in part to himself or his estate, provided that the insured shall not alter or revoke or divert the benefit of any person who is a beneficiary for value.

"3. The repeal of said section 15 shall apply to all policies of insurance existing or future, but shall not affect any payments which have already been made by any insurance company in accordance with any revocation, appropriation, reapportionment or diversion of the moneys as permitted by said section 15 before its repeal.

"4. Section 25 of the said act is hereby amended by adding thereto the following subsections:—

"(2) Where a contract of insurance is made or declared to be for the benefit of one or more preferred beneficiaries and all of them are of full age, they and the assured may surrender the contract or may assign or dispose of the same either absolutely or by way of security.

"(3) Where such preferred beneficiaries include children it shall be sufficient so far as their interests are concerned if all then living are of full age and join in the surrender or assignment or disposal, as the case may be.

"(4) Where a person is entitled to a benefit only in the event of the death of another person named as a beneficiary it shall be sufficient for the purposes of this section if such last mentioned person joins in the surrender, assignment or disposal.

"5. This act shall come into force on the day it is assented to."

## FIDELITY AND SURETY UNDERWRITING

Figures for Two Classes Combined in Department's Report —  
Emphasis Laid on Preventive Side by Companies

BY HENRY E. RAWLINGS

*President, Guarantee Company of North America*

FIDELITY and surety underwriting are treated as one classification by the insurance department of the Dominion of Canada, and the premiums and losses of the respective classifications of underwriting are not shown in the report of the superintendent, in which he bulks the two under "Guarantee Insurance" and shows that the total premiums received by all companies during the year 1919 were \$1,138,882, and the amount of claims paid and outstanding at the end of the year \$548,750. There was a fair increase in the premiums received and somewhat of a decrease in the claims paid and outstanding in comparison with the previous year, which shows favorable increase of about \$90,000 in general results, so far as concerns premiums and losses. The expenses of management, cost of general operation and disbursements for commission, to obtain or retain business, are not dealt with separately by the superintendent of insurance, but are all charged up as one under "General disbursements of the respective companies." However, I am inclined to the impression that they pretty well scale down the general results as a whole and have left only a small margin for most of the companies to carry over to surplus from their year's fidelity and surety underwriting.

### Twenty-one Companies in Business

There are twenty-one companies transacting a guarantee business in Canada, of which ten are Canadian, six British and five American. All of these companies transact, in addition to guarantee insurance, one or another kind of miscellaneous casualty business, and all belong to the Canadian Guarantee Underwriters' Association, with the exception of one Canadian company and an American company, which are independent of that association and transact guarantee insurance exclusively.

Fidelity underwriting is an unknown contingency. Declined cases are a possible loss avoided, and it is on the apparently good risks that the company pays losses, and sometimes very large losses, through the defalcations of trusted employees hitherto considered above suspicion, which are the unfortunate exceptions where the guarantee company's investigations have not functioned. Certain companies have, during the past year or two, been exploiting various new kinds of "bonding propositions," the convenience of which sometimes appeals to the employer, but which propositions are absolutely apart from the fundamentals of suretyship, viz., the completion of applications and service by investigation of risks and periodical reinvestigation or revision of risks, the effect of which is far more valuable to the employer for its moral influence upon the employee covered than the amount of the indemnity in the contingency of a defalcation, with its attending costs and undesirable publicity, which such fundamentals aim to prevent, and no doubt largely accomplish.

### Rates Are at a Minimum

The fidelity clientele of the various companies transacting fidelity business has become accustomed to the rate established by competition during past years, and a suggestion to-day of an increase of rate invariably prompts inquiry by the clientele either through a broker or direct to the home office of another company for a rate for the business, with the result, more or less, that present rates remain at the minimum.

One of the companies independent of the association above referred to has lost a clientele by reason of increasing its rate in consequence of its experience with the client's business. On the other hand, it has acquired new clientele from some of the companies of the association where the experience of that company with the client's business or its volume would seem to merit a lower rate than that at which it was being written, any inconvenience to the employer being offset by the effect reflected through the completion of new applications by the

employees and the investigations instituted by the company acquiring the business.

Surety underwriting involves both the moral hazard and the ability, record and resources of the principal, and losses, when they have occurred, have been generally the result of a lack of primary investigation, or bad judgment, or misplaced confidence, and while apparently the latter seems in some instances to have been the case during the year 1919, on the whole the general results of some of the companies have been satisfactory and profitable.

## RIOT INSURANCE STILL BEING CARRIED

Many Firms Realize Danger During Coming Year—Chief  
Demand is in Larger Centres

BY HAROLD HAMPSON

*Robert Hampson and Son, Ltd., Montreal*

IN the year 1919 a large business was done in riot and explosion insurance, the cities where it was most in demand being Winnipeg and Toronto, but there was also a considerable demand in Montreal and in the other leading cities and towns of the Dominion. This demand was largely due to the trouble in Winnipeg and the threatened trouble in Toronto. A very large number of firms who took up insurance then are continuing to carry it, realizing that there is grave danger of trouble on account of the numbers that are likely to be unemployed during the winter. The rates charged for this form of insurance by the few companies who write it are very low, except in times of actual or threatened strikes. It is surprising that more Canadian firms do not carry it. In the States this class of insurance is in very general demand and large numbers of firms look upon it as being very nearly as important as fire insurance to them.

The great explosion in Wall street was a striking (I do not want to be guilty of a pun) illustration of the necessity of this form of insurance.

## MARINE INSURANCE WAS FORTUNATE

No disaster is found in the records of shipping on the great lakes in 1920, in spite of the fact that the navigation season was long. In the second week of November the markets of the grain trade across the Atlantic had only begun to draw upon the elevator stores at the head of the lakes. Insurance on steel boats dates to November 30, and where good reasons were given the policies were extended for another ten days. This brought the season up to December 10, and meant that millions of bushels more were moved from Canadian elevators to Atlantic boats at Montreal. Of course, bad weather held up some of the cargo boats temporarily, but it has to be a "pretty bad storm" that makes a steel freighter on the great lakes seek shelter. Risk to navigation late in the year was admitted by the marine men spoken to, but they all declared the steamers must be run to handle the grain trade.

It is the very general opinion that the season on the lakes has been a record one, every freighter carrying to capacity on each trip. The coal trade has been heavy, and it is now a forecast that the grain movement surpassed any other year.

## UNITED STATES LIFE BUSINESS EXPANDING

Seven and a half billion dollars of life insurance was bought in 1919 in the United States. Indications are that an equal amount has been written in the first ten months of 1920, says the "Travelers' Protection and Agents' Record," issued by the Travelers' Insurance Co. "Significant figures. In two and a half years at this rate the amount of new life insurance will equal the entire capital stock and bonded indebtedness of all the railroads in the country."

*The Canadian City with a Great Present and a Wonderful Future*

*As an  
Industrial  
Location*

**A**MPLE supply of Raw Materials—from Forest, Sea and Mines. Abundant Fuel supply at all times with easy transportation. Electric Power in abundance at reasonable cost—from great Hydro-Electric plants. Industrial Sites available on long leases and on favorable terms.

A Water Supply unequalled for purity. Outdoor work possible practically the year round. Assistance to legitimate industries granted by Province.

*As a  
Trade  
Centre*

**O**NE of the finest harbors in the world—Open the year round. The Canadian Gateway for Trans-Pacific trade.

Regular Steamship service to the Orient, to Australia, New Zealand and India—to Atlantic ports—to the Old Country.

Pacific Coast terminus of Canadian and States transcontinental railways.

*As a  
Tourist  
Resort*

**W**ONDERFUL climate—average temperature for past 11 years, 51 degrees—In Summer no extreme heat with nights always cool—The premier Winter resort of Canada with outdoor life possible with comfort practically all Winter.

The centre of magnificent natural attractions—all within a few miles of city's centre—Hundreds of miles of scenic motor drives—Golfing—Hunting—Fishing.

The peer of any city in Canada as a Vacation Resort.

*Write us for detailed information—specifying just what information is desired—and prompt attention will be given your enquiry.*

# Production Caught Up With Demand in 1920

**In Some Industries Supply Overtook Demand, and Dullness Followed—  
Banks Were First to Recognize Changed Conditions—Basic Industries  
Still Sound—Coal and Power Supplies Were Important Factors**

By W. L. EDMONDS.

**T**HE experiences of the manufacturing industry of Canada during 1920 were characterized by much variety, many sharp contrasts, and numerous problems.

During the first half of the year the demand for practically all factory products was in excess of the supply. Overtime was common and night as well as day shifts were not infrequent. And in spite of this many of the factories were even months behind in the filling of orders. That a contributing cause to the delay in filling orders was the general scarcity of raw materials experienced by many of the leading industries there can be no doubt. That it was also a contributing cause to the excessively high prices which obtained is equally certain, many lines of raw materials, and particularly those appertaining to steel, being only obtainable on payment of premiums for anything approaching prompt delivery.

## The Turn in the Tide

To students of economics it was obvious that this state of affairs could not go on indefinitely, for not only were commodity prices, already abnormally high, still under process of inflation, but an undue strain was being made upon the resources of the banks in order to provide temporary capital for both industrial corporations and mercantile houses. Furthermore, the ascending scale of commodity prices was grasped by labor as an excuse for demanding still higher wages.

The turn in the tide of industrial activity began to manifest itself in the early months of the summer, when the banks, in the United States as well as in Canada, decided that heroic measures must be taken to curtail credit by declining to advance loans except for what borrowers could prove were legitimate business enterprises. That which savored of speculative ventures were tabooed.

It will thus be seen that the modification in industrial activity experienced during the latter half of the year is directly due, not to an absence of orders for factory products, but to a curtailment, and a necessary one, in credit. In other words, the cause of credit curtailment was not business depression, as is usually the case, but for the purpose of regulating the financial resources of the country in order that hard times might be averted. In this respect, therefore, this experience is unique.

## Present Banking Accommodation

That the banks were wise in exercising a closer scrutiny in respect to credit accommodation there can be no doubt. The results so far apparent have justified it. Not only has it started commodity prices on the downward trend, a desideratum for which manufacturers and merchants, as well as consumers, were seeking, but it has enabled the banks to conserve their resources for financing the actual business necessities of the country, in the performance of which they might have been seriously handicapped, particularly in view of the financing entailed in moving the bountiful crops harvested.

One has only to glance at the figures contained in the September bank returns, the latest at the time of writing available, to be convinced of this.

Naturally the main factor in regulating the loans which the banks can furnish is the deposits they have on hand. At the end of September the total amount on deposit in the chartered banks of the Dominion was \$1,947,481,000. As the commercial loans at the same time stood at \$1,117,520,000, it will be seen that the proportion of the latter to the former was 72.78 per cent. At the corresponding time the previous year the proportion of commercial loans to deposits was 56.26 per cent., a difference of 16.42 points in favor of September, 1920.

It will thus be seen that in spite of the economy practiced in respect to loans for ventures of a speculative nature the funds of the banks have been drawn upon to a much greater extent than a year ago. The actual increase, as compared with September, 1919, was \$358,945,554, while the increase in total deposits during the same period was \$69,300,272. In other words, while there was an increase during the twelve months of 3.63 per cent. in total deposits that in commercial loans was nearly 34 per cent. How much of this increase can be credited to loans advanced for moving the larger crops that the country experienced in 1920 cannot, of course, be gathered from the returns. But that the banks have been over-conservative in their advances in the shape of commercial loans is not indicated by the above figures.

That certain industries during the last few months have, and still are, feeling the pinch of inadequate accommodation from the banks there can be no doubt. But so far as can be gathered they are mostly confined to either those whose products are classified as luxuries or those which, partly on account of the mild fall and partly due to the tendency of retailers and consumers to defer purchasing until lower prices obtain, find themselves with heavy stocks on hand. Industries of this kind, finding their financial accommodation curtailed, are of necessity being compelled to inaugurate special sales at cut prices in order to relieve their necessities. This is particularly marked in the clothing industry.

## The Basic Industries

Fortunately the basic industries as a whole have so far suffered but little since the period of readjustment set in.

Certain of the iron and steel plants, as a result of the tighter money market and the consequent higher interest rates obtaining, have found it necessary to discontinue large expansions, both actually under way and contemplated. But there has by no means been a total cessation of new additions to plants during the year. The most important new plant brought under operation during the year was that at Sydney for the production of ship plates, the first of its kind in the Dominion, and erected at a cost of about five million dollars. Then, besides other additions, the steel works at Hamilton have recently put into operation a plant for the production of benzol. Further, although on a less extensive scale than anticipated, construction work is still going on at the site of the contemplated big steel plant at Ojibway on the Canadian side of the Detroit river.

As far as actual business is concerned the steel companies of the country have so far at least little or no cause for complaint. The demand may not be as heavy as it was for certain lines, but on the other hand there are other lines, and particularly sheets, in which the mills are still behind in filling orders. Recent official statements indicate that not only will total production for 1920 exceed that of 1919, but that the mills have substantial orders on their books for future delivery. The steel industry is therefore in anything but a bad way.

As to what 1921 may have in store for the steel industry time only can determine. But of one thing we may be assured, and that is that the requirements of the country will be very great. The railways, which are the largest purchasers of steel in the country, are in absolute need of additional equipment of various kinds. And the fact that the government and the Canadian Pacific now own between them the country's railways ensures that the funds necessary to the financing of new equipment will be forthcoming, and particularly in view of the higher freight and passenger rates now obtaining.

### Hardware Manufacturing

The hardware manufacturing industries have been actively employed throughout the year, and at the time of writing at least some of the large plants are still running over time, although nearly altogether on immediate business. As far as business for future delivery is concerned very few orders are being booked, there being a disposition to await a modification of prices, which, as far as many lines of hardware are concerned, promises to be a slow process. That a downward trend is about due the manufacturers themselves concede, but on the other hand they are being handicapped by the continued scarcity and high prices of many lines of raw material and cost of labor, although in respect to the latter increased efficiency is bringing down the cost somewhat, notwithstanding that the rate of wages remains practically without change.

It appears to be the general opinion among manufacturers of hardware that, in view of the general scarcity of dwellings and the deferred construction of large buildings of various descriptions, orders for future delivery will materially improve with the stabilization of prices on a lower basis.

### The Paper and Pulp Industry

As far as the paper and pulp industry is concerned there is yet wanting evidence of a recession in trade. During the year several of the mills have found it necessary to make substantial additions to plant. But notwithstanding the much larger output thereby obtained the demand, both for paper and pulp, exceeds the supply. Approximately 85 per cent. of the country's output of newsprint is exported, and this proportion could undoubtedly be increased, the American market still having an inadequate supply. The export trade in pulp and newsprint during the twelve months ending September had an aggregate value of \$134,919,213, an increase of \$57,308,249 over the corresponding period of 1919.

### The Textile Industries

Manufacturers of woollen textiles have experienced good business throughout the year, and although the quietness of the last few months in the home trade has naturally tended to modify the volume of output, export orders have kept the various mills well employed. Exports of woollens for the first five months of the fiscal year, the latest period for which detail figures are available, had a value of \$1,267,659, compared with \$359,216 the corresponding period of the previous year. In cotton textiles the mills are still fairly well employed on orders for immediate delivery. Buyers on future account are disposed to defer placing orders, and the mills are in the meantime making an effort to reduce stocks in raw material as well as in the finished product. During the current fiscal year increased competition from foreign manufacturers has been experienced, as is evidenced by the trade returns. On the other hand, home manufacturers have been experiencing an increase in their exports, although by no means corresponding to the gain in the importation of foreign-made cotton textiles.

Taking all descriptions of textiles and their products the manufacturers during the twelve months ending September did an export trade amounting in the aggregate to \$18,872,223, as compared with \$16,858,647 the corresponding period of 1919.

### Boot and Shoe Industry

The boot and shoe industry has naturally suffered from the tendency of both merchants and consumers to defer purchasing in anticipation of lower prices. In some instances manufacturers found it expedient to close factories for a season. Within the last few weeks, however, an improvement has been experienced, and particularly by the factories in Ontario. But while there has been a lull in the home trade, the foreign, on the other hand, has experienced an expansion, the exports for the first five months of the current fiscal year amounting to \$5,679,720, as against \$1,120,334 for the corresponding period of the previous year.

The lull experienced by the boot and shoe trade naturally had an adverse influence on the leather industry. But it, too, has found a substantial measure of compensation in the

foreign trade, the exports of sole and upper leather for the five-month period having a value of \$10,194,689, compared with \$4,383,970 the corresponding period of 1919.

### The Flour-Milling Industry

Conditions have been rather unsatisfactory to the milling industry practically throughout the whole year owing to the decline in business on export account, there only having been shipped abroad during the twelve months ending September 5,419,857 barrels, compared with 9,747,940 and 10,329,988 barrels for the corresponding periods of the two previous years. The annual statements of the large milling corporations show, however, that in spite of a lessened output and smaller net earnings, financially they are in a strong position.

### Adverse Influences

The adverse influences which the Canadian manufacturing industry as a whole experienced during the latter half of 1920 were by no means confined to declines in output and scarcity of raw material. With rare exceptions there was also experienced a shortage of coal and of electric energy. Difficulties in this respect were experienced by many manufacturing plants throughout the year. Special federal taxation was another disturbing factor as far as the financial aspect was concerned. Manufacturers are by no means disposed to shirk their responsibilities in respect to taxation, but when it is of such a nature as to hamper expansion and discourage capital investment they are of the opinion that attention should be given to devising ways and means of raising the necessary revenue that would be less injurious in its effect upon the manufacturing industries of the country.

### Outlook for the Future

That the present lull which industry is experiencing as a result of the advent of that period of readjustment which everyone concedes to be a necessity will extend over a considerable period of time is not the opinion of either bankers or manufacturers. That there are many sound reasons for such conclusion there can be no doubt. In the first place there are the crops of 1920 to be taken into consideration. Not only was the yield larger than in any year since 1915, but from the standpoint of value probably the best in the history of the Dominion. The value of the wheat crop alone, estimated at about \$700,000,000, exceeds by about \$61,000,000 the aggregate value of all field crops in 1914, while the acreage under cultivation in the Dominion has increased during the six-year period by 75 per cent. That 1921 is likely to experience a further and a substantial increase in the acreage there can scarcely be any doubt, particularly in view of the gratifying experience of the past year, and that immigration swelled to about 190,000, as against but 57,700 in 1919. And this increase in immigration not only means more farms, it means more capital, as a great many of those who came into the country last year were provided with funds for investment in agricultural lands.

In respect to the financial resources of the Dominion the situation is anything but discouraging. The manufacturing corporations are infinitely stronger in working capital than they were five or six years ago. The same is to be said of the banks both in respect to capital and reserves, while the deposits of the public, notwithstanding subscriptions to government and other securities amounting in the aggregate to approximately \$2,250,000,000, are in excess of six years ago by over 92 per cent.

Canada is adjusting itself to new industrial and more normal conditions, and not to industrial depression.

More than half a million barrels of apples have been shipped from Halifax so far this season. During November 127,000 barrels were shipped to the United Kingdom. Three steamers which sailed this month took away 54,000 barrels.

# Efficient Forest Management Essential

Depletion of Forests of Eastern States has Multiplied Value of Canada's Timbered Areas—Repetition of United States Experience Must be Avoided—While Forest Areas Have Decreased, Values Have Risen Rapidly

By JAMES WHITE

Deputy Head, Commission of Conservation

A FEW years ago, it was a favorite strategy in after-dinner and kindred oratory to dilate upon the vastness of Canada's natural resources. Sweeping assertions, liberally adorned with such adjectives as "boundless," "unlimited," and "inexhaustible," seldom failed to evoke applause. The expansive mood usually lingered longest and most fondly over the subject of forests. The vision of endless stretches of virgin forests had a peculiarly powerful grip upon the imagination—it had grandeur that commanded all the superlatives of the orator's vocabulary. It was, in short, an ideal talking point. Only eight years ago, a prominent public man stated on the public platform that Canada had "an unbroken belt of timber 400 to 500 miles wide and 4,000 miles long extending from the Atlantic to the Pacific." When a later speaker took exception to this statement, it was evident that his correction received practically no credence by the audience. The mental attitude of this audience was typical of Canadians in general.

## New Light on Forest Resources

To-day, the person who would undertake publicly to describe Canada's forest resources as "boundless" or "inexhaustible" would receive severe criticism. He would stamp himself as being either ignorant or irresponsible, and his statements would be greeted with awkward questions rather than applause.

Why the change? It is not that Canada actually lacks enormous forest resources—she is rich in both saw-timber and pulpwood species, and will be for many years to come—for all time, in fact, if only we are willing to take the trouble to have it so. There need be no misgiving on that score. The point is, however, that great as are our forest resources, they never justified the extravagant assumptions that formerly found common acceptance. Those assumptions were the natural fruit of ignorance. With the exception of a few clear-headed students of the situation, we did not know enough about the actual extent of Canada's timber supplies to warrant making an estimate of their total. Consequently, the accepted estimates were purely guesswork and were bound to be misleading. The student lacked data upon which to found an accurate estimate though he had enough information to demonstrate to his own satisfaction that the accepted figures were grossly exaggerated. A second and equally potent factor in propagating the idea that our forest wealth was inexhaustible was that few had the slightest conception of the rapidity with which even the most magnificent timber resources can be depleted. On both of these points—the real extent of our forest wealth, and the rate at which it is being depleted through cutting, unnecessary waste, fire, windfall, insects and fungi—we have gained much definite information in the past decade, and it has had the salutary effect of bringing us down to earth when discussing the forest resources of the Dominion.

## United States Experience

We are still far from having an adequate idea of the extent of these resources, but we are certain that they are not inexhaustible. Any doubts on that point are entirely dissipated by a review of the experience of the United States. The situation there has given rise to considerable concern and has recently been the subject of careful study. The Forest Service reports that three-fifths of the original timber of the United States is gone, and that the country is using timber four times as fast as it is being grown. One-

half of the timber left is in the three Pacific Coast states. The total stand of saw-timber in the New England states is not more than one-eighth of the original stand, while the pine forests of the lake states have been reduced from 350 billion feet to less than 8 billion.

## Advantageous Effect Upon Canada

Thus far, the effects of the comparative depletion of the timber supplies of the eastern states have been extremely beneficial to Canada. It has been largely responsible for the recent immense expansion of our pulp and paper industry. Coincidentally with the rapid depletion of native timber supplies, there has been in the United States an unprecedented growth in the volume of advertising and in the amount of newsprint consumed, to say nothing of exports, which amount to a handsome total. The publishing business of the United States has reached such proportions that the forests of the eastern and middle western states, where nearly all the pulp and paper mills are situated, cannot satisfy its voracious appetite for newsprint, and heavy imports of pulpwood, pulp and paper from Canada have resulted.

As late as 1909, the United States was self-supporting in newsprint production. By 1919, they had become dependent upon imports for approximately two-thirds of their newsprint or the raw material for its manufacture. Canada's resources have fortunately enabled us to meet the American requirements. The figures tell the tale unmistakably. In 1910, Canada manufactured 161,000 tons of newsprint and exported 25,000 tons. By last year our output had risen over 400 per cent. to 808,000 tons and our exports to 624,000 tons. The figures for the nine months ending September 30 indicate an exportation during 1920 aggregating 700,000 tons. In paper, pulp and pulpwood, we are supplying in raw or finished form about 65 per cent. of the newsprint used by the United States.

So far, excellent. The Dominion has benefited immensely. For many years our splendid timber areas, particularly of pulpwood species, suffered from under-development. At the same time, they were subjected to steady impairment through heavy annual fire losses. In addition, the low timber values put a premium on extravagant methods of exploitation—in fact compelled them. Close utilization could not be practised because only the higher grades of timber and the more valuable species could be taken out at a profit. It was of little avail to advocate the practice of scientific forestry when stumpage values were so low that the additional expense involved would have forced the woods operators to cease operations. It has been the history of new countries the world over that tremendous waste accompanied the exploitation of virgin forest areas, and that the pinch of hard necessity must be felt before either governments, corporations or individuals are willing to make the present financial sacrifice involved in the practice of forestry. That pinch is now being felt in the United States, and the country is at last becoming thoroughly aroused to the imperative necessity for the adoption of a national programme of forestry.

In Canada, developments have naturally been somewhat slower, but, with the rapidly increasing development of the pulp and paper industry in our eastern provinces, the pinch of waning supplies accessible to transportation is likewise beginning to be felt, and it behooves all good Canadians to take a personal interest, before it is too late, in seeing that really adequate measures of forest conservation are taken.

lest this country find itself in the same unenviable position as now do the eastern and southern states. The situation can still be saved, but we must do a good deal more than is being done at present.

Within an incredibly short period, Canada's pulp and paper industry has attained gigantic proportions. Apparently, the only limit to its expansion is that set by the extent of our readily accessible supplies of timber and their capacity to reproduce themselves. Not only does the industry afford profitable employment to capital and labor, but, by virtue of the volume it adds to our export trade, it has become one of the prime factors contributing to the economic strength of the Dominion. It is a national asset of exceptional importance.

#### Increased Value of Timbered Areas

That is not the sole benefit we have derived. The scarcity of American pulpwood supplies, or, more properly, the tremendously increased demand for paper and paper products—for American mills have steadily increased their output, although still to a wholly inadequate degree—has rendered a second inestimable service to Canada. Imagine what would happen to the values of farm lands in our prairie provinces if the United States suddenly found itself compelled to rely upon imports for over half of her wheat requirements. That is essentially what has happened in regard to newsprint supplies. Our vast areas timbered with pulpwood species have experienced an enormous increase in value. They have been converted from the status of largely potential value to that of a real commercial asset. They have been converted into an asset worth conserving, and forest conservation has finally become a sound business policy instead of a mere desirability. On this basis of necessity, forest conservation in Canada will progress more rapidly in one year than in a decade of preaching benefit of financial appeal.

#### Forest Conservation Essential

It is now an indisputable fact—not a fad or theory—that Canada has reached the point where more effective methods of forest management must be adopted. Thus far, the reduction of American timber supplies has been, one might say, a veritable godsend to the Dominion. But it has brought us face to face with the danger that the United States failed to guard against. Let there be no doubt on this point—that the forests of the Dominion are no less vulnerable to depletion than were those of the United States. Moreover, they are to-day bearing the brunt of the demand of both Canada and the United States for newsprint raw material. The weight of that burden is enormous. To meet the requirements of Canada and the United States for the various classes of paper and paper products for one year involves, assuming an average stand of 5 cords per acre, the cutting over of 1,000 square miles of forest in Canada and 1,400 square miles in the United States, quite aside from the heavy demands for the production of lumber and other forest products. American newspapers alone have been using 2,000,000 tons of newsprint per annum and would have consumed much greater supplies had they been available earlier in the current year. While the recent contraction in the volume of advertising has tended to relieve the scarcity that had become so acute, the fact remains that to meet even the normal requirements imposes a tremendous strain upon Canada's timber resources. Every consideration of self-interest and ordinary business prudence urges the immediate adoption in Canada of the most efficient methods of forest management. It is highly encouraging to note that the situation here is fundamentally far more favorable to the adoption of adequate measures of conservation than is the case in the pulpwood forests of the eastern states. This is because the great bulk of our forests are still in government ownership, while all but a very small percentage of the forests of the eastern states have passed into private ownership; in other words, most of our forests are Crown forests, while in the eastern states they are nearly all freehold. And it is a well-established principle that governments, rather than

individuals or even corporations, are in the best position to practice forestry, due naturally to the long-time element involved in growing timber crops.

#### Greater Exploitation

It goes without saying that our forests should be exploited to the limit of their productive capacity, but this statement should most emphatically be interpreted as meaning a permanent, rather than a purely temporary basis. Quite obviously, the industrial future of our country demands the most intensive development of its great natural resources. Always, however, there must be the proviso that the reproducible resources, such as forests, fish, game and fur-bearing animals, must be so exploited as not to destroy them. The keynote of conservation is perpetuation by wise use.

Our areas of non-agricultural forest land are so vast in extent that, if they are properly protected and managed, an enormous future development of all our great wood-using industries will surely be possible. Without such increased efficiency in protection and in the proper handling of our forests, not only will this potential new development be impossible, but an actual falling-off of present development may surely be anticipated with the inevitable exhaustion of virgin supplies, just as in the eastern and southern states. The forest is a crop, like other crops, and may be reproduced time after time on the same soil. Nature's methods are wasteful, especially when abetted by the wasteful hand of man. Properly directed, however, the productive capacity of our forests may be greatly increased, as has been amply demonstrated over vast areas of forest lands in Europe. The potential productivity of our forests is not being adequately provided for now, although distinct progress has been and is being made in that direction. The active support of public-spirited Canadians is urgently needed to hasten the progress of the movement.

#### Forest Protection

The first great essential is better, and still better, protection of the forest against its great natural enemies—fire insects and disease. In years past, our forest fire losses have been simply incalculable. In every province, enormous damage has been done, and our timber stands have been reduced to a mere fraction of what they once were and may still be again, with proper care. Full credit must be given the various forest protective agencies, public and private, for their splendid efforts. However, they have been working under tremendous handicaps, with inadequate funds everywhere, and with insufficient and inadequately paid personnel, and not always free from the blighting influence of politics. Our annual statistics of forest fire losses show only too clearly that, taking the country as a whole, we are still a long way from the goal of reasonably adequate protection from forest fires. The same is still more true with regard to losses caused by forest insects and fungous diseases, which destroy even more timber every year than do the fires. The Entomological Branch is doing splendid work in the investigation of forest insects, but only to a very limited extent have actual control measures yet been found practicable. In tree diseases, practically nothing is being done.

#### Silvicultural Practice

After undertaking to save what is left of our forest from useless destruction, particularly by fire, the prime consideration should be to ensure that cut-over lands are left in a condition to produce another crop of timber. This means the general practice of scientific forestry, and will require the services of greatly increased staffs of thoroughly trained and experienced foresters.

Rigid adherence to a diameter limit in regulating cutting operations is now generally accepted as being inadequate to provide for a future crop of valuable species. The lack of any regulation may be observed in the southern states, where, according to government reports, 5,000 sawmills must

go out of business in the next three years for lack of raw material.

If the future of our industrial development is to be safeguarded, as it must be, we shall have to reinvest a materially larger part of our forest revenues in the forest to ensure its perpetuation. This principle is fully recognized in European forestry practice. We must get away from the idea of seeking only the greatest immediate profit, with little or no conscious attempt to provide for the time when virgin supplies will be exhausted.

In our mixed forests, such as provide the bulk of our pulpwood, present methods of cutting tend to convert cut-over areas more and more into hardwood forests, decreasingly valuable for pulpwood purposes. Incidentally, the problem of transportation of hardwoods must be solved, so that these species may be utilized on the more remote areas, thus giving the young coniferous growth a reasonable chance to grow to maturity. Hardwoods do not float for great distances, so that these species are now largely left standing to crowd out their more valuable coniferous neighbors.

Conditions vary so widely that no general rules can be laid down as to what procedure should be followed in the regulation of cutting operations. A great deal of research in the forest is still necessary, and in this the Commission of Conservation has made a beginning, as have also a number of the other forestry organizations throughout the country. We have specialized particularly in the study of conditions of natural regeneration upon cut-over pulpwood lands in co-operation with a number of the leading pulp and paper companies. The object of this work is to build up gradually a body of specific information to serve, in part, as a foundation for the future management of such areas along correct lines.

There has been much discussion of the necessity for forest planting. Unquestionably, a great deal of planting must be done, particularly upon the more accessible lands which have been devastated by repeated fires. This, however, is a laborious, slow and costly process, and should not by any means be regarded as a general substitute for the practice of forestry upon the great bulk of our forest area. Nature will accomplish wonders in the restocking of our cut-over forests, providing we work in harmony with her laws instead of disregarding them.

It all comes down to a question of having adequate staffs of properly trained and thoroughly experienced for-

esters, who know all that is to be known about the behaviour of our tree species under the varying conditions, and are in a position to decide in each particular case what method of treatment should be adopted to secure the desired results. This is an age of specialists, but the specialist in forestry has, for the most part, yet to make his mark upon the actual practice of his profession in Canada. This profession is a new one on this continent, though it is thoroughly well established and greatly respected in Europe. In its recognition here lies the future of our forest industries.

#### Appeal of Forest Conservation

In the final analysis, the practical working out of efficient forest management, or of any other policy of conservation, is largely in the hands of the individual citizen. Any government department or commission that fails to enlist his sympathy and active support is doomed to an extremely limited measure of success, notwithstanding that governments, as the custodians of Crown lands, are directly and primarily responsible for their proper handling, as well as for the determination of public policy with regard to all lands. In regard to forest conservation, the organization of public support is facilitated by the fact that the question directly affects the pocketbook of practically every member of the community. I do not know of any other single economic problem that has such wide ramifications.

It affects every man who wants to build, buy, or rent a house—or furnish a home. The rising cost of lumber has been a decided factor in retarding the building of houses to relieve the housing shortage that has contributed so largely to the dissatisfaction and unrest that are current to-day. It affects every man who buys advertising space. It affects every man who has a dollar invested in forest industries, and our total capital investments in these enterprises approach the stupendous sum of \$400,000,000. Finally, it affects every man employed in such industries, of whom there are more than 80,000, with many additional thousands employed in wood-working establishments of one form or another that are directly dependent upon forest production. There is no question as to the motive behind forest conservation. It is a question purely of hard business sense—not of sentiment. It concerns not only the lumbering and the pulp and paper industries, but is of vital interest to the entire community.

## Coal Supply More Plentiful in 1920

Conditions Better Than in 1919, but Production in United States, and Canadian Imports from United States, Not so Great as Previously—Canadian Output Shows Gradual Increase—Coal Bulletin May be Issued by Government

By S. J. COOK, B.A., A.I.C.

Chief, Mining, Metallurgical and Chemical Division, Dominion Bureau of Statistics, Ottawa

**D**ESPITE much loose talk to the contrary, the Canadian coal supply situation does not appear alarming, although prices continue high, and no relief may be expected as yet.

#### U. S. Production

The production of bituminous coal in the United States during the 199 working days ending August 21, 1920, and for the corresponding periods in preceding years, according to figures supplied by the United States Geological Survey, was as follows (in net tons):—

1917 -----	352,011,000
1918 -----	375,395,000
1919 -----	287,270,000
1920 -----	335,967,000

The year 1920, therefore, at August 21, is sixteen million tons behind 1917, and about thirty-nine and a half million tons

behind 1918, but is forty-eight and two-thirds million tons ahead of 1919. In this connection it is pointed out that production during 1918 exceeded consumption and provided for a net addition to consumers' stocks by the end of the year of approximately 30,000,000 tons. In 1919 the condition was reversed; consumption exceeded production and there was a net draft on stocks of perhaps 40,000,000 tons for the year.

United States production of anthracite shows an output of \$55,712,000 net tons for the calendar year up to August 21, 1920, compared with 52,678,000 for the same period during the preceding year.

#### Coal Imported Into Canada

During the past five years Canada has imported from the United States bituminous coal in quantities varying from nine million tons in 1915 to seventeen and one-quarter million tons

in 1918. Anthracite imports varied during the same years from four millions to five and one-third.

Central Ontario has received, up to June 30, 1920, 99 per cent. of the average amount of anthracite coal received during the same six months in the three preceding years; and 106 per cent. of the amount of anthracite received during the same period in 1919. The bituminous coal supply is not as good. Receipts this year constitute only 89 per cent. of the average amount for the same six months of the three-year period, but when taken against last year's receipts, 1920 shows an increase of 9 per cent. over 1919. Quebec has received this year 110 per cent. of the average amount of anthracite obtained during the same six months' period of three years preceding and 119 per cent. of the amount brought in during the six months of 1919. Receipts of bituminous are lower, the 1920 figures being 65 per cent. of the three years' average, and 74 per cent. of 1919 imports.

Total coal imports for Canada show that this year's receipts of anthracite to June 30 are 101 per cent. of the three years' average, and 107 per cent. of last year's receipts during the same six months. Bituminous coal imports into Canada up to June 30 have fallen this year to 80 per cent. of the average for the same period during the three preceding years, but they still add up to 97 per cent. of the receipts during the first six months last year.

#### Shortage, But No Cause for Alarm

These data will serve to inform the reader that, while there is undoubtedly a shortage of coal, it is not such as to cause undue alarm. There seems no reason why United States production should not continue on the same scale as at present, and with the return of the United States railways to private control transportation facilities will probably be considerably augmented so that the losses due to car shortage may be reduced, and the consequent increased distribution will make for general relief.

Canadians will never be content to be so absolutely dependent on the United States miner, and a policy looking to the better development of Canada's coal fields would be acclaimed by both miners and consumers. Co-ordination of effort with the elimination of obsolete methods and unnecessary local competition in our coal-mining districts would do much towards Canada's coal problem. But governments, capitalists and miners have all much progress yet to make before the necessary spirit of unity will be found pervading all.

#### Canadian Output

Coal mining in Canada has been subject to many vicissitudes, and yet, in spite of all, the output from Canadian mines during the first three months of the present year was nearly half a million tons in excess of the output during the same three months of 1919, and if production is maintained at the same rate during the remainder of the year, the Canadian output of each coal-producing province is recorded. Comparative record at fifteen and a half million tons.

Canadian output figures are given below for the years 1913-1919 inclusive, and for the three years 1917-18-19 the output of each coal-producing province is recorded. Comparative figures for the first three months of the current year and last year are also given. All quantities are given in short tons:—

Canadian Output of Coal			
	1913	1914	1915
	15,532,878	13,988,743	13,480,196
	14,815,703		
	1917	1918	1919
Nova Scotia	6,345,335	5,836,370	5,790,196
New Brunswick	189,668	266,585	166,377
Saskatchewan	360,623	348,988	379,347
Alberta	4,873,637	6,126,443	4,950,310
British Columbia	2,660,834	2,879,099	2,649,516
Yukon	5,264	2,900	-----
Canada	14,435,361	15,460,385	13,935,745

3 Months—Jan.-Mar.  
1919 1920

Nova Scotia	1,448,588	1,593,170
New Brunswick	52,813	32,444
Saskatchewan	80,837	93,563
Alberta	1,416,578	1,732,330
British Columbia	736,748	*675,016
Canada	3,735,564	4,126,523

\* Incomplete.

#### A Coal Supply Bulletin

To meet the very evident need for data regarding output, exports, imports and movements of coal, and in order that the general public may be kept accurately informed regarding Canada's coal supply, it is proposed to issue from the Mining, Metallurgical and Chemical Division of the Dominion Bureau of Statistics a "Coal Supply Bulletin" each month, giving all the available statistics relating to the production and distribution of Canadian coal, and the importation and distribution in Canada of coal from the United States. Owing, however, to the present extremely high costs of printing, the first number of this bulletin, which it was proposed to publish at this time, has been postponed, as changes are now being made in the multigraph equipment of the bureau, which, when completed, will permit of the printing promptly and at greatly reduced cost of such publications as the one proposed.

#### The Collection of Coal Statistics

During the recent administration of fuel control in Canada under C. A. Magrath, the necessity of maintaining accurate records of all data relating to coal production in this country and imports from the United States in readily available tabular form was so emphasized that the principal records inaugurated under that regime were merged with those previously compiled in the Dominion Bureau of Statistics, and when the mining division of the bureau was established last year, with the writer in charge, the collection of adequate records of coal supply was one of the first matters given attention. The whole of this work is now on a permanent basis, and the several government departments interested are being served through the co-ordination of provincial and Dominion effort, made possible by the bureau. Thus, Coal Supply Bulletin, compiled each month from the wealth of data available in the Mining, Metallurgical and Chemical Division of the bureau, will provide a new service to the public, and will enable the bureau to keep its many correspondents on the subject of coal promptly and fully informed on the subject. The critical surveys made from time to time will serve to review and interpret the data recorded.

#### Organization of Work

Output and disposition of coal figures are obtained in the bureau through the co-operative assistance of the several provincial departments administering the mining laws in the coal-producing provinces. This scheme, inaugurated in January, 1920, provides for the collection of production data from the mine operators by provincial officers, thus ensuring the highest degree of reliability in the data collected. Returns are obtained in duplicate, and one copy, after visit by the provincial officers, is forwarded to Ottawa for compilation with the data from the other provinces by the trained staff of the Mining Division. This plan has resulted favorably, not the least of the advantage gained going to the mine operator, who now completes one form each month, knowing that he will not be required to do the same work over several times more for other government departments. The present arrangements are working so smoothly and well that Coal Supply Bulletin will contain output figures complete for the month preceding its date of publication.

Imports of coal into Canada, and exports therefrom, are supplied to the bureau twice a month through the courtesy of the Department of Customs. These figures are absolutely up to date and all coal coming into Canada from the United States is shown by quantities and kinds for each port of entry. Exports of coal produced in Canada are also shown by quantities shipped through each port of exit.

# Opening of Markets Featured Grain Trade in 1920\*

Action Taken by Government After Careful Investigation—Enabling Act Gives Government Power to Interfere if Thought Desirable—State Control Has Proved Unsatisfactory—Grain Exchange is Meeting Place for Buyer and Seller

By J. E. BOTTERELL

President, Winnipeg Grain Exchange, 1919-20

AT the last three annual meetings of this exchange my predecessors discussed the effects of the war upon the grain trade. I desire to continue the story and to note how the grain trade has been affected during the past year.

Let me say, to begin with, that the Wheat Board, like the Board of Grain Supervisors, did not in any way interfere with the marketing of coarse grains, with the result that the grain trade marketed the coarse grains of the Dominion without any assistance from the government. So far as the past year is concerned, the grain trade were able to market the coarse grains of the Dominion successfully. They sold flax, barley, oats and rye both within the domestic market and in the markets of the world at prices higher than had ever been paid for these grains in the history of the Dominion, and they did so not only without assistance from the government bodies, but also in spite of considerable difficulties arising out of the conditions of ocean and lake tonnage and the international rate of exchange. The grain trade may rightly claim that their methods have been vindicated by their success in the marketing of coarse grains.

## Open Trading

Shortly after the last annual meeting, the council of the exchange took up with the government the matter of the settlement of the trades that had been made while the market was open last year, and that had been left outstanding. They took it up with the government because the Wheat Board declined to admit any liability whatever. It was not an easy matter, and the negotiations were long and expensive. I am glad to be able to say, however, that the government decided that as it had opened and closed the market, and as it had commandeered the wheat and paid firms holding the wheat at prices below what they had given for the wheat, the government recognized their responsibility and made arrangements to pay to the firms concerned amounts covering their actual losses. All is well that ends well, and while we may feel that the negotiations were perhaps unduly protracted and expensive, still we are grateful to the government for recognizing the validity of contracts legitimately made.

## Meteorological Service

Believing that the government would not long continue to market wheat, and that commercial methods would sooner or later be restored, your council decided to endeavor to improve the facilities and equipment of the exchange so as to bring it in every respect up to date. With this in view, the council took up with the Department of Marine and Fisheries the matter of a Meteorological service in Winnipeg. The result, as you know, was that the government is now operating a Meteorological office within this building that is furnishing us with the weather map and with a daily bulletin, and that it is proceeding to develop this work in a most satisfactory way. I am sure that every member of the association recognizes the importance to the grain trade of having a good meteorological service within the building, and I am

\*An address before the annual meeting of the Winnipeg Grain Exchange, September 8, 1920. This was Mr. Botterell's address as retiring president. N. L. Leach, vice-president and general manager of the National Elevator Co., was elected president for 1920-21, and C. H. Leaman, manager of the Northern Elevator Co., was elected vice-president.

sure that the work done by that office will grow in importance and in the appreciation of the public of the western provinces.

## Sample Markets

In regard to our facilities in general, we are very much handicapped because this building is not, under present conditions, adequate to the needs of the grain trade in Winnipeg. There are not offices enough in this building to accommodate all those who desire to rent offices in it. While we recognize how expensive building operations are at the present time, and while we have no desire to put any undue burden upon the Traders' Building Association, still we cannot but recognize that it would be most desirable to have sufficient accommodation for all engaged in the grain trade who desire to rent offices in the building, to give our members sufficient accommodation, and at the same time to provide the exchange as an association with all the facilities that it needs.

As you know, the policy of the government before the outbreak of the war provided for sample trading in grain. The Canada Grain Act was amended with this end in view, and a proclamation was issued which completed the legal preliminaries necessary for the inauguration of sample trading. The war prevented this inauguration, but the time has now come when this exchange should provide all facilities for sample trading, and your council have completed the plans for this purpose. The trading room will be enlarged, separate pits have been constructed, one for wheat trading and the other for trading in coarse grains, all the paraphernalia necessary has been purchased, a by-law has been passed, warehouse receipts for use by private terminal elevators have been devised and approved by the Board of Grain Commissioners, forms for registration of these receipts have been prepared, and, in a word, facilities for sample trading will be available within two or three weeks.

It is not necessary that I should do more than point out that no one is compelled to trade by sample, and that trading by grade will be continued as before. Probably, for many years to come, the bulk of trading in this market will be done on grade, but since trading by sample is now legal, all the facilities required for such trading will be available in this exchange, and I for one expect to see these facilities made use of more and more as time goes on.

## Opening the Markets

The most important event that has taken place since our last meeting was of course the reopening of the wheat market. After a very mature consideration of the matter from every point of view, the government decided to restore free and open trading of wheat on the exchanges, and this market was opened on the 18th of August.

The government passed a bill which enables it at any time, should conditions render such a step necessary, to resume control and reappoint the Canadian Wheat Board.

We, of course, in the trade welcomed the opening of the market and we did so not merely because our business has been affected by the long continued method of handling wheat, but also because we believe that all experience justifies our confidence that government trading is not as efficient and economical as private trading.

We do not believe, for instance, that the government's success in trading in wheat during the war years shows any superiority whatever to the success of the grain trade in

marketing coarse grains in spite of the fact that conditions in regard to transportation and international exchange made all private trading especially difficult.

And we cannot but believe that it is a significant thing that all of the allied countries' governments have been eager to free trade and commerce in every branch from the forms of control created during the war years. It would not be difficult to show that in the allied countries that have had a leading place in trade and commerce during the last fifty or hundred years, government control of business has not justified itself. Whether you look to England or to the United States or to Belgium, or to France or to Italy, you find the same general result, and you find it in regard to practically all forms of government trading. You find it in regard to railways, ships, coal mines, manufacturing and farm produce. It is the same general experience throughout all these countries, and in regard to all these things, namely, the hastening of decontrol, because the experience of government operations in all these lines during the war years has not been justified by the results.

We, therefore, welcomed the decontrol of wheat, not only because it affects our business, but also and mainly because we believe that such decontrol is in the public interest.

#### Government Has Power to Act

It is true that the government retains power to resume control should conditions require this step. The market has been open now since the 18th of August, and there is no sign anywhere so far as our experience in the market is concerned of impending trouble. The fact is that so far the market has acted admirably, and what is particularly encouraging is this, that enquiries for Canadian wheat never were so numerous and never came from such a large area. It is not, I think, sufficiently realized as yet that the market for our western wheat this year is larger than it has ever been in the history of this Dominion. Besides our domestic market in our own Dominion, we have on this side of the ocean the American market wide open to Canadian wheat without duty and without embargo, and we have this for the first time in our history, and in Europe we have a wider market than ever, and enquiries are coming to us from every country in Europe that needs wheat, and most of them do. That there will be difficulties in marketing of wheat this year goes without saying. These difficulties will arise from two sources—one is the financial position generally, and the other is the international rate of exchange—but it is difficult to see how government trading would avoid these difficulties any more than private trading, and it is also difficult to see why, with the demand for wheat as it is and with the world crop anything but abundant, all such difficulties should not be surmounted by the trade, and the wheat of western Canada marketed at the highest prices available.

#### Market is World-Wide

It should not be forgotten that the general price level of Canadian wheat is fixed by the conditions of demand and supply the world over. Russia is not likely to export any considerable volume of wheat during the next twelve months. The Balkan States will have very little to ship. Australia can ship no wheat until she grows her new crop. Argentine is shipped out, and the important countries of Europe must depend for their important supplies for months to come upon North America. There is a large crop in the United States of winter wheat, but so far as hard spring wheat of high milling value is concerned Canada has practically no competition to meet.

Although the railways may not have been able to develop their equipment during the war years, they are upon the whole in a healthy condition; certainly they are in much better shape than the railways of the United States. So far as the world demand and world supply go, and so far as transportation conditions both in Canada and on the ocean go, there are no difficulties in sight in the way of a most successful marketing of our wheat by private trading, and from this point of view there can arise no condition which would justify the resumption of control.

#### Financing Was Big Problem

The financial condition as stated may lead to some trouble. Personally, however, I have every confidence that the banks of this country will be able to finance our wheat, and that they will not adopt a policy of forcing undue liquidation. The banks, like the rest of us, recognize the importance to this western country of securing every cent that the world conditions justify for our wheat, and the bankers are not so short-sighted as to adopt such a policy as forcing sales as would involve this whole country in a serious loss. It has been hinted that the banks will force liquidation of wheat and will not permit prices to go beyond a certain unstated figure. Personally, I do not believe there is any iota of truth in this statement, and so far as the international rate of exchange is concerned, it is not an insoluble difficulty, and as a matter of fact since the market opened we have been exporting wheat to Europe, and since 1916, when government took control of the trading in wheat, private firms have been able to export the surplus coarse grains of Canada in spite of all the financial difficulties that arose.

There is one clause in the enabling bill, to which, I think, I should call particular attention, that is clause 2, section 5, of bill 206, entitled "An Act respecting the Canadian Wheat Board." The clause reads: "Should a board be appointed under this act after trading in the wheat crop of 1920 has commenced, the board shall have power to adjust and make payments from the funds of the board in respect to actual losses incurred by reason of the bringing into effect of this act: Provided that before payments are made such adjustment and payments are approved by the governor-in-council."

The clause was inserted by the government at the request of representatives of the Grain Exchange in order to prevent a situation arising such as arose last year; and if an enabling act was necessary at all, we in the grain trade should recognize that by inserting this clause the government created a means of avoiding such troubles as we had last year.

#### The New By-Law

The opening of the market under this enabling bill presented a problem to the association of some difficulty. Finally, after much consideration, it was decided to enact a new by-law, a by-law which would hold good until the end of the coming year. Under this by-law the association has endowed its governing body, the council, with powers more absolute than have been given by any exchange on this continent to its governing board. Under this by-law the council can, if necessary, get full and exact knowledge of all trading in all grains through the year, can set a limit to the amount of trading done by any member or any client, can withdraw the facilities for future trading, and can not only close the market in this way but also put into effect terms of settlement.

We in the grain trade know from experience that a modern grain exchange simply provides facilities for grain trading. It provides a meeting-place for buyers and sellers, a meeting-place in which all who are interested in the financing, the transporting, warehousing, the marketing and the milling of grain can find at their disposal all the facilities that the modern mind has created for the quick and economical handling of business, and we know also from experience that in this exchange we have a machinery available for the marketing of grain that has been so tested and so improved, that to-day grain is marketed at a lower percentage of profit than any other produce in the world. We, too, know just what the financing of grain means; we know the requirements of credits; we know how necessary future trading is as a part of the safe and sound financing of trading; we know that without such future trading the marketing of grain could not be done as economically as it is; and we know at the same time how prevalent are misunderstandings of our business, and how too often it is identified with gambling and therefore exposed to most irrelevant criticisms.

It is difficult to get some people to realize that years of competition have tested the integrity of our members, and that years of competition within our own market, and between this market and others, have led to the creation of a method of marketing grain that not only has no superior but has no equal in the modern commercial world.

**Recent Developments**

Prince Edward Island has during the past few years developed an extensive fur-raising industry. E. H. Raynor, one of the leading fur ranchers on the Island, recently made a trip to the chief trading centres in the United States and Canada, and in an article in the *Prince Edward Island Agriculturist* of September 25 reviewed the situation as follows:—

"In the first place, it is generally known that the fur trade has experienced a very sharp reaction in market conditions which has caused a big slump in the prices of nearly all raw furs. Recent conferences with the leading fur dealers in Canada and the United States have convinced me that the present unsatisfactory conditions in the fur trade are caused largely by speculators who boosted the prices of furs last season away beyond their normal value. Most of the trading was done among dealers who in turn sold to other dealers or consigned their merchandise to the large auction houses with high reserve bids; and, consequently, manufacturers and retail merchants declined to purchase large quantities of merchandise on which prices were so high that they could not figure to sell to the consumer after the cost of manufacture and the retail profit were added to the high price of the raw article.

"Large stocks of raw furs were thus carried from one auction sale to the next; and, in the meantime, fresh goods kept coming on the market until enormous quantities of merchandise were piled up at exceedingly high prices, and upon which millions of dollars were borrowed from the banks to enable the owners to carry it.

**FUR INDUSTRY HAS EXPANDED RAPIDLY**

**Large Drop in Prices This Year, However—London Formerly Dominated Market, But Auction Sales Have Now Been Established on This Side**

**T**HE fur trade has been an integral part of Canada's industry since the earliest days of the French regime, when it was a monopoly of the proprietary companies. Always a source of profit, the development of the last few years, the growth of the demand for furs, and the high prices they have commanded, have increased its value to Canada very greatly. The value of the present annual production has been estimated roughly at twenty million dollars.

Until comparatively recently the operations of the trade in Canada were in the main confined to the actual trapping of the fur-bearing animals. Most of the furs were exported in an undressed state to London or the United States, either for sale at public auctions or consigned to dealers in those places. A certain proportion were dressed and manufactured in Canada for home consumption.

**Exports Have Grown Rapidly**

The figures of exports show changes which the war caused in the world organization of the industry. Extracts from the statistics of the fiscal years ending March 31, 1914, 1918 and 1919 are as follows:—

	UNDRESSED FURS.		
	1914.	1918.	1919.
To England . . . .	3,000,000	1,600,000	3,700,000
To United States	2,100,000	6,300,000	9,600,000
Total exports . . .	5,500,000	8,000,000	13,500,000
Total imports . . .	2,200,000	2,900,000	3,300,000

In the fiscal year 1914 England received the greater part of our fur exports. By 1918 she was importing 20 per cent. only, 78 per cent. going to the United States. The percentages for 1919 were 27 and 71 respectively, showing that the activity of the English industry grew steadily. The total value of fur exports in 1919, as compared to 1918, increased five and a half million dollars.

**Auctions Established Here**

Prior to 1915 London was the only place in the world where furs were sold at public auction. Since the first sale was held there by the Hudson's Bay Company in 1671, the English industry grew steadily until at the outbreak of the war the London market dominated the world's fur trade. The war changed the situation entirely, and in 1915 sales were commenced at St. Louis, and in 1917 at New York. This form of international buying and selling of furs at auction has been found to be the most economical and effective method of distribution yet developed.

The auction sales which have been inaugurated at Montreal and will probably be held three times a year—winter, spring and fall—have changed the Canadian fur trade outlook considerably. A Canadian market has been provided to which Canadian trappers and dealers can send their furs. With Russian furs of the market, Canadian furs rank higher in the aggregate than any in the world. Their presence in quantity at an auction sale is counted on to attract the most important of the world's buyers and to ensure a high level of prices, which is all that is needed to bring furs to Canada from all parts of the world and to establish Montreal as an international centre for this trade.

**Prices Have Slumped**

"When the money market began to tighten, shortly after the spring auction sales, dealers found themselves with large stocks of high-priced fur on hand, with the banks calling their loans and with no outlet for the fur, except at a big discount below cost. The result was that many of the smaller houses who had come into the business on the rising fur market found themselves face to face with financial ruin, and gradually have been forced to the wall. A large number of commercial failures have added to the difficulties of the situation, as stocks of raw furs held by bankrupted concerns were put on the market at any price they would realize; which has had a demoralizing effect on the prices of all kinds of fur.

"To aggravate the situation, the operators in the large manufacturing houses in New York walked out on strike last spring, and up to this time the strike has not been settled. Little or no fur has been manufactured in a city which is perhaps the greatest fur-manufacturing centre in the world. It is hoped by the trade that the strike will be settled by October first; and, if so, there will be a resumption of business in raw furs, but upon a much lower level of prices than obtained a year ago, declines in some cases running from 50 to 75 per cent.

"For the reasons given above, the Canadian and American fur auction houses decided not to hold fall sales, as it was considered very poor policy to attempt to force large quantities of high-priced raw furs on the market under present unsatisfactory conditions, and with bank credits severely curtailed. To feed the market, such quantities of furs as it can consume without forcing was felt to be the only method by which prices could be stabilized and satisfactory conditions restored."

**FISH FRY DISTRIBUTED**

Fish hatcheries operated by the fisheries branch, Department of Marine and Fisheries, Ottawa, have distributed in 1920 three-fourths of a billion fry in the various provinces throughout the Dominion. The greatest distribution took place in the province of Ontario, the number of fry distributed being approximately four hundred million.

# Packers' Output Reduced in Past Year

Feed Shortage Forced Marketing in Early Months—Followed by Price Decline and Reduction in Number of Stock Sold—Exports of Packing House Products Have Fallen Off

By S. E. TODD

Secretary, Industrial and Development Council of Canadian Meat Packers

IN round figures the capital invested in the meat packing industry in Canada is \$90,000,000. The latest official returns, which are for 1918, give the total at \$87,000,000, with a yearly payroll of \$12,000,000 for 12,000 employees. Some seventy-eight firms are reported operating. The majority of these are by no means large, for out of the seventy-eight only twenty-four have an annual turnover exceeding \$300,000.

A feature of the industry is the largeness of the turnover, in proportion to capital. Sales may run from ten to sixteen times the capital employed in any one year. It is this which enables the packing industry to work on a strikingly narrow margin of profit.

## Dependent Upon Number of Livestock

Packing plants, more specifically than many other industries, are restricted in their operations by the fluctuations in the supply of their raw material which, being live animals, cannot be held from year to year to equalize the flow. An understanding of the livestock supply available is, therefore, the key to a year's work in the packing industry. The past twelve months have been influenced by exceptional circumstances which are touched upon later.

In the export bacon trade, in which Canada has established a high reputation abroad, there has been not only the factor of uncertainty of supply from the farm, but an extremely limiting influence in the controlled price set for the export article in Great Britain. At the close of the year it is causing as much anxiety as at the beginning. In the domestic meat trade the figures given below show an increase in the slaughtering of beef cattle. This, however, is somewhat offset by the lower weights of the animals killed. Had the live weight and yield of the animals remained what they were in 1917, it is estimated that roundly 40,000 fewer cattle would in 1920 have supplied the same quantity of meat. Packers state that until the quality of beef is raised, they cannot expect to secure a large export trade.

## Production Curtailed This Year

Nineteen-twenty was a year which will stand out in the annals of our livestock. It was remarkable for an acute shortage of grass and feeding stuffs in the west, which, combined with bad weather in the late spring, resulted in a mortality variously estimated from ten to twenty per cent. of the western cattle. This feed shortage, with consequent high prices, of all grains, caused farmers to take stock of the hog situation last fall. Then came government control of domestic prices for pork products, accompanied by government control of prices for export bacon. This combination of conditions brought about a stampede to reduce breeding sows to a minimum in the west and to a marked extent also in Ontario. Thus both lines of production, beef and pork, were severely curtailed.

Net reductions for the year, according to the returns of the Dominion Bureau of Statistics, were:—

Cattle (not including milch cows) .....	590,000
Milch cows .....	18,000
Hogs .....	523,000

The milch cow figures indicate more particularly a trend in the dairy industry; from the point of view of meat production they form a minor part of the supplies to abattoirs. A more gratifying feature of the year's livestock history is a net increase of 28,000 in the numbers of sheep kept on

farms. It is interesting to observe that, for the first time, sheep outnumber hogs in the Dominion.

## Price Trend Was Downward

These fluctuations in supply naturally had their immediate effect in the prices for stock. There was the inevitable quick drop in price when farmers started rushing their stock to market. Then came the inevitable reaction with high prices for the remaining animals which had any quality whatever to recommend them. However, a downward turn was taken in the late summer before the record figures, made in August, 1919, were reached.

CHART A

The following table shows the number of livestock (meat producing) in the Dominion in the last three years:—

	1918	1919	1920
Hogs .....	4,289,682	4,040,070	3,516,678
Milch cows .....	3,538,600	3,547,437	3,530,238
Other cattle .....	6,507,267	6,536,574	5,947,142
Sheep .....	3,052,748	3,421,958	3,720,783

The accompanying charts "A" and "B" show the movement in numbers each year since 1911.

The total marketings of livestock on public stockyards are shown for three full years, with the total for ten months of 1920, in the following table of receipts:—

TABLE "C"—RECEIPTS OF LIVESTOCK AT PRINCIPAL MARKETS

	CATTLE			
	1917	1918	1919	1920 (10 months)
Toronto .....	292,972	302,856	371,783	247,545
Montreal—(Pt. St. Ch.) .....	57,198	62,762	68,217	36,588

	777,172	883,025	1,082,090	647,864

*In one of these four men, perhaps, you will find a man whose position and income were much the same as yours*

# What happens to the income of men ?

**F**OUR average business men, typical of thousands of others who enrol for the Modern Business Course and Service of the Alexander Hamilton Institute—what happens to the incomes and the business positions of such men when they add an all-round business training to their practical business experience.

The answer to that question need not be left to guesswork. The Institute has the record of the progress of these four men—and several hundred like them—in their own handwriting.

### *These are the facts*

**A**N Assistant Cashier was earning \$3,000 a year at the time of his enrolment with the Institute; today he is Vice President and his salary is \$7,200.

A Purchasing Agent was earning \$4,000; today he is General Manager, and his salary is \$12,000.

A Western Manager's income when he enrolled was \$4,160 a year; and this year, as Sales Manager, he will earn \$20,000.

A chief clerk was earning \$2,500 when he decided to shorten his road to success by the Institute's help; today he is a department head in an important bank, and his income is \$7,000.

The combined earning power of these men has increased more than 300%; and every one of them states in his own handwriting that the Alexander Hamilton Institute has

been one of the most important, if not the most important, factors in his success.

*"Would you advise other ambitious men to enrol?"*

**W**E asked each one of them to answer that question in complete frankness.

"By all means," the Vice-President answered, "because the knowledge one obtains is practical and not theoretical. Especially does this apply to men who have not had long years of schooling in youth."

"Would advise to enrol at once," the General Manager answered. "It is a real help in understanding and solving everyday problems."

"Yes," said the Department Head, "because, other things being equal, advancement depends upon a broad knowledge of business facts and a firm grasp of business principles."

"Yes," said the Sales Manager, "because I feel that the time I invested in the Course was the best investment I ever made."

### *The result of training*

**T**O such men increased earning power comes as a matter of course; neither they nor the Institute think in terms of money.

They think in terms of achievement; the money takes care of itself.

Yet in days like these when the cost of living is a problem to every ambitious man, this fact, which many years' experience in training men for success has proved beyond a doubt, should be emphasized—that increased income follows business training as inevitably as day follows night.

### *Advisory Council*

**T**HE Alexander Hamilton Institute was established to teach business as a profession, as law schools

teach law or medical schools teach medicine.

With the help of leaders in the various departments of business—sales, accounting, factory and office management, costs, merchandising, advertising, transportation, corporation finance—its Course was prepared.

### *"Forging Ahead in Business"*

**F**OR your convenience all the facts you want are published in a 116-page book issued by the Institute entitled "Forging Ahead in Business." It tells just what the Modern Business Course and Service is, how it works and exactly what it has done for men whose problems were like your own.

Fill in the coupon, mail it, and your copy of "Forging Ahead in Business" will come at once.

Sales on Public Yards

An analysis of the sales on our public yards for several years past shows that the proportion taken by packers for slaughter at the inspected establishments has been rapidly growing. Below are the numbers slaughtered for representative years since 1909:—

Year ended	Cattle No.	Sheep	Swine No.
March 31.			
1909	298,241	191,792	1,532,796
1913	450,390	455,647	1,607,741
1915	530,425	447,173	2,598,338
1916	542,154	403,147	2,363,693
1918	739,085	336,987	2,129,682
1919	887,773	397,961	2,333,354
1920	961,613	600,153	2,179,391
April to Oct., 1920	431,236	280,320	726,960

Thus hog slaughtering reached the peak during the first year of the war demand and then gradually dropped. Cattle

and sheep slaughtering, on the contrary, have steadily risen year by year and touched the highest point in 1920. The greater part of the purchases for slaughter takes place on the public stockyards. The following table sets out the number bought to the end of October at the five leading markets of the Dominion (the two Montreal yards being combined):—

	Cattle	Calves	Hogs	Sheep	Lambs
Toronto	181,954	32,948	132,346	71,613	78,094
Montreal	62,593	89,768	99,820	19,922	72,859
Winnipeg	88,908	10,644	97,904	29,035	.....
Calgary	35,106	249	22,929	10,933	871
Edmonton	12,997	2,474	19,066	3,695	67
Totals	381,558	136,083	372,056	135,198	151,891

The average prices by months for Toronto and Winnipeg are typical for the whole Dominion. Four representative classes are given below (being prices per 100 lb.):—

TORONTO

1920	Steers		Hogs, selects	Lambs, good
	(over 1,000 lbs.)	Butcher cattle		
January	\$12.98	\$10.60	\$18.37	\$18.47
February	12.69	9.81	19.14	19.47
March	13.13	10.54	19.62	19.86
April	13.57	10.75	20.15	18.65
May	14.47	11.56	20.23	16.77

Totals	60,399,222	137,498,900	49,786,900

# THE CONSUMERS' GAS CO.

## OF TORONTO

The Consumers' Gas Company has a perpetual charter for the manufacture and sale of gas in the City of Toronto, Townships of York, Etobicoke, Vaughan, Markham and Scarborough.

The dividend is limited by statute to 10% on the paid-up Capital. After this dividend has been earned, and provision made for repairs and renewals, the Company must reduce the price of gas. The prices have gradually and voluntarily been reduced, during the seventy-two years of the Company's history, from five dollars per thousand cubic feet to one dollar and twenty-five cents. Moreover, the Company has acquired one of the finest and most up-to-date plants obtainable.

The output of gas for the year ended September 30, 1920, was over 5,000,000 thousand cubic feet, being approximately equal to the combined output of all the other gas companies in Canada. In addition, nearly \$475,000 worth of merchandise was sold, and about \$900,000 worth of residual products.

The present capital of the Company is \$5,360,700. There is a reserve fund of \$3,346,982.09, and a plant renewal fund of \$1,691,090.27. Assets total \$12,293,264.98. Profits for the past fiscal year were \$1,240,274.47, after providing for all expenses of management and operation.

The reserve and plant renewal funds together equal 94% of the Company's capital, which funds are invested principally in the Company's business, with no interest charges against them. This means that the Company need earn only about 5% on the money invested in order to meet its dividend requirement of 10% on the capital stock. The Company has steadily maintained its 10% dividend for forty-six years.

The Directors are, Messrs. A. W. Austin, President; Wellington Francis, K.C., Vice-President; A. H. Campbell; L. Goldman; F. Le M. Grasset, M.D.; John Hoskin, K.C., LL.D., D.C.L.; Herbert Langlois; Lieut.-Col. J. F. Michie; W. Mulock, Jr. The General Manager is Mr. Arthur Hewitt; the Secretary Mr. John J. Armstrong.

### Table Showing Increase of Company's Business

Year	Gas Output M. Cu. Ft.	No. of Meters in use	Popula- tion of District Supplied	Cons'n per Capita Cu. Ft.	Pop. per Meter	Miles of Main
1870	45,548	1,403	56,000	531	40	43
1880	140,383	3,906	75,110	1,378	19	98
1890	507,555	13,242	160,141	2,408	12	192
1900	838,215	26,982	225,000	3,326	8	251
1910	2,621,247	65,349	400,000	6,019	6	424
1920	5,127,827	122,793	575,000	8,546	4.6	601

# Growth of Canadian Manufacturers' Association

Fifty Years of Work Nearly Completed—1919 Brought Re-organization, and 1920 a Large Increase in Membership—Outline of Present Work—The Tariff, Railway and Express Rates, Fuel and Power Have Been Prominent During Past Year

By J. S. McKINNON

President, Canadian Manufacturers' Association

NINETEEN-TWENTY has been a year of steady expansion and largely increased activity for the Canadian Manufacturers' Association. Not only has the membership grown considerably, but the services rendered by the organization have been extended and its value to its members made more and more apparent.

It is now close on to fifty years since the C.M.A. was established and a year from now the association will be celebrating its golden jubilee. In the half-century interval the organization may be said to have passed through three distinct epochs. There was the period extending roughly from 1872 to 1899, when the association was composed in the main of local organizations in two or three principal industrial centres and when as a consequence its activities were largely local. Then came the period from 1899 to 1919, during which development took place along more genuinely national lines, when new and valuable services were inaugurated and when the association assumed much of its present form and purpose.

## Reorganization in 1919

A third epoch was begun in 1919. It had as its outward manifestation a reorganization of the whole associational structure, including the establishment of the office of general manager, the formation of divisions and the creation of new branches and trade sections, together with a vigorous drive for new members. This work definitely begun in 1919 was carried over into 1920 and formed an important part of the activities of the past twelve months.

As regards membership, a campaign was launched in November, 1919, having as its object the bringing in of a large number of manufacturers who for one reason or another had hitherto held aloof. This campaign was thoroughly organized; considerable effective advertising matter was prepared and distributed, and this in turn was supplemented as far as possible by a direct personal canvass. The results were gratifying. In three months approximately 600 new members were added to the roll.

The association began its fiscal year May 1, 1919, with a membership of 3,530, and closed the year with a membership of 4,061, a net gain of 531. The present membership is 4,124. The membership is thoroughly representative of the manufacturing industries of the whole country, and while Ontario claims the largest number of members, with Quebec a close second, there are strong bodies of members in the maritime provinces, the prairie provinces and British Columbia.

## Demand for Association's Services

Hand in hand with the growth of membership there has been an extension of the facilities afforded members for the solution of problems arising from day to day in their businesses. Each and every department has been strengthened during the year by the addition of assistants. Oddly enough, wherever the latter have been appointed, departmental work has increased to such an extent that the pressure, instead of being relaxed, has been increased—an excellent commentary on the value of the association to its members and an indication of the possibilities of work lying before it.

The tariff department has not only experienced an increase in the demands on its time for assistance in handling ordinary tariff matters, but has had to deal with hundreds of inquiries about the new excise taxes and other legislation affecting the taxation of manufacturers.

The transportation department has had an unusually busy year, for many important cases have come up for hear-

ing before the Railway Board in which manufacturers are vitally interested. The railway rates case, the telephone case, the express rates case are instances in point. In each instance, briefs have been prepared and arguments presented. As in the case of the tariff department, there has also been a heavy increase in the routine work of the transportation department.

The legislation department has been strengthened by the appointment of a junior solicitor, and its work has been very considerably extended. So also has the work of the commercial intelligence department, whose functions are steadily becoming of greater importance. This department has been doing a great deal to promote Canada's export trade both through the compilation of the Canadian Trade Index and the communication of information to inquirers from all parts of the world.

The trade sections department has not only given valuable assistance in organizing groups of manufacturers into sections for the closer study of problems affecting such groups, but has made a special investigation of the subject of exhibitions, particularly those in other countries, in which Canadian manufacturers might be interested as exhibitors, and has furnished useful reports on a large number of these.

## Territorial Divisions

The task of organizing territorial divisions has been continued and may now be regarded as complete. As at present constituted, the association comprises five divisions—the Maritime, taking in the three maritime provinces; the Quebec, conforming to the province of that name; the Ontario; the Prairie, covering Manitoba, Saskatchewan and Alberta; and the British Columbia. In each division a secretary is assigned to deal specially with all matters affecting the interests of the members in that territory, and he is under the direction of a divisional executive and standing committees. In this way the organization of the association is modelled on that of the Dominion and the provinces, and members enjoy the privilege of self-government in local matters.

## Annual Meeting at Coast

After an interval of ten years, the association held its 1920 annual meeting on the Pacific coast. An excursion was arranged by special train, which enabled a considerable number of members from Ontario, Quebec and the maritime provinces to attend. Advantage was taken of the tour through the western provinces to hold a series of meetings in the principal cities en route. At these meetings, spokesmen for the association explained the aims and objects of the organization, emphasized the importance of manufacturing industry to Canada and made overtures of friendliness to the agricultural population of the west. From this standpoint, the excursion did much to clear up misunderstandings and to give the people of Canada generally a better idea of the part played by manufacturing industry in building up the country.

The annual meeting itself took place on June 7, 8 and 9, at Vancouver. Apart from the discussions arising from the reports of the standing committees, which covered the work of the preceding year very thoroughly, the attention of the meeting was devoted quite largely to the subject of export trade—a theme in which we found that our members on the Pacific coast were deeply interested. Speeches delivered by Premier Oliver, Captain Robert Dollar, Trade Commissioner Bryan of Japan, and others, all emphasized the

# NEW BRUNSWICK

## The Province of Thrift, Comfort and Prosperity

### ONE WEEK FROM EUROPE

**SITUATE** at the gateway to the Atlantic, with an all-the-year-round ocean port, the nearest to Central Canada, and served by several lines of the Canadian Pacific and Canadian Government Railways, New Brunswick is the best watered of all the Provinces for its size. Eighty per cent. of its surface is still covered by forest, the major part being paper-making woods. Thus New Brunswick offers large opportunities for the use of cheap power.

Development up to the present has been small. One of the greatest falls in Eastern Canada, that of the St. John River, has never yet been utilized, and there are other lesser ones.

Recent legislation of broad scope provides for Government control of power possibilities under a Power Commission. By authority of that legislation the Government is at present initiating power development for use at three centres, St. John, Fredericton and Bathurst. The purpose of the legislation also is to remove obstacles from the path of any who seek to develop the natural powers of the Province.

Of New Brunswick it has been said, "There is not a poor man in the province." Certainly, New Brunswick possesses a large proportion of landowners among her population. The total area of the province is 27,985 square miles, with 13 million acres fit for cultivation. More than twenty-five per cent. of the land was occupied and under cultivation by 1911, and in most cases the settlers owned their own holdings of from 11 to 200 acres. New Brunswick is an undulating province, with elevations clad thickly with valuable timber and pulpwood, and with many rich valleys, especially West of St. John, where the soil is especially productive. The population in 1911 was 351,900, and is increasing rapidly.

#### FOREST RESOURCES

Over 11,300 square miles of forest areas are owned by the Provincial Government of New Brunswick. Spruce is the chief wood, but there are cedar, fir, tamarack, maple, beech, birch, ash, pop-

lar and hemlock in commercial quantities, and there is no district in all the province from which logs cannot be driven to their destination by waterways. In 1917 New Brunswick produced in lumber 593,497 feet B.M. valued at \$11,324,101 and in pulpwood the production of the province was 165,586 cords worth \$733,482. Five

important pulpwood concerns reported to the Government's request for returns from the province of New Brunswick in 1917.

#### AGRICULTURE

Mixed farming, root crop production, and dairying are important among the agricultural branches of New Brunswick industry. New Brunswick is specially adapted to dairying. It has plentiful rainfall, and little drought, which means abundant pasturage and healthy dairy herds. Root crops for herd feeding, such as turnips, mangels, and sugar beets, grow luxuriantly, and in unusually fine quality. The New Brunswick dairy industry ships products to the West Indies, Cape Breton, Newfoundland, the U. S. A. and Canadian inland provinces. In 1917 the cheese output realized \$242,561. Fruit growing is a valuable industry. The New Brunswick apple being famed. It has the advantage of a nearer point of shipment by water direct to British and West Indian ports, Europe, and S. America. New Brunswick holds the record for the American continent in the production of potatoes and root vegetables. They secure the highest prices on all markets accessible.

The coal areas of Queens and Sunbury are estimated to produce 150,000,000 tons before exhaustion. Since war began their wonderful development has played an important part in assuring industrial activity.

#### WATERPOWERS

While the potentialities of New Brunswick in water power development are far in excess of existing actual power production, there are developed powers on the St. Croix River at Cottonmill, 2,400 h.p.; Woodland, 13,200 h.p.; and Grand Falls, 8,000 h.p., and on the Margaree-davie River at St. George Falls, 3,000 h.p., with a development of 3,900 h.p. on the Aroostock River at Aroostock Falls. There are some smaller powers developed, but an 80,000 h.p. development is contemplated for the St. John River at Grand Falls, the water power at Musquash, near St. John City, is now being developed by the Province.

#### MANUFACTURING

New Brunswick's strategic location for shipping products to the markets of the world makes the province peculiarly well adapted to manufacturing. In this line of industry New Brunswick is very productive, and between 1900 and 1915 the industry had increased 80 per cent. New Brunswick's lines of manufacture include log products, cottons, foundry products, fish products, flour products, wood pulp, and iron and steel. In 1917 the output was worth \$92,417,466.

A progressive good roads programme has been carried on during the past three years, \$2,250,000.00 having been expended by the Province. Trunk roads have been made of the Province's main highways, the interest on the investment and the sinking fund being provided for through the revenue received from motor vehicle licenses.

### Financial Statement, 1919

Population, 351,900. Area, 27,985 square miles.	

This Province does not tax Income, Real Estate or Personal Property for Revenue purposes.

Agricultural production in 1919 was valued at \$80,971,000 or practically four times the total debt of the Province.

### The Provincial Cabinet

Lieutenant-Governor—His Honour the Hon. WILLIAM PUGSLEY, P.C., K.C., D.C.L., LL.D.

Premier, Hon. William E. Foster.  
Attorney-General, Hon. James P. Byrne.

Minister of Public Works, Hon. Peter J. Veniot.  
Hon. Fred. Magoe, Member of Council.

Minister of Agriculture, Hon. D. W. Mersereau.  
Provincial Secretary-Treasurer, Hon. J. E. Hetherington.

Minister of Lands and Mines, Hon. C. W. Robinson.

### Government Buildings

Fredericton, N.B.

potentialities of the great desirability of obtaining a foothold for Canadian manufacturers in the countries across the Pacific.

#### The Tariff Inquiry

Dominating the work of the association during the second half of the year was the tariff inquiry. With manufacturers all over Canada vitally interested in seeing that the policy of adequate protection for Canadian industries was maintained, it devolved upon the association to present to the members of the Tariff Commission a reasoned and informed statement on the whole issue.

The general statement of the association, which was presented to the commission at its first hearing in Winnipeg on September 14, was an elaborate document going very thoroughly into the various aspects of the argument in favor of protection and demonstrating clearly and forcibly how serious a matter it would be, not only to manufacturers and industrial workers, but to the country as a whole if any radical departure were made from present protective principles. In order to bring this statement to the attention of the Canadian people, arrangements were made for its publication as paid advertising in every daily newspaper and farm publication in the country, giving it thereby a circulation of over 2,600,000 copies. In addition, the statement was printed as a pamphlet and was widely distributed in that form.

Reviewing some of the general work of the year, reference should be made to the further prosecution of the Made-in-Canada campaign. A special effort was made to bring to the attention of architects and contractors the desirability of specifying Canadian materials in Canadian contracts, while at the same time members of the association were specially urged to employ Canadian engineers and architects when such a course was possible. Representations were also made to the Dominion and provincial governments requesting them to purchase Made-in-Canada goods for all government requirements, a course which was rendered all the more desirable and necessary by reason of the adverse state of exchange.

An important step was taken by the association during the year in becoming affiliated with the British Federation of Industries, an organization of British manufacturers in the United Kingdom, corresponding to the C.M.A. in Canada. By this arrangement the British Federation of Industries undertakes to do certain work of value to the Canadian Manufacturers' Association in the United Kingdom, while in return the Canadian Manufacturers' Association renders services to the British Federation in Canada.

#### Fuel and Power

The problem of the fuel supply, which became prominent during the war years and has since become even more acute, has been the object of much careful consideration by the association during 1920. So important was it regarded that a special committee of the executive committee was formed to deal with it and, as a result of their investigations, a great deal of valuable information has been assembled which will form a basis for future action.

Allied with the problem of fuel was that of power. This has been a subject that has been dealt with largely by the divisions. In Ontario, a special power committee has been active, their representations regarding shortage of power having much to do with the recent purchase of the private power companies by the Ontario Hydro-Electric Power Commission. In both Nova Scotia and New Brunswick, the association has been closely identified with the new provincial commissions, which are engaged in developing power in these provinces.

There were many other subjects handled by the association during the past year, the enunciation of which would fill a book. Suffice it to say that the organization has been growing steadily both in its membership and its services, and that it finishes the year in a stronger position than it ever attained before.

#### BRITISH MANUFACTURERS WATCHING CANADA

#### Fifteen Hundred Represented Here, and Visits This Year Show Increasing Interest—Recent Tendencies in British Industry

THE past year has materially strengthened Anglo-Canadian trade relations and has witnessed an increase in the volume of British Empire trade," said F. W. Field, British Government Trade Commissioner in Ontario, in an interview with a representative of *The Monetary Times*. "Canadian imports of United Kingdom manufacturers, raw materials, and semi-manufactured articles have materially increased, and Canada has always found Great Britain its best market. It is probable that during 1921 the volume of Canadian imports from the old country will show a material advance compared with the figures of 1920.

#### Many British Visitors Here

"One of the outstanding figures of the year has been the visit of many manufacturers and other business men from the United Kingdom to Canada. The number last year was greater than in any previous 12 months' period. Managing directors, export managers and sales managers from the old land have come in a large number, as well as many salesmen of United Kingdom firms. They have secured first-hand information of the requirements of this market, and have sold a satisfactory volume of goods. In addition, the visit of the members of the Imperial Press Conference and the Congress of Chambers of Commerce of the British Empire held at Toronto in September were of great value in giving such important delegations an excellent idea of the possibilities and prospects of this great Dominion. The frequent interchange of visits of business men in various parts of the Empire is very desirable.

"Canadian importers have made efforts during the past year, after satisfying their requirements in Canada as far as possible to purchase their demands in the United Kingdom or in other parts of the Empire. At the same time, buyers in the United Kingdom and in other Dominions have endeavored to purchase their requirements in Canada. Considerable business thus has been diverted from foreign countries to points within the Empire. The development of this policy will in a few years build up a substantial volume of inter-Empire trade. Each part of the British Empire will endeavor to learn what the other sections can produce and can supply.

#### Fifteen Hundred Represented Here

"More than 1,500 United Kingdom manufacturers are represented in Canada, either through branch factories, warehouses, offices or agents, and the number is being increased. The Canadian Association of British Manufacturers and their representatives, with branches at Toronto and Montreal, and the British Agents' Association at Montreal are doing good work in the interests of British trade in Canada.

"The British Government Trade Commissioner Service in this Dominion is represented by three trade commissioners, one each at Montreal, Toronto and Winnipeg. They desire to be of the greatest assistance to Canadian importers and manufacturers, and have been able to achieve definite results in the promotion of Anglo-Canadian and British Empire trade. The facilities of the British Government Trade Commissioner Service, working under the Department of Overseas Trade in London, have been offered to all the Dominions' governments. In the case of Canada, the service has been accepted at all points at which the Canadian government has not a trade commissioner. The government of India has accepted the service in its entirety.

"The history of British Commerce during the 19 months ending 31st July is a record of unexampled growth and development. A scrutiny of the export figures published for each of these 19 months shows clearly the reality of British reconstruction."

# The Land of Opportunities

for investors, farmers, miners, manufacturers

# ONTARIO

**RICH** in minerals, timber and waterpowers; with vast tracts of untilled farm land and virgin forests; producing half of Canada's manufactures, and making giant strides in industrial development, Ontario presents greater opportunities to capital and to labor than any other province in Canada.

Recent railroad construction has made accessible a vast region of natural wealth in Northern Ontario. Fortune and health await thousands in this wonderful land; sustenance will be given to millions, and Ontario faces a glorious future.

Revealing immense wealth in minerals, lumber, pulpwood, furs, and the products of what is still in great measure virgin territory, Ontario has been but scratched agriculturally and yet ranks first in productive power with Canada's finest agricultural districts. In Southern Ontario all forms of farm and garden produce, from grapes and peaches to cereals and root crops of every variety, thrive to perfection. The annual value of an Ontario fruit crop is over \$20,000,000; Spring wheat (average), \$15,300,000; Fall wheat (average), \$1,883,000. Ontario in 1918 produced over fifty per cent. of the dairy products of the Dominion to a market value of \$47,834,289. Pork products put out by five Toronto packing houses in one year run to market value of well over \$60,000,000.

Forest and pulpwood wealth is very great, there being 260,000 square miles of available forest areas, containing timber

## Industry : Integrity : Abundance

### Behind Every Ontario Bond Issue

Financial houses everywhere recognize the fact that Bond issues of the Province of Ontario can be placed among the gilt-edged securities.

The ANNUAL PRODUCT on Ontario's farms, mines, forests, industries, etc. (which under the tax power of the province secures all Ontario Government bonds), would pay off the entire direct bonded debt of the province 22 times, and do it each year.

#### A FEW SIGNIFICANT FACTS

Rural Area Assessed	25,000,000 acres
Under cultivation	14,000,000 "
Area of Forest Territory	150,000 sq. miles
Steam Railways, total length in Ontario	11,057 miles
Electric Railways	767 "
Developed water power	985,000 h.p.
Ontario's Hydro-Electric Power Commission has constructed and operates 2,533 miles of high and low transmission lines.	
Ontario has 23 cities, 139 towns, 150 villages and 553 townships.	
Assessed Value	\$2,054,000,000
Annual Production	1,152,000,000
Uncultivated Farm Land	20,000,000 acres
Available Timber	19,000,000,000 feet
Available Pulp Wood	300,000,000 cords
Undeveloped Water Powers	6,000,000 h.p.
Value of Ontario Products	\$2,012,000,000

of ever-increasing commercial value, the pine alone being the best in quality found on the American continent, and in constant demand. Hardwoods used in furniture and modern interior equipment are available, and of pulpwood, the province has resources running to 300,000,000 cords at least. Total production of timber in 1918 was 253,539,089 feet, board measure. Total revenue from woods and forests was \$2,635,681. Associated with the forest wealth of Ontario to a great extent is the available water powers, there being at least 6,000,000 h.p. within convenient reach of commercial development, and progress is rapid in the development of many water-powers by pulp and paper mills, power and light companies and the Ontario Hydro-Commission.

Mineral resources of Ontario cover practically the entire list of commercially valuable metallics and non-metallics, excepting coal and tin. Mineral production for 1918 was worth \$50,308,972, which was actually 45 per cent. of the total Dominion mineral production.

Ontario is the principal manufacturing province of Canada. There are over 15,000 factories, mines and productive enterprises involving the use of 600 workmen are employed, the annual payroll being \$285,000,000. Capital invested is well over \$1,336,000,000, the annual production being worth \$1,535,000,000. The province is one of the most attractive for the location of industries requiring proximity to natural resources, power and room, and advantageous transportation facilities.

# 1920 Crops Were Best Since 1915

Values Greater Than Ever Before—Acreages of Some Grains Were Less Than in 1919, but Average Yields Were Much Better—Decrease in Number of Horses, Cattle and Hogs, but Increase in Sheep—Detailed Figures by Provinces

CANADIAN grain crops in 1920 were the largest since the banner year 1915. Their values, owing to the higher prices for grain, are the highest up to the present time. The following figures compare the 1920 yield as estimated by the Dominion Bureau of Statistics, with the record for each class of grain:—

Grain.	Highest yield to 1920		1920 yield		1919, 1920,		1919, 1920,	
	(bushels).		(bushels).		bush. bush.		bush. bush.	
Fall wheat	29,320,600	(1915)	19,265,000				1919,	1920,
Spring wheat	364,222,000	(1915)	274,096,000				1919,	1920,
All wheat	393,542,600	(1915)	293,361,000				1919,	1920,
Oats	464,954,400	(1915)	543,058,000				1919,	1920,
Barley	77,287,240	(1918)	65,559,000				1919,	1920,
Rye	10,207,400	(1919)	12,190,000				1919,	1920,
Peas	4,313,400	(1918)	3,702,800				1919,	1920,
Beans	3,563,380	(1918)	1,435,800				1919,	1920,
Buckwheat	11,375,500	(1918)	9,966,500				1919,	1920,
Mixed grains	35,662,300	(1918)	31,427,000				1919,	1920,
Corn	16,940,500	(1919)	13,696,000				1919,	1920,
Flax	8,259,800	(1916)	10,766,000				1919,	1920,

The detailed figures are as follows:—

## I.—Areas and Provisional Estimate of the Yield of Cereal Crops for 1920, as Compared With the Final Estimate of 1919

Field crops.	1919, 1920,		1919, 1920,		1919, 1920,

# Canadian Pacific Railway's Position Strengthened

**Increase in Railroad Rates a Recognition of Need of Good Service—  
Rapid Rise of Operating Expenses the Cause—Company's Assets of  
Over One Billion Dollars All Contribute to Prosperity of Canada**

UNUSUALLY good crops and continued business activity combined to make 1920 a record year for the Canadian Pacific Railway Company. Good use was made of this opportunity to increase the value of the land and water transportation services operated. While gross earnings showed a substantial increase over those for 1919, higher operating expenses reduced net earnings during the early part of the year. For the first seven months of 1920 gross earnings

the amount of \$91,691,447, including over \$53,000,000 of cash, and miscellaneous assets to the value of \$276,337,570, which may be itemized as follows:—

Deferred payments on lands and townsites . . . . .	\$ 66,659,932
Imperial and Dominion Government Securities . . . . .	37,702,581
Provincial and Municipal securities . . . . .	2,031,721
Debentures Stock loaned to Imperial Government . . . . .	40,000,000
Miscellaneous Investments . . . . .	31,762,215
Assets in lands and properties . . . . .	95,211,438
Cash . . . . .	2,969,683

\$276,337,570

The above assets were quite apart from current assets, which totalled \$91,691,447 as compared with \$27,344,834 of current liabilities. Accordingly the Company has special assets, quite apart from its railway lines and steamships, equal in value to over \$105 per share on the stock or within \$20 of its present market value.

Deducting prior ranking securities, current liabilities and the various replacement and contingent reserves, it will be found that the Common Stock has a book value of \$249 per share.

But even before the great rise in construction costs during the war, C.P.R. was generally conceded to have been constructed at very low cost. A comparison of its cost per mile with that of the Grand Trunk Pacific and National Transcontinental will bear this out. Since 1913, construction costs

BROOKS AQUEDUCT—SHOWING INVERTED SYPHON UNDER MAIN LINE OF THE C.P.R.

were \$109,433,347, compared with \$91,442,630 for the first seven months of 1919, an increase of \$17,990,717. The operating expenses for the same periods were \$96,385,675 and \$76,259,448 respectively, an increase of \$20,126,227, leaving net earnings of \$13,047,672 and \$15,183,182 respectively, a decrease of \$2,135,510.

Conditions, however, improved later, showing a net increase of \$2,353,040 for the month of October, and a net increase of \$1,223,201 for November, thus reducing the net decrease for the eleven expired months of the calendar year to \$319,888. During this period, gross earnings increased by 22.6 per cent., as compared with 1919, while working costs grew by 28.4 per cent.

The showing of the Canadian Pacific was better than that of the Canadian railroads as a whole, but the importance of adequate transportation facilities was recognized in September by the granting of increases in both freight and passenger rates. Higher rates had been urged by the Canadian Railway Association, representing all the important roads in the country, and it was clearly demonstrated that without such an increase railroad service in Canada would depreciate.

The railroads were able to present a strong case before the Board of Railway Commissioners, and increases averaging about 30 per cent. were granted.

A unique feature in connection with the Company's capitalization is that, with the exception of \$3,650,000 of Algoma Branch First Mortgage Bonds, its properties are not mortgaged. The issue of 4 per cent. First Mortgage Bonds originally outstanding has been retired and for several years previous to the war all financing was provided for by the issue of 4 per cent. Perpetual Debenture Stock, 4 per cent. Preference Stock and Common Stock. The first two mentioned were sold in England in various amounts at an average price very little below par, constituting probably the most economical financing ever accomplished by any railroad. Of the \$260,000,000 of Common Stock \$110,000,000 was sold at a premium and of this amount \$60,000,000 realized \$175 per share.

On December 31st last the Company's total assets were valued at \$1,078,777,358. Of this amount railway lines, equipment and steamships made up \$578,352,928, and the remainder included as principal items, net current assets to

BROOKS AQUEDUCT—C.P.R. IRRIGATION SYSTEM—  
10,480 FEET LONG

have gone up one hundred per cent. and in estimating the replacement value of the road, the figures at which the railway lines stand on the books might be doubled without possible criticism. To be conservative, however, let us increase the amount of this item by \$274,249,378, or 50 per cent. This would give the stock a value of \$360 per share.

### Farm Live Stock in Canada

A report issued on November 3, by the Dominion Bureau of Statistics, shows the number of each description of farm live stock in Canada on June 15 last, as estimated from returns collected from individual farmers throughout Canada in conjunction with the provincial governments. The total number of horses in Canada on June 15 this year is estimated at 3,400,352, as compared with 3,667,369 in 1919. Mules number 9,055, as against 15,102 last year. Cattle number 9,477,380, as compared with 10,084,011 in 1919, sheep 3,720,783 as compared with 3,421,958, and swine 3,516,678 as compared with 4,040,070. The total head of poultry is 30,505,819 as compared with 34,645,238 in 1919, the different descriptions in 1920 being hens, 25,942,105; turkeys, 791,766; geese, 754,455; and ducks, 617,638. Rabbits, all in British Columbia, number 82,146, as against 83,050 in 1919. Thus for all descriptions of farm live stock, excepting sheep, the number this year are less than last year. Sheep, which for so many years before 1917 were declining in numbers, show a further satisfactory increase, the number, 3,720,783, constituting a further advance of 298,825 over last year's record total of 3,421,958.

By provinces, Prince Edward Island shows an increase over the numbers of last year for all descriptions. In the other provinces, horses show a decrease as compared with last year in all provinces, except British Columbia, where the number is 44,070 as compared with 43,717. Cattle show a decrease in all provinces. Sheep have increased in all provinces, excepting Manitoba, and swine have decreased in all provinces excepting Prince Edward Island. Poultry, including all descriptions, have increased in Prince Edward Island, Manitoba and British Columbia, but have declined in Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and Alberta.

The detailed figures are as follows:—

### I.—Numbers of Horses, Cattle, Sheep and Swine in Canada, 1916-1920

Live stock—	1916,	1917,	1918,	1919,	1920,

### PULP AND PAPER INDUSTRY EXPANDS

Growth Reflected in Capital Increases—Several New Mills Under Construction—Exports Increased Steadily in 1920

BY EDWARD BECK

Canadian Pulp and Paper Association

TWO outstanding features mark the history of the pulp and paper industry of Canada during the year just passed. One is the numerous reorganizations which have taken place among the old established companies, the other the number of entirely new projects announced, some of which have reached the stage of actual development while others are still in embryonic form. Recapitalization of existing companies has in most cases been necessitated by business expansion and is reflected, or will be shortly, in increased production. Particulars of the new issues of securities are given in the investment section of this issue.

### Some New Companies

Of the score or more of new companies incorporated during the year a few have actual construction work under way and in all probability will be in the producing class within the coming year. These include the Three Rivers Pulp and Paper Co., Ltd., capitalized at \$4,000,000, now building a 100-ton pulp mill at Three Rivers, Que.; the Great Lakes Pulp and Paper Co., Ltd., who are erecting a mill at Port Arthur, Ont., to have an ultimate capacity of 75,000 tons of pulp and 35,000 tons of paper a year; the Fort William Pulp and Paper Co., Ltd., now constructing a \$3,000,000 plant at Fort William to produce 120 tons of groundwood pulp and 100 tons of newsprint paper daily.

In addition to these, important additions to the industry will be the International Paper Co.'s new plant at Three Rivers, now nearing completion, and which will have a daily capacity of 200 tons of pulp and 200 tons of paper.

Price Bros. and Co., Ltd., are also preparing to go ahead with their new development at Saguenay, Que., the coming spring, work on which has been held back for a year by various causes.

A score or more mills, not enumerated above, have increased their capacity during the year or are now installing new machinery for that purpose. The coming year promises a largely increased output in practically all branches of the industry.

Census returns for 1919, gathered by the Bureau of Statistics at Ottawa, give the total capitalization as of that year at \$264,581,300 and the total marketable value of the output as \$139,925,000. The 1920 figures, which will not be available for some months, are expected to show a capital investment of at least \$300,000,000 and a production value of more than \$200,000,000.

This year's consumption of pulpwood, exclusive of exports, is estimated at 3,500,000 cords, against 2,428,691 in 1919. The year's exports of unmanufactured pulpwood will exceed one million cords.

### Export Business Growing

Pulp and paper exports for the first ten months of the calendar year—January to October, 1920—reached a total value of \$134,161,470, distributed as follows:—

1920.	Paper.	Chem. pulp.	Mech. pulp.	Total.
January	\$ 5,519,718	\$ 2,658,974	\$ 972,574	\$ 9,151,266
February	6,304,388	2,615,156	472,383	9,391,927
March	7,291,297	3,875,281	562,308	11,668,796
April	4,729,354	2,936,633	506,369	8,172,356
May	6,939,346	3,138,972	779,710	12,088,028
June	7,877,740	6,254,409	2,136,767	16,368,916
July	6,877,914	6,098,740	2,528,993	16,014,747
August	6,746,817	6,702,644	2,309,266	18,258,727
September	7,855,493	6,758,156	1,877,053	16,490,702
October	8,128,254	4,950,944	1,986,507	16,706,005
Total	\$70,209,331	\$49,319,909	\$14,632,230	\$134,161,470

This compares with a total value of \$78,352,826 for the corresponding months of 1919.

The 1920 exports included 8,825,530 cwts. of newsprint, valued at \$42,675,627; 38,047 cwts. of printing paper,

# EDMONTON

*The Capital City of Alberta*

**Holds Today the Most Strategic Position in Western Canada**

GATEWAY TO THE GREAT NORTHERN OIL FIELDS, including FORT NORMAN and PEACE RIVER, with their stores of "liquid gold," besides Natural Gas, Tar, Gypsum, Salt and other Mineral Resources.

**E**DMONTON is an important Industrial, Agricultural, Railway and Distributing point, with three Transcontinental Railway lines; C.P.R., C.N.R. and G.T.P. and branches, besides the Edmonton, Dunvegan and B.C., and Alberta and Great Waterways Railways. Educational Centre; is the seat of University of Alberta; has exceptionally fine Public and High Schools and Colleges. Municipally owned and operated Electric Light and Power, Street Railway, Telephone and Waterworks Utilities, handsome Legislative Buildings and Government Administration Headquarters. Municipal Golf Links. Exhibition Grounds and Buildings largest in Western Canada.

MANUFACTURES of every description. *City underlaid with unlimited supply of Coal.* Surrounding district includes some of the most productive mixed farming lands in the West. Important Live Stock Yards. Large Packing Plants. Largest Creamery in Canada; last year produced 3,300,000 pounds Butter.

Population	65,000	Net Assessment Land (1920) Improvements	\$61,891,965 17,299,565
			<u>\$79,191,550</u>
Street Railway Passengers	Year 1919 11,779,466	10 Mos. 1920 9,497,439	Civic Utilities, Gross Earnings (10 months) 1920 \$2,368,064.97
Building Permits	\$838,541	\$3,166,955	Municipal Voters 26,793
Bank Clearings	\$233,066,784	\$240,971,490	School Pupils 12,446

valued at \$400,590; and other paper, valued at \$8,077,801. The woodpulp exported comprised 1,698,231 cwts. of sulphate (kraft), valued at \$8,715,005; 1,255,124 cwts. of bleached sulphite, valued at \$9,852,615; 3,675,928 cwts. of unbleached sulphite, valued at \$21,602,878; and 3,985,629 cwts. of groundwood, valued at \$12,624,965. Countries of destination were:

Paper—United States, \$10,067,276; United Kingdom, \$2,811,561; other countries, \$8,275,181.

Woodpulp—United States, \$43,281,562; United Kingdom, \$6,193,991; other countries, \$3,319,910.

Demand for pulp and paper of all descriptions remained firm throughout the year, with some tendency to diminish in respect to wrappings, boards, high grade papers and specialties, towards the close of the year in sympathy with general trade tendencies. The demand for newsprint paper exceeded the supply throughout the year and shows little tendency to diminish, despite the influx of some European newsprint to the American market during the last quarter of the year. Prices in all lines remained comparatively firm, the cost of raw materials and of labor militating against any precipitate deflation of market price. The industry occupies a somewhat unusual position in respect to its inventories, there being at no time any large stocks of finished commodities in reserve either at the mills or in the hands of the jobbers and consumers. There are, as stated, accumulations of raw materials, the industry necessitating arranging for these many months in advance of their actual use. What effect general liquidation may have upon the value of stored pulpwood, woodpulp, etc., remains to be seen.

#### IMPORTANT INDUSTRIAL CASES DECIDED BY COURTS

##### Board of Railway Commissioners Holds Average Demurrage Plan to be Discriminatory—Proprietorship and Registration of Ownership of Trade Marks

CASES dealing with matters of industrial interest during the past year have in few instances been of sufficient importance to reach the Courts of Appeal. The two following are of consequence, in the first case because the reasons for the Railway Board's finding against the average demurrage plan are quoted, and in the second case because the trend of the law in Canada is shown in a decision on trade-marks.

##### Average Demurrage Plan

In the application to the Railway Board for an order directing the extension of the Canadian Car Service Rules so as to provide for what is known as the average demurrage plan, the decision of the board against the adoption of that plan, chiefly because of its discriminatory effect, was issued in January last.

The average demurrage plan, as explained by Commissioner MacLean, is as follows:—"It is set out that the demurrage on all cars held for loading or unloading shall be computed on the basis of the average time of detention to all cars released during each calendar month. The method of computation outlined is that a credit of one day shall be allowed for each car released within the first 24 hours of free time. A debit of one day shall be charged for each 24 hours, or fraction thereof, that a car is detained beyond the first 48 hours of free time. Not more than one day's credit is to be allowed on any one car, and in no case is more than 5 days' credit to be applied in cancellation of debits accruing on any one car, thus making a maximum of 7 days, including Sundays and holidays, that any car may be held free.

At the end of the calendar month the total number of days credited will be deducted from the total number of days debited and the demurrage charge per day charged on the remainder. If the credits equal or exceed the debits no charge is to be made for the detention of the cars, and no payment is to be made to the consignor or consignee in respect of such excess of credits. Credits in excess of debits of any one month are not to be considered in computing the average de-

duction for another month. Those taking advantage of the average plan are to forego the advantages of the weather and of the bunching rules."

##### Previous Action of the Board

In 1917 a judicial decision was secured on various amendments to the Canadian Car Demurrage Rules, and in June, 1919, a letter was issued by the board that it was prepared to arrange for a hearing if the parties interested desired to add to the record in the case. Commissioner MacLean goes on: "The matter as presented may be subdivided into the following headings: (a) Whether when the consignor or consignee unloads within the free time allowed by the demurrage rules he has a 'right' to apply the difference between the free time allowed and the time actually taken as a credit on another car which is not loaded or unloaded within the free time; (b) the advantage of such proposed system of credits as an incentive to quicker loading or unloading; (c) the general effect on car movements."

"On careful consideration of the evidence adduced and the special references made to practice in the United States, I am of opinion that the average system is discriminatory in principle and that it has not been affirmatively established that it will so work out as to increase the car supply available at any given time."

##### United Cigar Stores vs. Miller

In the second case referred to above, that of United Cigar Stores, Ltd., vs. Miller, the petitioner sought to have the words "United Cigar Stores" registered as a trade-mark and to have the same words registered in the name of the objecting party expunged. These words constituted the trading name of the petitioner and most of the trade-marks claimed by it were for particular brands of cigars. It was held that on the facts as stated the petitioner was not entitled to have the words "United Cigar Stores" registered as a trade-mark.

R. S. Smart of the Ottawa bar has made an annotation in the Dominion Law Reports dealing with the question brought up in the above case, viz.: If a company has a corporate name similar to that of the petitioner, would that be a bar to any action which might be brought against it for passing off its goods as the goods of the petitioner? Mr. Smart says that these rights as between two parties who use a trade-mark concurrently have never been defined in Canada.

In Canada under the Canadian Trade-Mark and Design Act the applicant is required to be entitled to the exclusive use of the trade-mark. In Partlo vs. Todd, Chief Justice Ritchie said: "It is not the registration that makes the party proprietor of a trade-mark; he must be proprietor before he can register. I think the term 'proprietor of a trade-mark' means a person who has appropriated and acquired a right to the exclusive use of the mark."

##### Boston Rubber Cases

The use of the name of a corporation as a trade-mark was dealt with in the Boston Rubber Shoe Company vs Boston Rubber Company of Montreal, the facts and decision being:—

"The plaintiff, incorporated in Massachusetts in 1852, registered the trade-mark in 1897. The defendant in 1899 sold rubber boots and shoes with the mark of 'The Boston Rubber Co. of Montreal, Ltd.,' and pleaded that the mark was in effect a corporate name and the use of it was not fraudulent. The Supreme Court held that the word 'Boston' had become an invented or fancied name. Sir Louis Davies said: 'It seems to me very difficult on the evidence to find that fraud and bad faith were absent. The object may not have been to deceive purchasers, but that such would have been the result I entertain no reasonable doubt. The defendant company has the right to use its corporate name for all lawful and legitimate purposes. It has not the right to use it, however, by stamping it upon goods it has manufactured and offered for sale, if by so doing it causes the purchasing public to believe that the goods are those of the plaintiff company.' Restrained use of words 'Boston' or 'Bostons' in connection with rubber boots and shoes by stamping circular advertising without clearly distinguishing from the shoes of the plaintiffs."

# PROVINCE OF MANITOBA

## *Humane Legislation is Good Business for the State*

**T**HE experience of the Province of Manitoba in recent years proves that laws for the benefit of the community, if well thought out and carefully and sympathetically administered, make for a better and more virile citizenship.

Below are listed some of the more important Acts of this kind which have proved to be good business for the Province of Manitoba:

### *Public Health Nursing*

In 1915 the Government of Manitoba inaugurated a system of Public Health Nursing in rural communities remote from hospitals and regular medical practitioners. The rural public school is the base of operations, but the work is carried into the home not only for the school pupils but for the mothers and younger children not attending school. This work has been invariably successful and is doing much to improve the general health of the children of Manitoba, especially in the communities of the foreign born. At the present time there are approximately 50 of these public health nurses operating in the rural districts under the Provincial Board of Health.

### *Child Welfare*

Permanent child welfare stations have been established in a number of centres in the province. New legislation providing for a radical and far-reaching extension of child-welfare work in Manitoba is to be introduced at the next session of the legislature.

### *Municipal Hospitals*

The province of Manitoba has inaugurated a scheme of Government co-operation with the municipalities whereby adequate local hospital accommodation can be easily and cheaply acquired by any district in the province. The procedure is simple and in the hands of the people themselves through co-operation with the Government and the Provincial Board of Health. A large number of new hospital districts have been created within the past two years and many hospitals have been built, thus avoiding the necessity of the long and often dangerous journey to hospitals in the large centres.

### *Treatment of the Mentally Diseased*

Modern methods of treating the insane or mentally deficient in the province of Manitoba were adopted some time ago. A few psychopathic ward for observation and treatment of new cases was es-

tablished in connection with the Winnipeg General Hospital, with the result that only about one-third of those treated have been committed to the hospitals for mentally diseased. The majority have responded to the treatment at the psychopathic ward, and most of these have been returned to their homes quite fit to assume once more the duties of citizenship. At the hospitals the treatment is now remedial instead of custodial.

### *Mothers' Allowances*

The Manitoba system of Mothers' Allowances, sometimes called Widow's Pensions, was instituted in 1916. It is not considered as charity, but rather as a matter of good business for the community at large by insuring that fatherless children should have the benefits of the care of their own mothers and thus be afforded an equal chance with other children to grow up into healthy, well-educated citizens. The Manitoba Mothers' Allowance system is the broadest in application and the most generous in scales of allowances known on the North American continent.

### *Minimum Wage Law for Women*

The Minimum Wage Law for Women which came into effect in 1918, was the first of its kind in Canada and has proved most successful, resulting in great benefits to the women engaged in all branches of industry in the province. It not only sets a minimum wage based on the cost of living, but dictates hours of labor and conditions as to safety, sanitation and comfort which are rigidly enforced.

### *The Narcotics' Act*

The Manitoba Narcotics Act is one of the most comprehensive and most stringent known, and is being carefully enforced with excellent results, reducing the ravages of habit-forming drugs to a minimum. The Manitoba system has to its credit scores of authentic permanent cures of drug addicts.

## IRON AND STEEL IN 1920

**Material Developments Not Remarkable—Many Ambitious Plans Formulated, but Some Are Still Pending—Average Production Ahead of Last Year**

WHILE the Canadian iron and steel industry underwent some development in 1920, progress was not remarkable. Production during the first nine months of the year was ahead of 1919, but failed to show the increase made in previous years. Complete figures of the production during the latter three months are not yet available, but the situation was not quite as satisfactory. The general industrial slump affected the industry, while the labor situation in the province of Nova Scotia, in connection with the Dominion Steel Corporation and the Nova Scotia Steel and Coal Co., was detrimental.

The total production of steel (including ingots and direct steel castings) in Canada during the first nine months of 1920, according to statistics collected by the Mines Branch of the Department of Mines, Ottawa, was 945,282 short tons, or an average of 105,931 tons per month as compared with a total production during the corresponding period in 1919 of 770,053 tons, and an average monthly production throughout the whole of 1919 of 86,157 tons. The production of the steel during the nine months included: 901,188 tons of ingots and 44,094 tons of direct castings. The production in electric furnaces was 18,823 tons and in open-hearth, converter, crucible or other furnaces, 926,959 tons. Comparative figures are as follows:—

	1916.	1917.	1918.	1919.	1920.
January	130,991	145,808	145,808	120,297	102,759
February	126,671	138,975	100,531	94,245	94,245
March	589,553	182,420	158,234	111,793	109,027
April	139,734	166,612	83,445	103,578	100,965
May	155,411	174,275	77,146	100,965	100,965
June	187,161	165,973	76,185	101,985	101,985
July	100,817	139,222	165,022	73,536	105,394
August	107,273	145,934	170,495	60,236	117,460
September	118,411	149,000	166,725	66,894	110,269
October	128,469	161,297	184,115	73,716	.....
November	124,931	158,122	129,255	92,328	.....
December	116,265	156,967	117,965	97,789	.....
Average monthly	106,268	145,494	156,954	86,157	105,931

## Pig Iron

The total production of pig-iron in Canada during the first nine months of 1920, according to statistics collected by the Mines Branch of the Department of Mines, Ottawa, was 806,488 short tons (800,608 tons made in blast furnaces and 5,880 tons made in electric furnaces from scrap steel), as compared with a production during the first nine months of 1919 of 710,114 short tons. The average monthly production of pig-iron during the first nine months of 1920 was 89,610 tons as compared with an average monthly production throughout 1919 of 76,482 tons.

The blast furnace plants active during the first nine months were those at Sydney and North Sydney, N.S., Hamilton, Port Colborne and Sault Ste. Marie, Ontario. The blast furnace plants at Midland, Parry Sound, Deseronto and Port Arthur, Ontario, were idle throughout that period. At the end of September, 10 stacks were active and eight idle. Pig-iron was made from scrap iron and steel at four electric furnaces located at Hull, Montreal and Shawinigan-Falls, Quebec, and Orillia, Ont. The monthly production of pig-iron in short tons since 1916 has been as follows:—

	1916.	1917.	1918.	1919.	1920.
January	89,187	74,239	103,563	81,494	.....
February	83,801	78,507	86,840	70,864	.....
March	562,097	103,789	96,848	91,286	77,155
April	100,564	104,331	93,359	86,390	.....
May	108,891	104,867	83,059	97,598	.....
June	99,995	103,037	66,470	89,258	.....
July	92,012	93,499	109,723	60,927	94,417
August	87,864	100,727	96,164	67,404	104,482
September	102,744	100,690	95,102	56,806	104,922
October	113,608	103,277	106,962	56,049	.....
November	104,496	97,900	106,585	73,092	.....
December	106,496	87,152	119,186	78,526	.....
	1,199,257	1,176,480	1,195,551	917,781	.....
Average monthly	97,438	87,540	99,629	76,482	89,610

The formation of the British Empire Steel Corporation, if it had materialized, would have been a great event, but

the end of the year found the situation very uncertain. For various reasons, not very widely known, the deal failed to go through as formerly planned. Small companies were dropped out, because of financial reasons, and the exclusion of Canada Steamships is now under consideration, at least that is the impression in many circles.

## United States Competition

United States competition in domestic trade is another factor of considerable importance. The United States Steel Corp., through its subsidiary, the Canadian Steel Corp., Ltd., is now well under way with its plant at Ojibway, Ont., on the Detroit River, opposite Detroit. The initial capitalization for this purpose was \$20,000,000, since raised to \$25,000,000. The plant will be provided with blast furnaces, open hearth steel works, rail mill, wire mill, structural and bar mills, sheet mill and, perhaps, some other mills, together with all necessary plant auxiliaries, such as docks, by-product coke plant, power stations, pumping plant, machine shops, foundries, etc.

The Algoma Steel Corporation is constructing a structural steel mill at Sault Ste. Marie, Ont., at the cost of approximately \$7,000,000. Work is progressing rapidly, and the plant is expected to be completed within the next few months. Equipment will be installed that will enable the corporation to produce structural steel shapes up to 24-inch channels and beams. Ultimately, it is intended to produce 27-inch beams when the demand for this size is sufficiently large in Canada to warrant this. Canada's imports of structural steel of all descriptions have been estimated at approximately 300,000 tons a year. At the outset the Algoma Corporation plans to produce about one-third of the entire requirements of the Dominion, and it will eventually manufacture enough structural material to provide for all domestic needs. In addition to the initial output of 100,000 tons of structural steel, it is planned to roll the greater part of the corporation's rail products in the new mill. Thus within the next year the output at the Sault will be raised from 300,000 to 400,000 tons of steel per year, and the number of men on the pay-roll will be raised from 3,000 to 3,600. Steel rails are rolled in the present mill at the Sault up to 105 pounds. It is the intention now to provide for the rolling of rails up to 125 pounds in connection with the new structural steel mill.

Baldwin's Ltd., the large corporation of Wales, located a Canadian plant at Toronto, under the name of the Baldwin's Canadian Steel Corporation. The company is operating, but is not yet in full swing. The next year, however, will bring some new developments, provided the power shortage can be overcome.

British Columbia is aiming at intensified development of the steel trade. A company, under the name of the Coast Range Steel, Ltd., has been incorporated with a capital of \$15,000,000, and plans are now being formulated for the erection of a plant. The matter has been discussed with the provincial government, which has signed an agreement to pay the bounty of \$3 per ton on pig iron, as specified in its legislation, and which will accord the project every support. No particularly large local financial interests are connected with the scheme, the principal backing being British capital, which, if the report of the engineers is favorable, will be unlimited, it is said. As yet there is no talk of proposed location of this industry. If established, it will doubtless be on the mainland, as many other industries closely follow steel, and while coal and other raw materials are to be found on Vancouver Island, transportation and other advantages are in favor of the mainland.

The only other important development in the west was the opening of the open-hearth furnace plant at Selkirk, Man., by the Manitoba Rolling Mills Co., at a cost of \$1,000,000. This plant, when operating at full capacity, can produce from four to six heats per twenty-four hours, or from 60 to 90 tons of steel ingots per day. Scrap iron, mixed with a small quantity of iron ore, ferro manganese and ferro silicon, make the ingredients of the steel manufactured by this process. Soft coal, of certain grades only, from the western mines are used.

# Ontario Still Leads in Industrial Activity

**Manufacturing Centres Experience Satisfactory Growth—Building Operations Were Retarded to Some Extent By the High Cost of Material—Power Shortage in Ontario Had the Effect of Discouraging the Establishment of New Plants and Also Reduced the Capacity of Industries Already Operating**

ONTARIO, which is still the leading manufacturing province of the Dominion, has been prosperous during 1920, at least this is the indication in the reports from representative municipalities to *The Monetary Times*. Industrially there has been large expansion, although building operations were retarded to some extent by the high cost of materials. Power shortage in Ontario had the effect of discouraging the establishment of new plants there, and at the same time reduced the capacity of the industries already operating. Nevertheless conditions cannot be described in any other term but satisfactory.

Generally speaking, the greatest expansion took place during the earlier part of the year. In the early summer business readjustment in the United States began to make itself felt here, which condition developed more highly in the latter months.

Investment of American capital in branch plants was a favorable feature, although not quite so favorable as in 1919. Early in the year readjustment was looming on the horizon and wise American business men adopted a very conservative attitude, refraining from investing extensively in any new enterprises.

## 28 New Industries for Toronto

Toronto's new harbor sites and other industrial advantages have brought many new industries in 1920. Up to December 10, 28 had been secured, the following list being furnished to *The Monetary Times* by E. L. Cousins, industrial commissioner:—A. Stein and Co., Chicago, Ill. (Paris Garter); Sturgis Steel Go-Cart Co., Sturgis, Mich.; Q.R.S. (Player Piano Rolls), Chicago, Ill.; K. and S. Rubber Goods Co., Weston, Ont.; Empire Timber and Tie Co., Blind River, Ont.; Safe-Cabinet Co.; Canadian Farnsworth Co., Conshocken, Pa.; Arco Paint Co., Cleveland, O.; Cerebos Salt Co., Hull, Eng.; United States Hoffman Machinery Co., New York; Walker Dishwasher Co., Syracuse, N.Y.; Republic Stamping and Enamelling Co., Canton, Ohio; Hickok Mfg. Co., Rochester, N.Y.; Davis-Bournonville Co., Jersey City, N.J.; Dominion Carbon Brush Co., Toronto, Ont.; Gabriel Snubber Co., Cleveland, Ohio; Triangle Conduit Co., Brooklyn, N.Y.; Bastian-Morley Co., Laport, Ind.; Flexo Tire Filler Co., Calgary, Canada; Willard Storage Battery Co., Cleveland, Ohio; Brokaw-Eden Co., New York, Canadian Co., Gillespie Eden Co.; Chicago Flexible Shaft Co., Chicago, Ill.; Auto Knitter Hosiery Co., Buffalo, N.Y.; Exide Storage Battery Co., Philadelphia, Pa.; Northwestern Chemical Co., Marietta, Ohio; Lorraine Chocolate Co., Toronto, Ont.; Feldspar Milling Co., Tichbourne, Ont.; Liquid Carbonic Co., Chicago, Ill.

"Many of these industries," said Mr. Cousins, "have entered Canada feeling somewhat uncertain as to the volume of trade which they will be able to command, and in many cases have only been desirous of leasing floor space in existing commercial or manufacturing plants. The high cost of building construction has, of course, also been deterrent to these companies. We are glad to report, however, that several concerns who early in the year were satisfied with leasehold space have now definitely cast in their lot with Toronto, and have purchased or about to build factory premises of their own.

"I may say that there are 175 American industries with branch plants now in Toronto.

"In addition to the new industries above referred to, factory extensions of previously established industries to the amount of \$6,337,475 have been made this year.

"The above information, I think, clearly indicates that Toronto has had at least a fair share of industrial activity, and with the recent arrangements concluded with the Mac-

kenzie Electrical interests, together with the Hydro Power completion of the Chippawa development, we may confidently look forward to a very great industrial and commercial extension in Toronto in the next few years."

## Hamilton Prosperous

Despite the handicap of electric power shortage, from which practically all of the Ontario municipalities have been suffering for the past two or three years, Hamilton during 1919 enjoyed another period of unusual industrial development and prosperity. Lack of a sufficient power supply unquestionably kept a number of large manufacturers, particularly Americans, from locating, but inasmuch as the conditions existing in Hamilton were typical of power conditions existing in other desirable Canadian manufacturing centers, the majority of the industries did not decide to locate elsewhere, but wisely deferred action until such time as conditions right themselves and the situation becomes normal. Present indications are that with the coming of spring, or about April 1st, power problems, at least so far as industries are concerned, will become a thing of the past, and as a result increased industrial activity may be looked for during 1921.

But to get back to 1920, Hamilton has no reason to complain of its industrial growth during this year of more or less abnormal conditions. In fact, with the exception of 1919, it was probably the best year the city has enjoyed industrially since 1911. A total of 25 new industries were added to the city's already long list, and while the majority of them were comparatively small, being capitalized at from \$25,000 to \$100,000, many of them are branches of large American concerns that give promise of speedy development providing that tariff and other conditions continue favorable to Canadian industrial growth. Among the branches of American concerns to select Hamilton as their Canadian headquarters were Peterson Core Oil Co., Chicago, Ill.; Canadian Nathan Co., New York, N.Y.; Don-O-Lac Co., Rochester, N.Y.; Metlskin Co., Rochester, N.Y.; Moto-Meter Co., Long Island City, N.Y.; Libbey-Owens Co. (plate glass), Charleston, W. Va. American capital is largely interested in others of the new industries, although they are not actually Canadian branches of existing American companies.

In addition to the new industries secured there was, during the year, marked development among the existing industries. The Dominion Foundries and Steel Company recently completed the erection of new buildings and installation of one of the finest plate mills on the continent, at a cost of a million and a half of dollars; the Canadian Cottons, Ltd., has nearing completion a seven-story spinning mill which represents an outlay of close to a million dollars; the Steel Company of Canada has under construction a wire products mill which represents an expenditure of about half a million dollars, while the Mercury Mills, Chipman-Holton Company and other textile industries made very considerable extensions during the past twelve months. The progress of the city can best be gauged by the assessment returns, completed on October 1st last, which show an increase for the year in the assessment of upwards of \$30,000,000, and in the population of 6,623.—C. W. Kirkpatrick, Industrial Commissioner.

## Guelph Will Grant Concessions

The new industries secured in the city during the year 1920 are the Moncrief Furnace and Manufacturing Co., the Canadian branch of the Henry Miller Foundry Co. of Cleveland, Ohio. This company is about to erect in the city a modern foundry and plans to this end are now being prepared. Erin Casket Works is the name of another industry recently secured, which

will make oaken caskets. The Guelph Brass Works, a new industry, was secured in the spring of this year, as well as the Federal Electric Washing Machine Co. from Chicago. The Regent Textile Co. from Montreal have purchased a factory building in June last, and are now planning large additions. The Sherer-Gillett Co. of Chicago purchased from the city of Guelph a factory building on Suffolk street, which building they have had greatly enlarged, and in which they expect to commence manufacturing by the 1st of December. This company has also acquired a large piece of additional ground and they announced their intention to erect on this in the spring of 1921 a modern food factory. The Shinn Manufacturing Co., from Niles, Mich., have purchased a property on Woolwich street, and are now erecting an addition three storeys in height, 53 feet wide by 90 feet long, and in this addition the National Standard Co., from Niles, Mich., is to manufacture automobile braid. The Canada Ingot Iron and Culvert Co. are erecting an entirely new factory building between George and Clarence streets. The plan calls for two buildings, 48 feet long by 292 feet wide, and 120 feet long by 132 feet wide. These two buildings are now nearing completion, and are expected to be occupied by the company by the first of the year.

The city is still prepared to consider granting a fixed assessment to new manufacturers for a term of ten years, and in many other ways encouraging them to come to this city.—H. Westoby, secretary, Chamber of Commerce.

#### Chatham Progresses

Some local plants have built extensions during the past year. The Dominion Sugar Co. has installed a special machine and equipment for handling part of their by-product. This is the only equipment of its kind on the American continent. The Hayes Wheel Co. has added to its plant and has installed a modernly-equipped rear axle assembly plant. The Dowsley Spring Co. has erected a large building, steel-constructed, for the manufacture of springs. This is a big improvement to the building which was some time ago destroyed by fire. The city has erected and has in operation a modern asphalt plant, used in connection with street paving and pavement repairs. The Canadian Fertilizer Co. has made quite an extensive addition to their building, and the Chatham Malleable and Steel Co. now has quite a large addition under way. The Gray-Dort Motors, Ltd., has taken over all the plants of the William Gray Sons-Campbell Co., and has made some additions and is installing the most modern of automobile manufacturing machinery. Two companies have purchased buildings in the city and will be opening their manufacturing in the course of a few weeks.—Manager, Chatham Chamber of Commerce.

#### The Twin Cities

Recent expansions industrially are the inclusion of manufacturing pulp and paper and mining machinery in the operations of the Port Arthur Shipbuilding Co., Ltd., which will mean an increase of approximately 600 skilled employees and erecting an open-hearth furnace; also the building of the Kamistiquia Pulp and Paper Co., Ltd.'s, new pulp mill. It is understood that the local branch of the Provincial Paper Mills, Ltd., is about ready to increase its output to 100 tons pulp and 50 tons newsprint per day. Plans for two other pulp and paper mills are about completed. During the year the Port Arthur Wagon Works has become the property of John Stirrett & Sons, who are expanding into a general wood-working business.

Port Arthur is also extremely fortunate in being surrounded with a country that offers unlimited recreational and vacation facilities. These attract each summer many thousands of tourists, 32,000 in 1920, and this is rapidly becoming one of the community's chief industries.—M. Francis, secretary-treasurer, Port Arthur Board of Trade.

The present year has witnessed further demonstrations of faith in Fort William's industrial future. The most important item of record during the present year is the establishment here of the Fort William Paper Company. This company is now erecting pulp and paper plants having a capacity of not less than 100 tons of pulp per day. The plant is to cost not less than \$3,000,000 exclusive of the cost of land; it is located

on what is known as the Mission site. The contract for the construction of the plant has been placed in the hands of Barnett & McQueen of Fort William. The pulp mill is to be completed ready for operation not later than June 1st, 1921, and the paper mill will be ready for operation not later than August 1st, 1922. There can be no doubt that the establishment of this mill will lead to the establishment of subsidiary industries—paper boxes, wood fibre, wallboard, etc.

An extensive addition has been made to the plant of the Canada Starch Co. in order to provide additional storage for the finished product; a large fabricated steel warehouse has been erected. The Canadian Pacific Railway Company is at present extending their coal-handling and storage plant on Island No. 2. The storage capacity at this point will be almost doubled. The Ogilvie Flour Mills Co. has completed the construction of a feed mill in conjunction with their flour-milling industry. Feed plants have been erected by James Davidson and the Mount McKay Flour and Feed Co. The Northwestern Elevator Co. has completed an annex to their grain storage elevator.

The Canada Car and Foundry Co. has large orders on hand for railway rolling stock; work has been retarded by non-delivery of material. Other foundry and engineering industries have been fully employed.—W. A. Webster, secretary, Board of Trade.

#### London's Rapid Growth

The fact that nearly half a million dollars has been expended in London during 1920 in industrial expansion is cited as proof positive that the Forest City has already entered upon a period of great industrial growth. Indications are that this sum will be doubled in factory buildings next year. The greater portion of this money has gone to London workmen engaged in the construction of kindred trades. Among the larger firms that have expanded or have undertaken new work are the following: The Ruggles Truck Co., McClary Manufacturing Co., C. S. Hymn Co., Murray Shoe Co., Simmons Bed, Spring and Mattress Co., and Greene-Swift, Ltd.

It is known that several of these are also planning for large additions to be constructed next year. Several new factory buildings will be started early in the spring. The Service Truck Co. will build an extensive plant next year, the foundations for which will be laid this winter. The Rawleigh Drug Co. is planning to erect a six-storey factory building on Adelaide street, work on which will commence early in the spring, and there is a probability of a new motor car factory being erected in the east end of the city during the coming year.—Secretary, Chamber of Commerce.

#### Oshawa Open for Industries

The Samson Tractor Co. has located here during the year and General Motors have added a new building to their plant, including the Oldsmobile Motor Co., while the Pedlar People have moved into their new plant. Building has been very brisk, General Motors alone erecting numerous houses for their employees, as well as the Ontario Housing Commission. The General Motors, Ltd., recently gave the town of Oshawa a 65-acre farm on the lake front as a park for the town people, as well as \$3,000 cash to commence immediate preparations for beautifying same. Steps have been taken with the Dominion government to have the harbor put in commission for the large lake vessels. Oshawa is booming and has many advantages open to new industries.—J. A. McGibbon, secretary, Board of Trade.

#### Stratford Has Healthy Growth

Stratford has experienced a very healthy growth during the past twelve months and all the industries located here are in good sound condition. Within the past year the Canadian Edison Appliance Co., Ltd., have established a Canadian branch, and are at the present time employing approximately 300 hands. The Gerlach-Barklow Co., Ltd., high-class art printers and lithographers, removed their Canadian plant from Toronto to Stratford and have purchased the building formerly occupied by the Stratford Clothing Co. The building has been completely remodelled and is now equipped for their work. It is anticipated that a further addition to the building may be made in the near future. The parent company of this organization is at Joliet, Ill. The Kindel Bed Co., Ltd., have again

WINNIPEG, ————— CANADA

built a very large addition to their former plant. The business of this concern has so increased that it has been found necessary to build extensively since commencing operations.

The Grosch Felt Shoe Co., feeling the necessity of enlarging their business, which was formerly at Milverton, Ont., located at Stratford, and they purchased the building previously occupied by the Stratford Desks, Ltd. They carry on the manufacture of felt shoes and boots at the Stratford plant, but the manufacture of the felt is still carried on at the Milverton factory. Stratford affords good opportunities for industrial locations, being centrally located in the very heart of western Ontario. It is a main divisional point on the G. T. R. system, and shipping facilities are good. Educational institutions, recreational grounds and park systems afford conveniences to the public and render it a pleasant place to live in. These facilities are a great benefit to the working man and should be taken into serious consideration by a manufacturer in his decision re locating.—A. W. Deacon, secretary, Chamber of Commerce.

#### St. Catharines Expands

During the past year the city of St. Catharines has experienced considerable growth industrially. Two new industries have located here during 1920, both Canadian branches of American companies, and there is every indication that they will develop into concerns of considerable magnitude. The chief industrial development, however, has been along the line of gradual expansion of the well-established concerns here who have been extending their buildings and increasing their output as well as adding new lines to their products.

St. Catharines through its recently-formed Chamber of Commerce assisted in such development in various ways. A housing company has been promoted to take care of the needs of the city in this direction, and steps are also being taken to promote the extension and development of transportation and other facilities necessary to industrial expansion. The many advantages that this city and district has to offer in the way of cheap power, rail and water transportation, close proximity to large centres, a labor market highly skilled in the various trades, educational facilities, etc., indicate that there is every prospect for the rapid growth of this district industrially.—Secretary, Chamber of Commerce.

#### Power Situation Hinders Welland

Dillon Crucible Alloys has undergone a change of name and management during the past few months. This firm is now known as the Canadian Atlas Crucible Steel Co., and their product is the same as heretofore — i. e., tool steels of various qualities. The control of this plant has been acquired by the Atlas Crucible Steel Co. of Dunkirk, N.Y., and they are now here in Welland making the same high-grade alloy steels as they make in the United States. One other addition has been made to the list of Welland industries; that is the Jos. Stokes Rubber Co., Ltd., and a plant has been built here for the production of hard rubber goods, and beginning in December this year they will employ about 100 hands. This firm is an offshoot of the Jos. Stokes Rubber Co. of Trenton, N.J., whose products are well and favorably known throughout the United States. It is expected that this new factory here will, within a reasonable time, increase to a plant of quite large proportions.

As regards the power situation I have to say that, like every other place in western and central Ontario, we need power badly, and are anxiously waiting the completion of the Queenston-Chippawa development. The hydro authorities, through Sir Adam Beck, tell us that this will be ready for delivery next September. This is mighty good news, for we are to a certain extent marking time until we get it.—Geo. Day, Industrial Commissioner.

#### Kitchener

The year has been marked, industrially, by healthy expansion of well-established manufactories rather than the ingress of new industries. Among the larger expansions are the Lang Tanning Co., Ltd., which a year ago added the manufacture of sole leather, and again this year are spending some \$200,000 in new buildings and equipment. The Dominion Tire Co., Ltd., has continued its policy of expansion and new build-

ings and equipment to the value of nearly a quarter of a million have been erected and installed or are in process. The Kaufman Rubber Co., Ltd., are erecting a large addition to its mammoth plant manufacturing rubber footwear, the extensions forming a substantial industry of themselves. The Ames-Holden Co. have completed the equipment of their automobile plant and were just reaching the quantity-production stage when the slackening up of the demand for tires reached Canada. This firm, however, have their felt footwear factory operating at capacity and it forms a substantial addition to the city's industries.

Transportation facilities have been improved by the Canadian Pacific Railway Co. building a new approach into the city for their freight line (electric, from Galt), and this company is spending about half a million dollars upon relaying their tracks and otherwise bettering their equipment to give a speedier and more frequent service, both passenger and freight. Interswitching gives manufacturers in all parts of the city quick and ready facilities for movement of incoming and outgoing freight. To facilitate the distribution of electric power (obtained from the Niagara system) the city has under erection a sub-station in the north ward.—E. J. Payson, secretary, Board of Trade.

#### Owen Sound Growing

Owen Sound is growing. During the past year several new industries have located here, viz.: The Clinton Knitting Co., the Circle Bar Knitting Co., the Grey Mattress Co., and Taylor Bros.' jam factory.

The Clinton Knitting Co. have already found their premises too small and are enlarging their factory to double capacity. The Circle Bar Knitting Co. occupy a large three-storey building and are contemplating building an addition. Another new industry is just about ready to commence manufacturing, viz.: The Slade Manufacturing Co., manufacturers of electric washing machines. This firm is now installing machinery and expect to commence operation about January 1, 1921.—Geo. Menzies, secretary-treasurer, Board of Trade.

#### Galt Production Sustained

An industrial survey for Galt for 1920 shows that production was well sustained in all lines, scarcely any easing off occurring until November. Two shoe factories were added to the colony, making five in all. The McCaskey Systems, Ltd., coming here from Toronto, are now in fine quarters, rapidly extending their Canadian business. W. A. Dixon, bread and cake manufacturer, has in process of erection a model building to house a model plant. The R. McDougall Co., lathes, tools, etc., have completed a couple of large additions to their shops, and the Galt Knitting Co., in order to widen their working space in the mill, have built a handsome office adjoining, the second floor of which will be used for rest and recreation rooms. Many proposed additions have been postponed on account of high building costs. Transportation facilities are being improved, the C. P. R. being now engaged in spending \$1,000,000 for the same in the city and immediate vicinity on their electric feeders.—Board of Trade.

#### Seven Industries for Belleville

During the past year seven new industries have located in Belleville, one of them being a branch of an American industry, namely, the Teco Company, makers of pancake flour. Other industries are: H. A. Wood Manufacturing Co., Ltd., makers of automobile valves; Toronto Hat Co., Ltd., hats and caps; Natural Tread Shoe Co., Ltd.; A. S. Richardson Co., Ltd., manufacturers of wax figures and shop fixtures. The Elliott Woodworking Machinery Co., Ltd., along with the four last-named industries, moved here from Toronto, where they found much-improved conditions in labor and power. Another new industry is the Judge-Jones Milling Co., Ltd., who have built an elevator with storage capacity of about 40,000 bushels.

There is also the prospect of our securing a new glass industry, and some others, all of them being attracted by the very desirable labor conditions and the populous surrounding country from which this city draws labor by motor bus, etc.—J. Bone, president, Chamber of Commerce.

### Port Hope Active

The Nicholson File Co. have had a busy year and employed a large number of men. The Port Hope Sanitary Manufacturing Co., Ltd., have also had a large output. The Mathews Gravity Carrier Co., Ltd., and the Canadian Hauck Burner Co., Ltd., Canadian branches of American concerns, have both expanded during the year. The Cobourg Felt Co., which was established here in June, 1920, has made rapid progress at this branch and is now employing over fifty hands. The Port Hope Knitting Co. have had a busy year and moved into larger premises. Another new industry, the Provincial Canners, Ltd., established a factory here this summer and had a good pack. The Cosmos Chemical Co. have been busy with an increased output, and the Consolidated Chemical Co. have made additions to their plant. The Ideal Clothing Co. and the Port Hope Mat and Manufacturing Co. have been working to capacity, and the local plant of the Dominion Canners, Ltd., have had one of the largest packs on record.

Owing to a rapidly expanding business the H. B. McCarthy Co., Ltd., are purchasing the Garnett mill property, which will enable them to increase their output for the ensuing year. Another new industry, the Port Hope Veneer and Lumber Co., established their business in the Barrett mill property.—A. H. C. Long, president, Board of Trade.

### Niagara Falls

Niagara Falls, Canada, has enjoyed a year of prosperity. All established industries have been producing to the limit of their capacity. The Bates-Valve Bag Co. has erected a new plant and will turn out bag-holders and ties. The Oneida Co., Ltd., makers of silver-plated goods, has under construction extensive additions to its plant, and when completed will manufacture many parts of its goods now being imported from the parent plant at Oneida, N.Y., to be finished here. The Niagara Wire Weaving Co., which built a commodious plant a year ago for the manufacture of wire cloth, used largely in paper mills, has much of its machinery completed and is now turning out the finished product.

It is expected that the power situation will be greatly improved, as the Hydro Commission is procuring some 2,500 h.p. from other producing companies to tide over the period until the Chippawa development scheme is operating next fall, when there will be an abundance of power for every emergency.—H. H. Bean, secretary, Niagara Falls Chamber of Commerce.

### The Border Cities

In all, the border cities of Ontario, including Ford, Walkerville, Windsor, Sandwich and Ojibway, have now 206 operating industries. Considerably over 50 per cent. of these are purely American. Most of the remainder are Canadian-American. Forty-four of our 206 industries located with us during 1919—all of them American. During the year just closed thirty-one others have come in, also all American.

At present, we are negotiating most encouragingly with no fewer than seventy-six additional American concerns, about one-third of which have definitely intimated their decision to locate with us when conditions revert to the more nearly normal. We are also busy with eighty-six other United States industrial prospects, most of which are shaping so hopefully that they will soon be entitled to inclusion in our "Live Prospect" class.

From the foregoing you will gather that we have little to complain of. Rather, have we much cause for encouragement—perhaps for congratulation. Indeed, it is safe to state that within the past few years the general progress of these border cities has been phenomenal in a sense beyond denial. It is so astonishingly obvious on every hand, and will particularly surprise those who may not have been here for a year or two. As a matter of fact, the wholly exceptional rapidity and nature of our growth has not yet been grasped by our friends in centres further east. Perhaps this is because most of it has its source in the United States. Ours has not been merely development. It has been transformation. We have literally leaped from the town category into the truly metro-

politan, doing so upon the most substantial of all foundations—actual industrial expansion.—F. Maclure Sclanders, Industrial Commissioner.

### Sarnia's Record

The year 1920 has been an exceedingly prosperous one for Sarnia. The industries are basic in character, i.e., oil refining, salt, agricultural implements, stoves, lumber and building materials. These have all had record seasons and several new industrials have been added. The Holmes Foundry Co., manufacturing motor castings, doubled their plant this year and laid the foundation for another 50 per cent. addition. The Perfection Stove Co. also largely increased their payroll. The Mueller Manufacturing Co., manufacturing brass, water and gas goods, added new lines connected with the motor trade.

New industries established during the year include the National Engineering Co., capital \$100,000, who are filling a large contract for automobile tire pumps and who also manufacture metal shop fixtures and the Neco Milk Condenser; the Sarnia Cement Products Co., cement building supplies; John Hayne, manufacturer of cooperage stock and finished barrels, at Point Edward.—J. M. Macadams, manager, Chamber of Commerce

### Woodstock Has Busy Year

During the past year a Canadian branch of the De Long Hook and Eye Co. was established here. Also the Kennedy Car Liner and Bag Co. purchased the William Stone Co. factory. The newly organized Karn Piano Co. commenced operations in the Karn factory. A few days ago arrangements were completed with the American Ironing Machine Co., Chicago, to establish their Canadian branch in Woodstock. They anticipate operating their plant here about March 1st, and will make Woodstock their head office for Canada. The heads of industries are quite optimistic as to the future, and are looking forward to the factories being busy as usual in a short time.—H. J. Sykes, secretary-treasurer, Board of Trade.

### St. Thomas Industries

During the year the Thos. A. Edison, Inc., purchased the plant and buildings of the St. Thomas Cabinets, comprising about one hundred thousand feet of floor space, and this company, which will be known in Canada as the Canadian Edison Phonographs Ltd., will begin operations about the first of the year. It is their intention to build two additional wings to the building now occupied.

Hitch Bros. of Canada, manufacturers of wooden vehicle toys and the Universal Wall-Paper Hanger, and the Provincial Machine and Supply Co., manufacturers of phonograph hardware, were incorporated early in the year, and are now producing. The E. T. Wright Co., manufacturers of "Just Wright" shoes, have disposed of their plant and business to the Talbot Shoe Co., Ltd. The Canada Iron Foundries have spent \$150,000 in extending their plant this year, and anticipate further extensions in 1921.—J. L. Lodge, secretary, Board of Trade.

### Sault Ste. Marie

During the past year practically all branches of industrial activity have been working at full capacity, notably the plants of the Spanish River Pulp and Paper Mills Ltd., the Algoma Steel Corporation, Dominion Tar and Chemical Co., and Standard Chemical Co. Wholesale and retail trade has been exceptionally good and, in spite of the recent slump in prices, there is not a single vacant store or warehouse in the entire business section of the city.

Notwithstanding the high cost of labor and materials there has been considerable building activity in industrial, business and residential sections. The Algoma Steel Corporation, whose investment in Sault Ste. Marie is at present approximately \$45,000,000, has begun work on a \$7,000,000 addition which will be devoted to the manufacture of structural steel.—Secretary, Board of Trade.

## Province of Nova Scotia

### SOME FIGURES TO INTEREST BUSINESS MEN

VALUE OF PRODUCTS, FOR THE YEAR 1919

Coal	\$25,000,000
Coke and By-Products	5,771,000
Gold and Other Minerals	316,000
Gypsum, Limestone, etc.	938,000
Building Materials and Clay Products	1,888,000
Iron and Steel Products	19,000,000
Fisheries	14,350,000
Shipping and Manufactures	56,260,000
Products of the Farm	51,034,000
Products of the Forest	16,965,000
Game and Furs	675,000
	<b>\$192,197,300</b>

The industrial ascendancy of Nova Scotia is based upon its immense deposits of minerals, its great forests, its rich farms and orchards, its fisheries, its waterpower and its strategic commercial situation as the Atlantic "Gateway to Canada." The easy facility with which these rich natural resources can be made the wealth producing servants of Brain, Capital and Labor has contributed to the phenomenal creation and growth of industries throughout the Province.

The far-seeing promoters of that great Empire-wide Steel Corporation seem to have justified the belief that Nova Scotia is destined to be one of the great work-shops of the Dominion.

# Western Provinces Are Growing Industrially

Expansion is Slow But Healthy—Promising Possibilities of Alberta Coal and Oil Fields—British Columbia Ports Facilitate Greater Export Trade—Advantages of Pacific Coast Are Many

**I**NDUSTRIALLY the west is growing. While the expansion is slow it is healthy, and the indications are that within the next few years some important and rapid developments will take place. In the prairie centres the best future appears to rest in the more intensive agricultural development, but at the same time a greater development of flour milling, creamery products, live stock products and other manufacturing based upon local raw materials is expected. The coal and oil fields of southern Alberta and their relation to growing industry also deserve consideration.

## Winnipeg Growing Industrially

The year 1920 has been a satisfactory one for the city of Winnipeg. Building has shown a remarkable increase as compared with the past five years. New incorporations in the province of Manitoba exceeded one hundred million dollars. In some cases industries established are making use of the raw materials available in the Winnipeg district.

New industries established include manufacturers of farm implements, automobile parts, confectionery, hats and caps, trunks and valises, cereals, talking machines, paper boxes, paper, batteries, paints and varnishes, brooms, cut glass, etc. Winnipeg's municipal power plant has expanded considerably during the year. The Winnipeg River Power Company are now constructing a power plant on the Winnipeg River which will cost in the neighborhood of ten million dollars, and will furnish approximately 168,000 h.p. in addition to power now being supplied to the city. The first unit of this plant is now being built.

The production of hemp in the Winnipeg district was commenced during the year. A company was organized with the assistance of the board of trade for the purpose of sowing 500 acres of hemp at Niverville, Man.—Secretary, Winnipeg Board of Trade.

## Regina's Progress

Despite adverse conditions created by the enhanced cost of material and labor the city of Regina has experienced a large amount of industrial progress. Commodious warehouses have been erected by Wood-Vallance Co., Fairbanks-Morse Co., Goodyear Tire Co. and the Saskatchewan Co-operative Creameries. The Leader publishing Co. have also added to their holdings a large storehouse.

Other construction during the year embraces the new Presbyterian Carmichael Church, built at a cost of \$40,000; power house at the Parliament Buildings, four-storey business block of the Regina Trading Co., New Capitol Theatre, and upwards of 200 residences. Projects for next year include a distributing house for Canadian Swift Co. and a college to be erected by the Lutheran body.—Chas. C. Cooke, secretary-manager, Board of Trade.

## Moose Jaw Outlook Good

Roman's Machine and Repair Works opened up a large and well-equipped iron foundry and are doing a large volume of business. The Mid-West Packing Co., Ltd. was organized, acquired suitable premises which are being remodelled and equipped for business, and it is expected that operations will commence early in the New Year. The Mid-West Oil Co., Ltd., opened up a small refinery and lubricating grease compounding plant and are doing an excellent business. The capital investment of some \$50,000 has already abundantly justified itself.

Toner & MacBride, two experienced box and crate makers, opened up a small factory in August but found orders so plentiful that they were compelled to acquire very much larger premises, install additional power machinery and increase their staff after less than two months. The venture has proved entirely successful and the future outlook is very bright. The Walter W. Shaw Co., Ltd., manufacturing high-grade choco-

lates and confectionery, has installed a considerable amount of new machinery, including a modern water-softening plant, a large freezing plant and equipment that turns out the popular "sucker" by the thousand.—Industrial Commissioner.

## Building Good in Saskatoon

So far as the greater portion of the Saskatoon trading territory, which is very large, is concerned, the crop has been better than for several years. The main consideration, however, was not the crop but the movement of the crop, and in this regard farmers experienced considerable difficulty.

Building was exceptionally good, as evidenced by the following principal constructions: Coca Cola Co., \$20,000; Franklin Garage, \$12,000; Chevrolet Garage, \$15,000; Y. M. C. A. hut, \$20,000; Roy Garage, \$15,000; Auto Garage, \$20,000; Barries' (Ltd.) store, \$20,000; addition to C. P. R. station, \$20,000; Riddel Carriage and Motor Works, \$20,000; Green Court apartment house, \$20,000; Imperial Bank alterations, \$15,000; dry-cleaning establishment, \$20,000; Quaker Oats Co., Ltd., additions, \$86,000; physics building at university, \$403,000; Mayfair school, \$184,000; C. N. R. roundhouse, \$45,000; new skating rink, \$25,000.—G. Graham, commissioner, Board of Trade.

## 1920 at Prince Albert

The Burns plant has trebled since last year, besides adding a creamery and butter-making industry to their already large plant, making the Prince Albert plant amongst their largest. A new sash and door factory was started this year and doing a big business, shipping their products to the surrounding towns and districts, increasing their staff from time to time and working overtime.

The new automobile body and top factory is also doing well and are enlarging their quarters for the many orders they have on hand, and promises to be made one of the best industries in the city. The provincial stock yards are still adding to their already very large buildings and are acquiring more land, which at present covers over 43 acres.

The city has spent some \$65,000 on additional pumping facilities and storage to the power plant and water system, making our water and power system one of the best in the province.—J. H. Mitchell, secretary, Board of Trade.

## Commercial Development in Edmonton

Commercial development in Edmonton during the present year has been very pronounced. In addition to a considerable number of new firms which have been established in the city, both manufacturing and distributing, many important additions have been made to plants and warehouses already established. One of these is the erection of a nine-storey warehouse for Marshall Wells, Alberta, Ltd., this building being the largest warehouse devoted to one line in Western Canada outside of Winnipeg. It is expected that the building will be ready for occupancy about December 1st. It will be one of the most complete and best-equipped buildings of its kind in the country.

Work has also been started on an addition to the already large warehouse of Revillon Wholesale, Ltd. The plans for this building will make it, when completed, the largest commercial warehouse in the Dominion, with 11 acres of floor space, a frontage of 350 ft. by 150 ft. in depth, nine stories high. Another important development is the erection of a new factory for the North West Biscuit Company at a cost of \$500,000. This company is already the second largest exclusive biscuit factory in Canada and the new building will have double the capacity of that at present occupied.

Perhaps the most important development in the commercial life of Edmonton during the year has been the acquisition by lease of the Edmonton, Dunvegan and British Columbia

MONTREAL

TORONTO

WINNIPEG

Railway by the C. P. R. The inevitable result of this will be a very greatly improved service to the Peace River and Grande Prairie countries, followed by a great influx of settlers and business men to that fertile region of which Edmonton is the natural distributing centre. A great number of new settlers have gone into the Peace River country this year and from present prospects this number will be very materially increased in 1921.—A. M. Frith, secretary, Board of Trade.

#### Calgary's Progress

Calgary during the past year has shown steady progress in nearly all lines of activity. New wholesale and distributing houses have been opened up in the city, and new industries started. Notwithstanding the increased cost of materials and labor, building permits show a healthy increase.

At the present time two large modern picture theatres are under construction and will be completed during the next few months. Five new schools have been built this year and were recently opened, but the present accommodation is still insufficient in some parts of the city.

Most of the leading coal mining companies in southern Alberta have their head offices in Calgary and it is gratifying to be able to report that the output of coal in this part of the province, particularly in the Drumbeller district, has been greatly in excess of any previous year. This, of course, is due to the new markets opened up and it is expected that in future Alberta will supply a much larger percentage of the coal consumed in Manitoba and Saskatchewan than in the past. The live stock industry is now, as indeed it has always been, an important factor in the business life of Calgary. During the year the Alberta Stock Yards Co. have completed, at a cost of \$400,000, improvements and additions to yards and built new offices. They have also secured an additional 60 acres of land in order to provide for future expansion.—Secretary, Calgary Board of Trade.

#### Victoria's Industrial Development

Victoria, the capital city of British Columbia, stands in a strategically important position in relation to the development of Pacific Ocean trade. This fact is becoming more widely recognized as commerce upon this greatest of oceans increases, and as a natural sequence of events it cannot be long before Victoria takes its place as one of the leading trade centres on this coast. The peculiarly fortunate geographical position is one of the chief arguments in its favor as a manufacturing centre for products for overseas markets. The city stands at the inner entrance to the Straits of Juan de Fuca, that water highway upon which travel to-day ships from every port in the world, seeking the cities of Puget Sound and those which lie along the British Columbia mainland coast and the eastern coast of Vancouver Island. These vessels represent large and ever-growing volumes of trade, which must assume enormous dimensions within the next decade. Victoria is prepared to handle that trade and is making preparation to cope with it in proportion to its growth. Ocean docks, car-ferry connections, dry docks, railway lines completed and building form part of the *raison d'être* of the city's ability to take care of whatever may offer.—Victoria and Island Development Association.

#### Vancouver Gaining Rapidly

Conditions in Vancouver indicate a continued growth in population and in industries. In the last few months a number of new homes have been started and we have every indication that building will continue to a moderate degree throughout all winter. Contractors expect that with more moderate prices in building material of all kinds spring will see much greater activity in providing housing for the ever-increasing population.

Industrial Island, the reclaimed centre of False Creek, in the very heart of the business district of Vancouver, has sprung right into operation with industries so varied that they are worth specifying: Ceramics, paint, glass, cement bricks, steel and wire, boilers, engines, ship machinery outfitings, fish-canning, pickle bottling, water-power wheels, ready-made

roofing, refining and manufacturing of talc products, sheet metal, ventilating and blowing equipment, hide tanning, electric switch fuses and fixtures, saws, carbonic acid gas for aerated waters. Besides these there are the older lumber industries and manufactures on the north and south banks of the creek, big shipyards, steel and metal works, that are not of such recent erection. Harbor improvements comprise the building of two new piers at a cost of \$6,000,000 each, and additions to other docks; building of tugs and ferries for harbor use, and continual dredging and keeping in repair.

Immigration to British Columbia continues good and of the right character, for the major portion of those coming desire to go on the land. Farmers from the prairies who are selling out at good prices to American newcomers are moving to the northwestern part of British Columbia. There have been a good number who have come in mainly to get grazing or mixed-farming lands. From the Old Country a number of families have arrived to take up small holdings for fruit or other farming.—J. R. Davison, publicity commissioner.

#### New Westminster

New industries established in New Westminster, B.C., during 1920 were as follows:—

Acetate Products, Ltd., to manufacture wood alcohol, acetate of lime, charcoal and pitch. Supplies of alder wood to be used in this industry can be obtained in abundance from the Fraser River valley.

Canada Western Cordage Co. was established to manufacture rope, binder twine and similar products. Eight hands are employed.

Cut-to-Fit Building Co. located in the city, supplying material for construction of buildings.—A. W. Gray, secretary, Board of Trade.

#### Big Year for Brandon

The year 1920 has been a big one for Brandon, as far as the industrial development of this city is concerned. The Imperial Oil Company will erect a \$350,000 plant here, several large tanks and a warehouse covering over a city block being among the buildings to be erected. Possibly, one of the largest deals was that of the sale of the Gordon-Mackay building to the Massey-Harris Company, Ltd., for a price said to be \$130,000. The big machinery firm plans to locate a large distributing plant here, and will take advantage of the many facilities this city offers as a shipping centre for western Canada.

Vivian and Windle, a large wholesale grocery firm from Regina, located here and opened up a big warehouse. Several smaller houses also located in Brandon this year, while some deals are pending at the present time which will bring at least one more large machinery concern to this city.—H. L. Crawford, secretary, Board of Trade.

#### Lethbridge Business Good

Coal mining has had a year of record prosperity. Strikes have interfered with production but little, and the Lethbridge and Crow's Nest Pass fields adjoining have produced in the neighborhood of 2,500,000 tons, valued at more than \$12,500,000 at the mine mouth. There has been a steady demand for coal throughout the year, while there has never been a car shortage. Mercantile business throughout the year has been good, and merchants are now busily engaged moving their old stock, preparing to put their lower-priced spring goods on the shelves. The old stock is moving rapidly at the reduced prices, showing that the buying public has been waiting for the price adjustment.

Though last winter was a severe one on live stock, losses through sacrificing breeding stock and through lack of fodder being heavy, herds have come through the summer in fine shape and there is an abundant crop of hay for this winter. Rebuilding of herds, taking advantage of the low prices, has started in a small way. Sheepmen of southern Alberta have shipped two million pounds of wool this year at a prevailing price of 38 cents average for the sixty per cent. of the clip which has been sold.—Lethbridge Board of Trade.

## BRITISH COLUMBIA

# CHEAP POWER

Canada's Pacific Coast cities, Vancouver, Victoria and New Westminster offer manufacturers the advantages of cheap power, ideal climate, good transportation, raw materials and market.

## 133,700 Horse Power

 SIR H. MONTAGU ALLAN, Montreal

W. S. CHADWICK, Secretary Treasurer.

## This is our record— Do you Know a better one?

In 40 years' operation, all surplus earnings have gone, not to shareholders, but back into our business to buy more plant and so to earn more revenue.

Not a drop of water in our stock! Money spent on telephone plant exceeds stock and bond liability by over 16 millions.

Each share of stock sold from the beginning has averaged \$106.00 per hundred dollar share.

Dividends to shareholders have averaged less than 8 per cent, and have never exceeded 8.

And our subscribers have got more for the money they have paid us in telephone rates than those of any other system we know of anywhere.

Our problem is the problem of utilities everywhere. Regulation fixes the price we must charge for our service, it does not limit the price we must pay for wages or supplies.

Fair minded people concede that adequate rates and adequate service must go hand in hand.

The Bell Telephone Co. of Canada

# Industrial Development in Maritime Provinces

Nineteen-Twenty Was Not a Very Eventful Year—Progress Was Healthy—Readjustment Slackened Operations Toward the End of the Year—Winter Outlook for Coast Parts is Cheerful

**I**NDUSTRIALLY, 1920 was not a very eventful year for the maritime provinces. There was healthy progress, but the developments were not large. The business readjustment, which has hit practically the whole world rather forcibly, made itself felt towards the end of the year, but the outlook for the winter is cheerful, particularly for those cities which are situated on the Atlantic coast, and which receive Canada's winter shipping.

Prince Edward Island, which is largely dependent upon its natural resources rather than its manufacturing, had a successful year. Fox farming, the principal industry of the province, made satisfactory progress, while the general farming conditions were good.

## Steel Industry at Sydney

As far as industrial developments were concerned, Sydney, N.S., had a quiet year. The Dominion Steel Corporation, the city's principal industry, extended its operations largely, but outside of this nothing eventful occurred. In February, 1920, the new 110-inch plate rolling mill was placed in operation. This new department involved the expenditure of approximately \$5,000,000, and has a capacity of approximately 12,000 gross tons monthly sheared plates up to 96 inches in width. Since the beginning of operations it has been shipping its entire production to the Canadian government, with which the company has a contract for from 50,000 to 75,000 tons of plates per year for five years.

In the early part of the year the first two units were placed in operation in the company's new power-house, which has been erected at \$1,250,000, and which, when completed early this year, will have a maximum capacity of approximately 10,000 k.w. This additional power will permit the electrification of some of the producing departments that have heretofore been using steam, and will enable the company to produce its electric power requirements at the lowest possible cost per k.w.h.—Secretary, Board of Trade.

## Halifax, N.S.

It could not be expected that the great prosperity of the war period could continue indefinitely, but I must say I do not think any of us anticipated such a sharp curtailment in practically all lines of industry and trade as has occurred in the past three months. The bursting of the sugar bubble of itself has had far-reaching results, and has particularly affected Halifax and Nova Scotia by further depressing the export trade in lumber, fish, potatoes, etc., in addition to which there is the bad effect on sail tonnage, in which a large amount of Nova Scotia capital is tied up.

The retail trade, notwithstanding price reductions, finds the general public shy in buying. There appears to be abroad a mixture of extravagance and economy, which I might instance by the fact that, while most of the young men and most of their fathers are eagerly buying \$10 to \$25 hats, plus luxury taxes, most of their fathers and some few of the sons are economizing by clinging to their old shoes, having their old suits turned, etc. Up to the present, no economy is noticeable in the use of motor cars or articles of food. However, I have not recited the above through pleasure of telling any tales of woe, but rather to take this opportunity to state that trade conditions with us compare favorably with those of our neighbors to the south. Canada, and Nova Scotia in particular, with its tremendous natural resources, can stand reverses better than any other nation in the world; therefore, let us meet the changing conditions with courage and a resolve to carry on to the best of our ability, with assurance of winning out. In the great war Canadians earned an enviable reputation and world-wide fame for these same qualities, and I venture to predict that Canada will come through this great reconstruction period as well, if not

better, than any country on earth. I will close this part of my remarks by saying that, from a commercial standpoint, the need of the hour is the careful expenditure by the country as a whole and by the individual for necessities, with the cutting out of the useless waste and indulgence in luxuries, which latter had characterized the past six years, and is still the prevailing and fashionable custom.—President, Board of Trade, in his last quarterly report.

## Charlottetown, P.E.I.

The only new industry to be established here during the past year was a flour mill with a capacity of 150 barrels per day. This mill, while not a large one, is equipped with the latest machinery, and electrical power is used throughout. This mill is owned and operated by the Charlottetown Milling Co., Ltd.

Bruce Stewart and Co., Ltd., machinists and boiler-makers, have erected a large machine shop to accommodate their ever-increasing trade, especially in imperial marine motors, which are now being shipped all over the world.—Wallace L. Higgins, secretary, Board of Trade.

## Canada's First Winter Port

The Clark Company, of Bear River, N.S., have acquired properties at Glen Falls, adjacent to Courtenay Bay, and propose establishing an industry for the manufacture of fibre cases. They have also in view a pulp and paper plant in the same locality.

The Nashwaak Pulp and Paper Company, whose mill is on the west bank of the St. John River, alongside the reversing falls, have made some additions and improvements to their plant the past season, and have arranged with the city for an increased water supply in order to increase their production. The Atlantic Sugar Refineries, Ltd., whose plant, up until a few weeks ago, was one of the busiest in Canada, is now resting, pending an adjustment of the sugar situation. During the past year additions and improvements, involving an expenditure of approximately a quarter million of dollars, have been made to the Atlantic plant.

The machine plants of the city have not been working to capacity, due in a measure to labor demands, which were made some time ago, but which the employers felt they could not grant. Lime manufacturers have been quite busy of late. The plant of the Provincial Lime Company at Brookville, which was burned a short time ago, has been rebuilt and is now in full operation. The provincial government has established a lime plant in the same vicinity to provide lime for agricultural purposes. The condition of the overseas market has had a disturbing effect upon the lumber industry and has tended greatly to limit production. It is doubtful if the lumber cut this winter will attain its usual proportions.

The Portland Rolling Mills plant, which has been operated under the control of the Bank of Nova Scotia for some years past, has been purchased by a new company, who have changed its name to the New Brunswick Rolling Mills. This firm is now manufacturing a number of lines of metal products. There have been some changes in the spice mills of the city within the last few months.

The shipping interests of the port are looking forward to a good winter's work. In anticipation of increased immigration another story has been added to the immigration building on the western side of the harbor. To facilitate the movement of grain, another grain conveyor has been added to the west side terminal equipment. There are now seven steamship berths on the west side with grain conveyors attached. These are connected with the C.P.R. elevator. On the east side of the main harbor the C.N.R. has two grain berths. They hope shortly to add four more.—R. E. Armstrong, secretary, Board of Trade.

# PROVINCE OF QUEBEC

**T**HE province of Quebec occupies a leading place in the pulp and paper industry, and for its production of asbestos.

Its forests cover over 130,000,000 acres, and are well stocked with game. Its lakes and rivers contain great varieties of fish.

**Water power available 10,000,000 horse-power.**

**Water power developed 900,000 horse-power.**

In the industrial as well as the agricultural field the province has a steady and sound expansion. The stability of its labouring class is an example to all.

The following are some recent statistics on the economic development of the province:—

Annual value of industrial products -	\$900,453,967
Annual value of agricultural products	307,994,000
Annual value of dairy products -	31,000,000
Annual value of forest products -	40,761,730
Annual value of paper products -	34,167,937
Annual value of mineral products -	20,701,005
Annual value of fisheries - - -	3,414,378
Annual value of maple products -	6,396,535
Annual value of tobacco production -	7,200,000
<hr/>	
Population of the Province - - -	2,500,000
Population of Montreal - - -	800,000
Population of Quebec - - -	125,000
<hr/>	
Debt per capita - - - - -	\$16.73

# Quebec Province as Manufacturing Centre

Montreal Harbour the Greatest Asset—Hydraulic Resources Contribute Largely to the Upbuilding of Industry—Quebec and Sherbrooke Live Business Centres

THE province of Quebec, one of Canada's premier manufacturing provinces, has just completed a year which has been more or less eventful. In industry, the latter part of the year was marked by a slowing up, as was general all over the continent, but the beginning of 1920, and up to the late summer, was very prosperous. Nature has been very generous to the province in the way of hydraulic resources, and it is to this that Quebec owes a great part of its growth. It is estimated that the province has nearly 7,000,000 h.p. scattered over the different parts of its territory, but up to the present only a small part of this has been developed.

Perhaps the greatest asset of the province is the port of Montreal. To list the developments in the city during the year, would be impracticable here, as they are naturally numerous in a community so situated and with such facilities. The growth of the city, however, can be readily gleaned from the tables of bank clearings and building permits given elsewhere in this issue.

## Montreal's Great Harbor

While Montreal is such a great city, very few people, outside of its residents, have any idea of the extent of its facilities. Perhaps the most credit for the growth of the port, is due to the Board of Harbor Commissioners, which body is devoted to the upbuild of the industrial part of the city. The harbor, of course, is Montreal's one great asset, and it is to this that the city owes its position in the commercial world.

The harbor extends for a distance of 17 miles on both sides of the St. Lawrence River, has in its central part 100 steamship berths, from 350 to 750 ft. in length, one-third of which are at concrete wharves, has modern grain elevators with conveyor system to 15 steamship berths, from which nine vessels can be loaded at one time. There are 23 permanent fireproof transit sheds, and 58 miles of railway trackage along the river front, enabling quick despatch of freight both inward and outward. The grain handling facilities of the port are excellent. Three elevators, constructed by the board, have a storage capacity of approximately 9,000,000 bushels, and from these eleven vessels may simultaneously receive grain at the rate of 15,000 bushels per hour.

## Warehouses for Storage

The Harbor Board prepares for the future, and constantly endeavors to secure new traffic as well as to provide better accommodation for that now contributory to the port. A huge warehouse, with cold storage facilities, is under construction, to be operated in the same way as the main elevators, that is, at bare cost. This warehouse is planned on an extensive scale. It will be a receptacle for imports awaiting distribution, for exports awaiting ships, and for perishable products, both inward and outward, which require a period of cold storage for one or another reason to preserve their condition. This warehouse will be available for use the year round, during the closed as well as the open season of navigation, and will be of special advantage in the periods immediately succeeding and preceding the open season. The electrification of the harbor railway system is in contemplation, and will be shortly begun. During the war new construction was necessarily slowly proceeded with; and, as a consequence, it is intended to proceed with greater expedition in completion of the plans the Harbor Board has now in hand.

## Sherbrooke Breaks Records

Sherbrooke has broken all previous records as well as leading the province in industrial expansion and new construc-

tion for 1920. Permits for buildings for the first nine months a modern gas plant; Julius Kayser & Co.'s new factory, at a of this year aggregate \$3,318,178. The new constructions are cost exceeding \$1,000,000; Canadian Connecticut Cotton Mills' extension will exceed \$2,000,000; Canadian Sturdy Chain Co., Sherbrooke Machinery Co.'s extensions. The other new industries are: Superheater Co., Ltd., the Regal Tire and Rubber Co., Ltd., Cluett, Peabody & Co., English and Scotch Woollen Co., Pressure-Proof Rings Co., Ltd., J. H. Bryant, Ltd., and fifteen new commercial buildings, including three new bank buildings. A technical school will be built at the cost of several hundred thousand dollars. Municipal hydro-electric power development at Two Miles Falls, at an expenditure of over \$500,000, will provide 5,000 additional horse-power for new industries. Sherbrooke has over 60 industries and its manufactured products total over \$50,000,000 per year. There are ample housing facilities to accommodate all the labor required to work all the plants now standing. In addition the city is now spending over \$600,000 on a model city suburb of working men's dwellings, and the programme calls for 200 houses of modern design. The labor situation was never better. All kinds of labor is available, including male and female, both skilled and semi-skilled; the working man is happy and contented in this section of the country; no foreigners or bolsheviks in this locality. Our labor population understands that capital is absolutely necessary, and capital knows that labor is equally needed, consequently with this reasoning strikes are foreign to our people.

Sherbrooke possesses all the accessories for successful manufacturing, with special inducements offered to new industries by the civic authorities, such as exemption of taxes for a period of ten years, public improvements which may be required such as extension of streets, sidewalks, waterworks and sewerage, etc.; hydro-electric power at  $\frac{3}{4}$  of a cent per k.w.h.—J. H. Brosseau, secretary-treasurer, Board of Trade.

## Quebec Industrial Survey

During the year 1920, although the prices prevailing on construction material and labor were rather high, important additions and alterations to some of the factories were executed. Some twenty-five permits were given at the city hall, representing an expenditure of over \$750,000, the principal being the Champlain Brewery Co., Ltd., Quebec Preserving Co., Ltd., preserves and canned goods; Parisian Corset Co., Ltd., Lagace & Lepinay, shoe manufacturers; J. H. Gosselin, shoe manufacturer; Gale Bros., Ltd., shoe manufacturers.

La Cie. Jos. Lefrancois, Ltd., saw and planing mill, which was burned out last June, has been reconstructed on a larger scale and the building will be practically fireproof. Some very important garages have been erected during the year, four of them being fireproof construction, the outlay representing about \$250,000.

The power situation in and around the city of Quebec is very good. At the present time the two companies supplying power to the city are advertising some 25,000 h.p. available for immediate delivery. Further developments could be completed at short notice. The city of Quebec has, in virtue of its charter, power to exempt from taxation for a period not exceeding ten years any new industrial company duly organized making application to the finance committee to obtain the privilege. It has been decided at a meeting of the above committee held last June to grant the privilege in the future subject to the following conditions: The exemption will be for the real estate tax only. The value of the plant erected will be established by the city tax assessors when completed and the company will pay tax only on 10 per cent. of the value for the first year, 20 per cent. the second year, up to the full amount the tenth year. No bonuses of any kind are considered.—Secretary, Board of Trade.

## More Than Seven Millions of New Banking Capital

This Increase During the Past Year is Supplemented by Addition of Over \$5,000,000 to Reserves—No More Authorizations in 1920—Comparison of Bank Capital and Reserves for Past Few Years

**S**UBSTANTIAL additions to the amount of capital employed in the banking business were made during the past year both by new stock subscriptions and by appropriations from profits to reserve. During the year ended October the additions were \$9,594,125 to paid-up capital and \$6,935,769 to reserve. There was no change in the authorized capital of the banks, the new subscriptions following upon authorizations already granted. Additions to subscribed and paid-up capital and reserve during the twelve months under review, by banks, total as follows:—

	Capital subscribed.	Capital paid up.	Reserve.
Montreal .....	\$2,000,000	\$2,000,000	\$2,000,000
Nationale .....	.....	.....	100,000
Merchants .....	1,799,100	1,614,435	1,400,000
Provinciale .....	1,000,000	939,719	100,000
Union .....	1,302,100	1,365,040	1,018,744
Royal .....	3,082,400	2,711,040	1,405,520
Hamilton .....	965,200	903,010	651,505
Hochelaga .....	.....	.....	100,000
Home .....	.....	11,417	100,000
Sterling .....	.....	3,565	50,000
Weyburn Security .....	.....	45,899	10,000
Totals .....	\$10,148,800	\$9,594,125	\$6,935,769

Substantial though these amounts appear, it is the opinion in some quarters that they should have been larger. It is contended that the great expansion in banking business during the past few years has not been accompanied by a corresponding increase in capital funds. In August, 1914, the paid-up capital and surplus of the Canadian banks totalled \$226,000,000, and the deposits were \$1,091,000,000, the ratio of the former to the latter being 20.8 per cent. In October last the combined capital and surplus was \$257,682,757, and the deposits \$2,298,882,765, a ratio of only 11.2 per cent.

### Authorized Capital

A review of the capital growth during the past few years is interesting. During 1917 there was only one increase in authorized capital, when in March of that year the Banque d'Hochelaga had its authorization increased from \$4,000,000 to \$10,000,000. The Quebec Bank was taken over by the Royal; its authorized capital was \$5,000,000. During 1918 there were no increases in authorized capital, and through the dropping out of the Bank of British North America and of the Northern Crown Bank the total authorized capital of Canadian banks decreased from \$189,866,666 to \$179,000,000.

During 1919 the following increases were authorized:—February, Bank of Montreal, \$25,000,000 to \$28,075,000; March, Union Bank, \$8,000,000 to \$15,000,000; May, Bank of Nova Scotia, \$10,000,000 to \$15,000,000; July, Merchants Bank, \$10,000,000 to \$15,000,000; October, Provinciale, \$2,000,000 to

\$5,000,000. This is a total of \$23,075,000, but in May the Bank of Ottawa was absorbed by the Bank of Nova Scotia, and after its authorization of \$5,000,000 is deducted the net increase is \$18,075,000.

### Subscribed Capital

In 1917 the Royal Bank increased its subscribed capital by \$911,700; that of the Standard was increased by \$40,800, and that of the Weyburn Security by \$10,000. The elimination of the Quebec Bank with a subscribed capital of \$2,735,000 reduced the total from \$113,863,966 at the end of 1916 to \$112,091,466 at the end of 1917.

During 1918 the following additional stock was subscribed: Standard, \$26,900; Weyburn, \$6,000; Montreal, \$2,903,800; Royal, \$1,088,300; and the Bank of British North America and the Northern Crown Bank, with subscribed capital of \$4,866,666 and \$1,431,200 respectively, dropped out, making a net decrease of \$2,272,866.

Larger amounts still were subscribed in 1919, no less than eight out of the 18 now existing banks opening their books for further subscriptions. The total subscribed (par value) up to the end of October was \$12,312,700. The amalgamation of the Bank of Ottawa with the Bank of Nova Scotia on May 1st effected a reduction of \$4,000,000, so the net increase during the first ten months of the year was \$8,312,700. The additions for the 10 months were as follows: Montreal, \$1,096,200; Nova Scotia, \$3,200,000; Merchants, \$1,400,000; Provinciale, \$1,000,000; Union, \$1,697,900; Royal, \$2,911,100; Hamilton, \$1,000,000; Weyburn, \$7,500.

Growth of the authorized and subscribed capital month by month for the past two years is shown in the following table:

	Capital	
	Authorized	Subscribed
1919 —		
January .....	\$179,000,000	\$110,492,200
February .....	182,075,000	111,335,200
March .....	189,075,000	112,401,700
April .....	194,075,000	114,927,400
May .....	189,075,000	115,784,700
June .....	189,075,000	116,360,000
July .....	194,075,000	116,599,100
August .....	194,075,000	116,665,200
September .....	194,075,000	117,602,800
October .....	197,075,000	118,131,300
November .....	197,075,000	119,522,300
December .....	197,075,000	119,522,300
1920 —		
January .....	\$197,075,000	\$119,522,300
February .....	197,075,000	119,522,300
March .....	197,075,000	119,522,300
April .....	197,075,000	121,522,300
May .....	197,075,000	122,855,100
June .....	197,075,000	127,302,800
July .....	197,075,000	127,901,400
August .....	197,075,000	128,183,500
September .....	197,075,000	128,280,100
October .....	197,075,000	128,280,100

## Capital and Reserve

During 1917 the dropping out of the Quebec Bank with a paid-up capital of \$2,735,000 was offset by new amounts of stock paid up in the other banks as follows: Royal, \$911,700; Standard, \$107,350; Home, \$724; Northern Crown, \$275; Sterling, \$4,776; Weyburn Security, \$37,610. These total \$1,062,435, the amount for all Canadian banks showing a reduction from \$113,346,341 to \$111,673,776.

A further reduction in the paid-up capital of Canadian banks is found in 1918, owing to the fact that the Bank of British North America, with a paid-up capital of \$4,866,600, and the Northern Crown, in which case the amount was \$1,429,447, were absorbed. Stock in the other banks was paid up with a par value as follows: Montreal, \$2,903,800; Royal, \$1,088,300; Standard, \$82,200; Home, \$272; Sterling, \$4,112; Weyburn Security, \$26,010; total of \$4,114,734, leaving a net reduction of \$2,181,379.

A total of \$12,182,905 was paid up in 1919, up to the end of October, and after deducting \$4,000,000, the paid-up capital of the Bank of Ottawa, an increase of \$8,182,905 is found. Additions during the ten months were: Montreal, \$1,096,200; Nova Scotia, \$3,200,000; Merchants, \$1,341,535; Provinciale, \$986,660; Union, \$1,634,960; Royal, \$2,875,850; Hamilton, \$983,760; Home, \$234; Sterling, \$6,375; Weyburn, \$57,331.

Coming to rest or reserve fund, we find in 1917 a net increase of \$717,350. The additions made were as follows: Banque Nationale, \$100,000; Banque Provinciale, \$50,000; Royal Bank, \$1,440,000; Standard Bank, \$107,350; Weyburn Security, \$20,000. These total \$1,717,350. The reserve of the Quebec Bank was \$1,000,000.

During 1918 the following additions were made: Montreal, \$2,540,825; Nationale, \$100,000; Provinciale, \$50,000; Union, \$200,000; Commerce, \$1,500,000; Royal, \$1,000,000; Standard, \$82,240; Hochelaga, \$100,000; Sterling, \$50,000; Weyburn Security, \$25,000; total, \$5,648,065. The reserve of the Bank of British North America was \$3,017,333, and that of the Northern Crown was \$715,600. These reduced the increase to a net of \$1,915,132.

Still larger additions were made during 1919, the total up to the end of October being \$12,261,736. The reserve of the Bank of Ottawa was \$5,000,000, so that the net increase for the ten months was \$7,261,736. The additions were as follows: Montreal, \$1,459,175; Nova Scotia, \$6,000,000; Nationale, \$100,000; Provinciale, \$200,000; Union, \$981,256; Royal, \$1,887,925; Hamilton, \$693,380; Ottawa, \$250,000; Imperial, \$500,000; Home, \$100,000; Sterling, \$50,000; Weyburn, \$40,000.

Monthly increases in paid-up capital and reserve since January, 1919, can be gleaned from the following figures:—

	Capital paid up	Rest or reserve fund	Total
1919—			
January	\$109,622,070	\$116,129,225	\$225,851,295
February	110,643,539	116,870,214	227,513,753
March	111,722,628	117,433,322	229,155,950
April	113,766,272	119,799,736	233,566,008
May	114,238,015	121,126,066	235,364,081
June	115,423,327	122,124,261	237,547,588
July	115,721,629	122,230,372	237,952,001

## STRATFORD LIFE UNDERWRITERS' ASSOCIATION

The annual meeting of the Stratford, Ont., branch of the Life Underwriters' Association was held December 10, with President Joliffe in the chair. Officers elected were as follows: President, S. C. Cooper, Northern; first vice, W. N. Harrison, of St. Mary's; second vice, H. R. Long, of Godrich, Sun Life; third vice, N. F. Kastner, Metropolitan; secretary-treasurer, L. E. Doherty, Sun Life, Stratford. Executive—H. B. McClellan, Aetna Life; M. J. Bailey, Prudential.

## FIDELITY AGENCY STARTS BOND DEPARTMENT

Announcement is made by Stanley Moss, president and managing director of the Fidelity Agency Corporation, Limited, that they will enter the bond market more actively in future. Heretofore the business of this firm has been confined almost exclusively to fidelity, fire and casualty insurance. Frank G. Lawson has been taken into partnership and will have the management of the new bond department. Mr. Lawson has been identified with Messrs. W. L. McKinnon and Co. since his return from overseas two years ago, and became known to the bond dealers' fraternity through his position as assistant secretary to the Ontario executive committee in the last Victory Loan campaign.

## CONTINUED CONTRACTION IN PAYROLLS

Dominion headquarters of the Employment Service of Canada, Department of Labor, reports that there was another substantial decline in employment during the week ended December 18, 1920, when it was reported by 4,753 firms that they had released 12,411 persons from employment since the end of the preceding week, a shrinkage in payroll of nearly two per cent. Firms in all industrial groups participated in these contractions with the exception of retail trade, which showed a net increase of 932 persons. The figures used in this report do not include loss of time due to strikes or lock-outs.

Increased employment as compared with the returns for the preceding week was reported in New Brunswick only, while of the reductions registered in the remaining districts that of 5,142 persons or nearly two per cent. in Ontario was the most decided. As compared with the returns for January 17, 1920, there were increases in the Maritime Provinces, Manitoba, and Alberta with large decreases in the other districts. For the following week firms in Nova Scotia anticipated having some recovery, but further losses were expected elsewhere.

The most noteworthy contractions in payroll were registered in the crude, rolled and forged, railway car and shipbuilding and sheet metal products divisions of the iron and steel industry, in the thread, yarn and cloth, garments and hosiery and knit goods branches of textiles, and in the seasonal industries, sawmills, building and railway construction. There was also less activity in abattoirs, furniture, brick, confectionery and biscuit, pulp and paper, musical instrument and chemical factories, in the mining group, railway and water transportation and logging. In the last named the decreases were occasioned by men leaving lumber camps for the holidays. While these shrinkages in payrolls were general in application those in Ontario and Quebec were in many cases largest. For the following week further substantial losses were anticipated.

There were 722 new companies incorporated in British Columbia during 1920. In 1919 there were 616, and in 1918 the incorporations numbered 347. Sixty-six extra-provincial companies were admitted to business last year.

# Loan and Trust Assets to be Fully Examined

Forms Prepared by Dominion Superintendent Require Statement in Great Detail—Returns Due March 1—Full Information Required Concerning Mortgages—Loans on Stocks and Bonds

(Special to *The Monetary Times*.)

Ottawa, January 12, 1921.

**F**ORMS on which annual statements of loan companies in Canada, as required under the provisions of the Loan Companies Act of 1914 as amended at the last session of parliament, have now all been sent to Canadian loan companies. They will have to be filled and returned by March 1. Forms for the trust companies have also been received from the printer, and will go out in due course to all Canadian trust companies as well. The form is not expected to differ radically in extent and form from that sent out to the loan companies.

The form is really a pamphlet in size, with a strong brown cover, and thirty-two pages inside. Twelve pages are devoted to questions concerning the companies, their history, financial resources, revenue, liabilities, etc., and the remainder of the form contains eleven schedules made out in such a way as to permit of companies filling in all details concerning the company's business. On the first page the loan company states its name, the Act and date under which organized or incorporated, the dates of amendments to its charter, and the date of commencing business. On this page also must appear the names of the president, vice-presidents, manager and secretary, as well as the address of the head office and the names of the directors. On the last half of the page appears the amount of capital authorized, the amount subscribed of preferred and ordinary shares, the amount paid in cash on preferred and ordinary stock, the latter being divided into the stock fully called, part called and instalment stock. The list of stockholders must be given on a separate schedule.

## Valuation of Assets

The next series of questions relate to the assets. First, the book value of real estate, less encumbrances, held by the corporation must be given. Separate lines are given for the book value of the office premises, the freehold land including buildings and the leasehold land including buildings. In a long schedule at the back provision is made for listing each individual property held by the corporation, with details as to dates when acquired, amount of encumbrances, actual cost as well as book and market values, the amounts expended for repairs and improvements on capital account, the gross income, taxes and all running expenses and the net income. Information is asked as to rents due and accrued, and as to amounts secured by first, second and subsequent mortgages, and agreements for sale as well as interest due and accrued.

The schedules asked for on mortgages are the most elaborate, and practically mean that the superintendent of insurance will have in his office details of the history and financing of every mortgage carried on the loan companies' books. This schedule is divided into four separate sections. The first asks a summary of mortgage loans classified as to province. The second one deals with loans secured by mortgages on land, and will require each corporation to analyse its mortgages on land in order to show the total principal and the total amounts of interest due and unpaid under six months and over six months with regard to five classes of mortgages.

"First mortgages under which no legal proceedings have been taken," comes first in the list. Then come second or subsequent mortgages (where prior mortgages are not entirely owned by the company) under which no legal proceedings have been taken. Then must be given the total sums asked for for all mortgages under which legal proceedings have been taken and are still unsettled (including loans where the mortgagee is in possession). The fourth

total asked for is the amount secured by agreements for sale or purchase of property not subject to prior mortgage, and the aggregate amount of the sale price of such properties, and the fifth asks for the same information when the agreements for sale or purchase of property are subject to prior mortgage or other charges. It also asks that the amount of such prior mortgages or charges shall be given. The third section of this schedule covers mortgage loans or agreements for sale or purchase of property which involve 2 per cent. or more of the combined paid-up capital and surplus of the corporation, and in any event in excess of fifty thousand dollars. Two or more mortgages secured upon the same property have to be included in this list if their combined totals bring them into this list. A separate list is also required of all mortgages on which interest is overdue more than six months or charges more than one year.

Similarly, a schedule asks all details concerning the amount of loans secured by stocks, bonds and other collateral. Bonds and debentures owned by the corporation have a special schedule to themselves as also do stocks owned by each corporation. Details of cash in banks, loan companies or elsewhere are also required, and all amounts of money, borrowed with or without security from chartered banks or other sources have to be shown. Special attention is given in a separate schedule to details of loans made to directors, the names of the latter and the securities offered. The last printed page is an affidavit form. Liabilities to the public and to the shareholders are the subject of a special list of questions. Analysis of income and expenditure must be given in detail in answer to many questions set forth, and there are as well twelve long questions to cover any information not included under other headings or schedules.

## REGINA LIFE UNDERWRITERS' ASSOCIATION

A successful year was reported by J. H. Taylor, retiring president of the Regina branch of the Life Underwriters' Association, which held its annual meeting December 11. L. E. Yingst, of the Sovereign Life Insurance Co., was elected president of the association for the coming year. Other officers elected were: Vice-president, M. B. Farr, Monarch; secretary-treasurer, K. P. Dunstan, Imperial. Executive committee—C. H. Hughes, Prudential; C. F. Dumfee, Great West; W. Craise, Excelsior; C. Woodley, Metropolitan, and G. A. Robinson, Mutual of Canada. Mr. Taylor announced that the first general meeting of the Provincial Association will be held in Saskatoon in March. The secretary-treasurer's report showed finances to be in a good condition and membership on a firm basis.

## Index for Volume 65 Ready

*The Monetary Times* index for the half-year ending December 31st, 1920, is now ready for distribution. Subscribers desiring this index will be furnished a copy upon request.

## SIGNS OF BUSINESS IMPROVEMENT IN WEST

Secretary of Winnipeg Board of Trade Shows Grounds for  
Optimism—Provincial Bank Deposits Grow and  
Security Values Rise

(Staff Correspondence)

Winnipeg, January 13, 1921.

With the opening of the new year there seems to be a better feeling in Winnipeg and throughout the west. Wholesalers report encouraging prospects for a good spring and summer season from out-of-town reports and points throughout the whole of the west. The signs of depression are gradually disappearing, and reports from many points are rather on the bright side.

It was feared by some people a few weeks ago that there would be an epidemic of failures throughout the west, but it is encouraging to note that so far there is no sign of anything in the nature of an epidemic. Failures are taking place, but these occur every year, and as far as can be gathered there appears to be no large number of failures in Western Canada.

The provincial savings bank system has made considerable strides since it was put into operation a few months ago. Deposits now exceed over one million dollars, and the opinion is expressed by government officials that the operations so far have been very successful. Two branches are now operating in Winnipeg, and there are also branches at Brandon, Portage la Prairie, Dauphin, Neepawa, Stonewall and Carman.

The unemployment situation in Winnipeg is not considered serious, and many openings are being uncovered for those out of work, and applicants are showing a willingness to take any work offered. T. R. Deacon, of the Manitoba Bridge and Iron Works, believes that normal conditions will prevail in a short time. He states that the 150 men laid off at the end of the year by his firm will be taken on within the next week or so. Motor business is at a standstill, and it is not expected that it will improve much for a couple of months.

In the local stock exchange there is a general upward movement in the prices of war loans and Victory bonds. To-day all issues showed an advance, with 1937 bonds being offered at par and selling at 99½. There is a steadily growing demand by small investors, local bond dealers report.

F. W. Russell, land agent of the Canadian Pacific Railway, who has just returned from a trip through the west, states that business men are optimistic regarding the future. Mr. Russell reports that inquiries from all parts concerning land in Western Canada received by the land department of the railway have been numerous and encouraging. Mr. Russell believes that the west is on the eve of a period of great land settlement, with the majority of settlers coming from the United States and the British Isles.

At the annual meeting of the Union Bank of Canada held in Winnipeg this week, very encouraging reports were presented of business for 1920. This strong western financial institution fills an important part in the business of the west. The staff of the bank now totals 2,313.

W. E. Milner, managing secretary of the Winnipeg Board of Trade, in reviewing business conditions in Winnipeg during 1920, said, "I never saw such a fever of pessimism as existed in Winnipeg and the west from July first to December fifth last year," he said, but declared that for all this feeling of depression he was prepared to show that Winnipeg and Western Canada were in better condition than any other country. In the matter of bank clearing alone Winnipeg stands twelfth among all the cities of the North American Continent. He quoted figures to show that Winnipeg has a postal revenue larger than that claimed by Montreal.

## CANADA LIFE MAKES BIG STRIDE IN 1920

That the unusual demand for life insurance which developed in 1919 continued almost throughout 1920 is evident from the seventy-fourth annual statement of the Canada Life Assurance Company, which was presented at the annual meeting held in Toronto on January 13. Policies issued during the year, including revivals, amounted to \$63,524,552, being by far the greatest volume of new business ever issued by the company in any year, and exceeding that of the previous period by \$17,143,778. The new paid for business, exclusive of dividend additions, totalled \$58,260,558, an increase over 1919 of \$16,618,681.

The total income during 1920 was \$15,729,307, which includes premium income, new and renewal, of \$11,265,906 (exclusive of payments made to companies for re-assurances); considerations for annuities, \$351,062; interest income, including profits from sale of securities, \$3,955,617; and income from other sources, \$156,722. The statement of receipts shows an item of \$2,000,000 not included in the above figures, and representing a bank credit used to purchase securities. Payments of \$8,254,883 were made during the year to policyholders and their representatives, and to annuitants. These payments were in settlement of death claims, matured endowments, dividends, cash values for policies surrendered, and annuities.

Under the strong basis of valuation adhered to by the company, it is shown that the policy reserves at December 31, 1920, amounted to \$63,664,740, an increase of \$5,598,467 as compared with the corresponding reserves of 1919. After allotting \$2,754,522 to those entitled to share in dividends in 1920, the surplus amounted to \$6,394,089, including dividends to policyholders payable during 1921. In view of the heavy payments to policyholders, in settlement of deferred and quinquennial dividends falling due in the past year, this surplus is considered eminently satisfactory. In addition, the contingent reserve of \$500,000 has been maintained. The net surplus earned in 1920 was \$2,162,689, which exceeds the net surplus earned in any previous year.

## IMPERIAL LIFE ASSURANCE COMPANY

The annual meeting of the Imperial Life Assurance Co. was held on Tuesday, and the report for 1920 showed the following progress:—

	1919.	1920.
Premium and interest income . . . . .	\$ 4,171,609	\$ 4,973,801
Reserves for policyholders . . . . .	13,892,960	16,018,228
Payments to policyholders . . . . .	1,531,318	1,349,866
Total assets . . . . .	16,983,112	19,310,403
Assurances in force . . . . .	92,634,158	116,201,347

The receipts totalled \$21,146,444, being made up of net ledger assets from 1919, \$16,112,942; premiums, \$3,983,735, compared with \$3,266,124 in 1919, interest, etc., on investment, \$994,303, compared with \$940,232 in 1919, and \$55,462 consideration for supplementary contracts. The disbursements included policy claims, profits, annuities, etc., \$1,349,866 compared with \$1,531,318 in 1919; commissions, salaries and expenses, \$1,140,701, compared with \$919,832 in 1919; supplementary contract payments, \$51,820; taxes, licenses, subscriptions, etc., \$50,032; rent and furniture, \$54,314; general and loaning expenses, \$196,793; and dividends to shareholders, \$67,500.

The balance sheet shows total assets to be \$19,310,403. Mortgages have increased from \$4,866,958 to \$5,133,640, bonds from \$8,600,468 to \$9,951,818, and loans on and purchased policies from \$2,012,436 to \$2,366,732. The reserve for assurances and annuities have increased from \$13,760,757 to \$15,900,925, and the policyholders' net divisible surplus from \$1,962,084 to \$2,115,857.

### FOREWARNINGS FOR 1921

ANNUAL reports now being presented by some of the largest financial institutions in this country show little that is new so far as profits are concerned, but a comparison of balance sheets with those of a year ago brings out the new tendencies which have developed during the course of the year. The profits are in nearly every case greater than in 1919, but the difference is usually small, and is offset by higher taxes and by requirements for depreciation and other contingencies which have now become probabilities.

One year ago bankers were everywhere calling attention to the epidemic of extravagance which was sweeping over the country, bringing expansion of credit and increases in imports. Such a condition, it was pointed out, could not long continue after the end of the war, and had their advice been more closely heeded, fewer businesses would have been caught in the downward sweep of prices last fall.

While the most critical period seems to have been passed, there is still need for caution, and Sir Edmund Walker at the annual meeting of the Canadian Bank of Commerce on Tuesday reiterated his warning of last year. He did not refer, however, to what has been one of the remarkable illustrations of extravagance, viz., the relatively small increase in bank deposits compared to the growth of loans. While savings deposits have increased to some extent during the past year, demand deposits show a reduction, which is rather conclusive evidence of the tightness of credits as compared with what business would like to use.

From the insurance field come also evidence that commitments made in the fervor of the past few years may prove burdensome in some cases. G. A. Morrow, president of the Imperial Life Assurance Company, pointed out at the company's annual meeting on Wednesday that policy loans had increased by \$354,000, which, while not an unfavorable showing, may be taken, in conjunction with general manager Weston's emphasis on the need for preventing lapses, as an indication that the companies have some fears that some of the business written at inflated levels and in prosperous times will not remain on their books.

### GOLD MOVEMENT FROM CANADA

THE importance of this country as a source of gold for the United States is indicated by figures just made public. The United States received \$34,200,000 in gold from Canada during the year just closed, while of the gold exports \$5,500,000 went to the Dominion, according to announcement made on January 12 by the Federal Reserve Board. This statement shows a net gain in the United States stock of gold of \$106,800,000 during 1920, as against a net loss for 1919 of \$291,700,000. Gold imports for 1920 totalled \$428,700,000, as compared with \$76,500,000 for 1919, while gold exports aggregated \$322,100,000, as against \$368,200,000 exported in 1919. Silver imports for the year totalled \$88,100,000, as against \$89,400,000 in 1919, while exports of silver for 1920 amounted to \$113,600,000, as compared with \$239,000,000 the preceding year.

Of the total gold imports for the year, \$274,900,000, or over 64 per cent., came from Great Britain, which the board said included \$108,500,000 of gold formerly held by the Bank of England for the account of the Federal Reserve Banks and returned late in the year to the United States. Other large shipments in addition to the \$34,200,000 from Canada, were \$48,700,000 from France, and \$30,200,000 from Hong Kong. Nearly 60 per cent. of the total gold exports for the year, the board said, were consigned to Asiatic countries, and over 30 per cent. of the total, or \$101,300,000 to Japan alone.

### FIRE INSURANCE COSTS AND COMMISSIONS

THE Ontario government proposes to introduce at the coming session of the legislature a bill to limit fire insurance agents' commissions to a flat rate of 15 per cent. Judge Masten, in reporting upon fire insurance business in Ontario, in 1919, found that commissions were excessive, and recommended that, unless the companies themselves found some way of reducing them, legislation should be enacted to

do this. The superintendent of insurance for the province accordingly called a meeting on December 16 for an exchange of views with the companies. The government's plans had already been made public in the press, and although several alternatives were presented by the company representatives, no change in its intentions was indicated. The Ontario Fire Insurance Agents' Association, of which J. S. Dowling, of Brantford, is president, is taking active steps to fight the measure, and has engaged counsel to oppose it before the committee of the legislature. Some of the companies are also opposing it, but there are a few, which already have the branch office system, which are not averse to the new measure, though they do not favor the principle of government control.

It is undesirable that such a measure as is proposed should be placed upon the statute books of Ontario. Government control of commodity prices and of security prices failed, and was found to be particularly objectionable when an effort was made to fix the "spread" between producer and consumer, or to limit the retailer's profit, which corresponds to the fire insurance agent's commission. It is therefore unfortunate that the latter should be singled out for a renewed attack of government control at a time when the tendency is to release public regulation.

When the Masten report was presented, however, insurance men acclaimed it as a vindication of existing methods of doing business, which it was, in fact, with the exception of the part relating to commissions. They have quoted it with approval from time to time during the past two years, but have taken no action to forestall the legislation which the government could scarcely avoid introducing. The responsibility for conducting the fire insurance business on a sound and economical basis rests first of all upon the companies, not upon the government, and it strikes the outsider unfavorably when he sees that more is paid out in acquiring business than in meeting claims, as is quite commonly found in the case of individual companies. While, therefore, such a regulation as that proposed should be regarded only as a last resort, the only alternative available to the companies is to find some means of reducing the excessive commissions now paid in the larger cities, and reducing the cost of acquiring business as a whole.

#### TOO MUCH CANCELLATION OF BUSINESS

SLACKNESS of business is being enhanced by the cancellation of orders, which throws back upon the manufacturer or wholesaler goods which he thought were clear of his warehouses. The *Maritime Merchant* relates the following experience of a commercial traveller in this connection: "Last Sunday I spent in the village of — and went to church in the evening. The clergyman preached on the sanctity of contracts, incidentally alluding to Germany and the Belgian 'scrap of paper.' I thought it was a very good sermon. On the way out I got a signal from a man in the opposite aisle, one of my customers, that he wanted to speak to me. And what do you think he wanted to say? He wanted to tell me that he wouldn't require the two puncheons of molasses which I had sold him in November for the first of January shipment. The question is—Was he asleep during the sermon?"

There are undoubtedly cases where the only way out is to cancel, but the tendency of our commerce and trade should be set against this practice rather than in favor of its continuance. A contract is a business obligation, and if the firm to whom it is given lives up to its terms, it is the legal and moral duty of the purchaser to live up to his part and accept the shipment. The reason why these business obligations are not discharged is, in the majority of cases, because it will not pay to do so. It pays better to disregard business obligations, therefore disregard them and let the other firm worry about what is to be done about it.

Canada needs more common, every-day honesty in dealing with such matters as disregarded business obligations.

It is a vicious practice, and, once started, strikes farther than any one would dare do in any other way. Going through a season such as we are now, with contracts being cancelled simply because it does not pay consignees to honor their orders, creates a feeling of business instability that is hard to overcome and difficult to counteract. It is generally understood that where a firm fails to make shipment on time, or where the goods are not up to samples, or faulty in any way, there are grounds for refusal and rejection. It is right and proper that such should be the case. This is a perfectly legitimate practice, and a defence for good business methods. But this is far removed from the cancellation craze that has taken business by the throat in this country. Let us have in Canada a business community that will recognize contracts, and regard them as business obligations which they are morally bound to discharge.

#### TANNING INDUSTRY IN 1920

SOME of the difficulties which have faced the tanning industry during the past year were brought to public attention at the annual meeting of the tanners' section of the Toronto Board of Trade recently by J. Sinclair, chairman, when he pointed out that never before have the tanners been faced with such high costs on the one hand and such fluctuations in prices on the other. During the year they have had to meet steadily declining prices for hides and leather, until it was claimed, competent authorities consider, that the price levels are lower than circumstances would justify. On the other hand, manufacturing costs, labor, fuel and freight rates have increased, while labor efficiency is charged with such a decrease that "production costs are about 50 per cent. higher than what would appear justified from the actual increase in wages." The tanners had to face the further fact that in the spring these were heavy cancellations of orders due largely to the retail shoe trade cancelling their orders and returning shipments to the manufacturers, who in turn cancelled unfulfilled orders with the tanners. "This," Mr. Sinclair went on to point out in his report, "spread like an epidemic to other branches of the leather trade; consumers stopped buying; while the adverse exchange situation has prevented our seeking foreign markets, and curtailment has since been the order of the day."

On top of their ordinary troubles the tanners have had to meet the dumping of goods from the United States. The tanners across the line encountered the same situation as the local tanners, and when financial pressure was brought to bear upon them they tried to unload their supplies by dumping them in Canada "at prices ruinous to themselves even on replacement values." This dumping, Mr. Sinclair was convinced, should be discouraged, as it tends to demoralize the Canadian market and prolong the period of reconstruction. But in spite of such conditions Mr. Sinclair was optimistic that conditions would right themselves in the industry, and that the buying public would shortly gain greater confidence.

H. J. Sims' book, "Life Insurance Contracts in Canada," is one that should be on the desk of every agency manager. Insurance litigation is too common, and is too often due to misunderstanding between agent and assured.

Canada's foreign trade is growing, and our goods are being carried abroad more and more in Canadian ships. This means that marine insurance offers increasing possibilities for Canadian companies.

#### STRICTLY COMMERCIAL

"We have a mummy in this museum," said the guide, "that has had some wheat in his hand since the days of the Pharaohs."

"Well," rejoined Mr. Dustin Stax, "I'd advise him not to hold on any longer. Wheat'll never be any higher."

# TO INVESTORS

We have recently opened a Bond Department at Toronto, through which we shall be glad to arrange the purchase or sale of Victory or any other bonds for our customers.

## THE CANADIAN BANK OF COMMERCE

## PERSONAL NOTES

HON. WALTER C. NICHOL, founder and owner of the Vancouver "Province," has been appointed lieutenant-governor of British Columbia.

JOHN D. IRWIN, who has been associated with the stock and investment house of Morrow and Jellett, Toronto, for some years, has been admitted to partnership.

ERNEST C. DEAN, who for several years has been associated with the Montreal stock brokerage house of C. Meredith and Company, has been admitted to partnership in the company.

G. B. GREENE has been elected president of the Ottawa board of trade for 1921 by acclamation. Cecil Bethune, former secretary of the board, has been elected first vice-president by acclamation.

H. C. WILSON, formerly of the investment house of Burdick Brothers, and Brett, Limited, Vancouver, has been appointed manager of the bond department of the British-American Bond Corporation at Vancouver.

ROBERT E. PATTERSON, at present assistant manager of the Employers' Liability Assurance Corporation at Toronto, has been appointed general manager of the Globe Indemnity Company, Montreal. Mr. Patterson is thirty-eight years old

and has spent twenty years with the Employers' liability where he has gained valuable experience in all branches of casualty insurance. This is considered an excellent appointment and is a matter for congratulation all round. In his new position Mr. Patterson will succeed John Emo, who resigns as from March 31. Mr. Emo organized the Canadian Railway Accident Insurance Company in 1894, which company passed to the control of the Liverpool and London

and Globe Insurance Company, Limited, in 1910. Subsequently the name was changed to the Globe Indemnity Company of Canada. Mr. Emo has therefore been general manager for twenty-five years. For some little time past he has not been in the best of health and has come to the conclusion that it will be better for him to engage in agency business which will enable him to enjoy more outdoor life. Consequently he will, on retirement, enter the agency field as a representative of his old company. Needless to say, the directors have recognized Mr. Emo's long service by making him a suitable retiring allowance.

C. T. GRANTHAM has resigned as manager of the Empire Cotton Mills, Limited, of Welland, Ont., and has handed the management over to J. D. Payne and J. G. Johnston. Under the new management Mr. Payne will act as secretary-treasurer of the concern and Mr. Johnston as mill superintendent.

GEORGE W. LEE has been appointed chairman of the board of commissioners of the Temiskaming and Northern Ontario Railway. Mr. Lee began in the freight office of the Canadian Pacific Railway, and left to become travelling

freight agent of the T. and N. O., from which he rose to general freight agent, and then to commissioner in 1914. Mr. Lee was born in Renfrew County and worked as a lumberman for fifteen years. His home has been in North Bay for many years and he has been elected repeatedly to the mayoralty and council of that town. A profit of \$300,000 was shown in the financial statement of the T. and N. O., for the year ended October 31, during the whole of which time Mr. Lee was in charge.

JOSEPH P. CANNON, of the Toronto Stock brokerage firm of J. P. Cannon and Company, was elected president of the Standard Stock and Mining Exchange at its annual meeting held on January 11. The other officers elected are: 1st vice-president Hamilton B. Wills, 2nd vice-president F. Asa Hall, secretary-treasurer P. G. Kiely, and Directors F. J. Crawford, J. T. Eastwood, D. G. Lorsch, F. M. Lorsch and L. J. West. A satisfactory year was reported. The Standard Stock Exchange lists mining issues, and is the most active market in Canada for some of the leading mining stocks. It is located at 56 King St. West, in the centre of the city's financial district.

## OBITUARIES

SIR WILLIAM PETERSON, formerly principal of McGill University, Montreal, died in London, England, last week.

JAMES H. KITTERMASTER, manager of the Lambton Loan and Investment Company, Sarnia, Ont., died in the city last week.

H. A. HARVEY, who was connected with the Bank of British North America for many years, died in Montreal last week, following a short illness.

JAMES BRYCE, formerly vice-president and general manager of the Canadian Express Company in Montreal, died in that city last week.

FRANK P. CURRIE, president of the Dominion Paper Company, Limited, and of the W. and F. P. Currie Company, Limited, died in Montreal last week. Mr. Currie came to Canada from Lanarkshire, Scotland, in 1862.

SIR FRANK BAILLIE, one of Toronto's best known citizens and well-known throughout the Dominion, died in the Wellesley Hospital, Toronto, last week. The late Sir Frank Baillie, K.C.B.E., was president of the Canadian Aeroplanes, Limited, Toronto; president of the Canadian Cartridge Company, Limited, Hamilton, and president of the Burlington Steel Company, Limited, Hamilton.

JAMES CLANCY, formerly provincial auditor for Ontario, died at his home in Toronto on January 8. Mr. Clancy had been in the service of the Ontario government for a long time, having held the position of provincial auditor for fifteen years prior to his superannuation a few weeks ago.

WILLIAM FITZGERALD, former superintendent of insurance for the Dominion government in the finance department, died at Ottawa last week in his 78th year. He was a native of London, Ont., and went to Ottawa as assistant deputy minister and superintendent of insurance on December 1, 1885. Previously he had practised law in Toronto.

## BANK OF TORONTO ANNUAL MEETING

Some of the difficulties of carrying on banking at the present time were pointed out at the annual meeting of the Bank of Toronto on January 12, but, on the whole, Canada's position was considered to be a relatively fortunate one. Authority was received to enlarge the board of directors from twelve to fourteen, and one of the newly-created vacancies was filled by the election of James D. Chaplin, M.P., St. Catharines.

In the course of a review of the financial situation, President W. G. Gooderham referred to the recent severe strain on the credit situation, and said it had been the policy and desire of the banks in Canada that readjustment of prices should take place gradually. "Pressure in the United States," he said, "took a more vigorous form, and resulted in forced sales being made on a large scale, and a severe drop in prices of many commodities. This action on their part was necessarily to some extent reflected in Canada, but it is to the credit of our banks that what might have proved a very serious situation has been handled so prudently." Canadian trade had turned latterly toward a great increase in imports, and the situation was complicated by the depreciation in the currency of the larger European countries, which made it impossible for them to pay for imports that were absolutely essential to them, if they are to regain means of living. "Such large sections of the world are in a state of economic chaos that the usual exchange of commodities cannot be made, and under these conditions we cannot hope to extend our trade with them upon a cash basis."

Discussing the general situation, General Manager Thomas F. How said that in some instances the downward movement in prices had been rapid and had probably gone too far for the present. "In general, however," he said, "we are working to a more reasonable and healthy condition of business, which is greatly to be desired, and in the best interests not only of the banks, but of all classes of the community. It is unfortunate that the readjustment should involve more or less loss and hardship. This, however, is inevitable. The necessities of the war forced a departure from sound principles of business and finance. Many government regulations and restrictions, interfering with the laws of supply and demand and free competition, were considered necessary. We are now working our way back slowly, in some cases painfully, to a natural and normal condition. We have been doing what we could directly with our customers, as well as indirectly, to influence a policy of caution and preparedness, and although our advice has not always been taken—a banker is often regarded as too conservative for any business but banking—we are glad to be able to report to you that your property has been conserved and strengthened, and is in excellent condition, and that our customers, with remarkably few exceptions, are coming through a rather trying time in comparative comfort, and are in good position to avail themselves of an improvement in trade, which, we hope, is not far distant."

## COMMERCIAL TRAVELLERS' ASSOCIATION

The annual meeting of the Commercial Travellers' Association, held in Toronto, December 29, was addressed by E. E. Starr, auditor of the Ontario Workmen's Compensation Board, who pointed out that commercial travellers, but not jobbers' travellers, were included within the scope of the act.

The forty-eighth annual report of the Board of Management showed a net surplus for the year of \$120,106, and the total assets had now reached \$1,636,943.

Walter Moore, the late first vice-president of the association, was elected by acclamation to the office of president for the ensuing year. Harry Dodgson was selected as first, and Joe Zammers as second vice-president, E. Fielding treasurer, and James Sargent, secretary. The following members of the board were also elected: John Everatt, John Cormack, C. A. E. Colwell, Geo. L. Wilmott, J. G. Cane, R. G. Hector, Benj. Miller, J. Davis and W. H. Judge.

## CALCULATING EXCHANGE RATES

A "Half Minute" table for calculating the fractional premium or discount on exchange has been published by A. B. Barker, 2 Wellington St. East, Toronto. It advances by 16ths, with additional tables for 1/64th and 1/32nd. The method of calculation is illustrated on page 33.

## MERCHANTS FIRE MAKES RAPID GROWTH

The results shown by the Merchants Fire Insurance Co., in its annual report just made public, for the year ended December 31, 1920, indicate exceptionally rapid growth. Gross premiums were \$570,634, compared with \$414,829 in 1919, while interest from investments has increased from \$22,779 to \$28,154. The total cash receipts were \$698,081, an increase of over \$200,000, accounted for in part by the rise in premium income and also by the fact that "cash received for investments" was \$38,000 higher than last year.

The expenses of management were \$226,656, or 37.4 per cent. of gross premiums, while the expenses last year were \$166,422, a ratio of 33.6 per cent. The largest increase is in the item of agency commissions, which have risen from \$96,322 to \$136,030, or by 40 per cent. Salaries and fees are up by \$7,000, and printing, stationery and advertising by \$5,000. The amount paid for claims was \$198,978, or 32.8 per cent. of gross premiums, compared with \$144,506, or about 30 per cent. last year.

The balance sheet shows total assets of \$948,725, including \$150,000 of uncalled capital stock. The company's bond investments, consisting almost entirely of government and municipal bonds of the best character, total \$473,089, an increase of \$112,000, compared with 1919. The new investments are reflected in the revenue statement by \$215,586 of "cash invested during 1920." The other chief assets are first mortgages \$191,375 (last year \$164,500) and head office building \$75,000 (last year \$50,000). After allowing for the legal reinsurance reserve, which has risen to \$416,023, compared with \$309,736 at the end of 1919, and the paid-up capital of \$150,000, there is a net surplus of \$221,702, or nearly \$90,000 greater.

## LIFE INSURANCE TAXES IN QUEBEC

To request a reduction in the taxes at present imposed upon life insurance agents in the province of Quebec, a deputation of some fifty life insurance officers and agents conferred with Premier L. A. Taschereau and Hon. W. G. Mitchell, provincial treasurer, on December 14. The case was presented by T. J. Parkes, C.L.U., of Sherbrooke, president of the Life Underwriters' Association of the province of Quebec, and J. B. McKechnie, president of the Life Officers' Association, which is a nation-wide institution.

It was pointed out that all insurance agents are licensed by the provincial government to practise in the province, for which they pay \$5. The various municipalities also tax the companies from \$10 to \$200 and each individual agent from \$5 to \$100. In addition to a Dominion tax and to the taxes imposed upon the companies by the municipalities, the province charges the companies 1 1/2 per cent. on the gross premium income. This, it was contended, was a triplication of taxation, and amounted to about 2 per cent. of the gross premium income, and by that much reduced the profits of the policyholders, or increased the cost of their insurance. If all the taxes were removed the profits would be increased by about 25 per cent, it was said.

The Premier and Mr. Mitchell promised to go fully into the question with as little delay as possible. Among those forming the deputation were: A. B. Wood, Brig.-Gen. E. W. Wilson, A. J. Meiklejohn and D. L. Young, J. P. Bourgeois, J. A. Goulet, F. A. Buck, J. A. Saucier, A. Lafontaine, J. G. Gautier, T. E. Bourke, C. C. Gauvin and G. H. Vaillancourt.

## BANK BRANCH NOTES

Thirteen New Branches Announced in Past Two Weeks—  
Twenty-Seven Opened and Fourteen Closed in December

The following is a list of branches of Canadian banks which have been opened recently:—

Toronto (Cherry & Commissioner Streets) .....	Dominion Bank of Canada
Jovellanos, Cuba .....	Royal Bank of Canada
Hamilton (Gage & Main Sts.) .....	Royal Bank of Canada
Port Credit, Ont. ....	Royal Bank of Canada
Glen Robertson, Ont. ....	Bank of Nova Scotia
Bedford, N.S. ....	Bank of Nova Scotia
Winnipeg, Man. (Selkirk & McGregor) .....	Canadian Bank of Commerce
Lake Megantic, Que. ....	Provincial Bank
Montmagny, Que. ....	Provincial Bank
Riviere Bleue, Que. ....	Provincial Bank
Oak Ridges (Layton & Danforth Ave.) .....	Royal Bank of Canada
Vancouver, B.C. (Robson St.) ..	Canadian Bank of Commerce
St. John, N.B. (King St.) ....	Standard Bank of Canada

Maurice V. Reath, teller of the West End Imperial Bank, St. Thomas, has been transferred to the Windsor branch, as assistant accountant.

E. A. Moore, the manager of the Bank of Montreal at Prince Albert, Sask., has been transferred to Thorold, Ont. He is succeeded in Prince Albert by C. P. Colville, of Winnipeg.

The Bank of Hamilton has opened new quarters at the corner of St. Peter and St. James Sts., Montreal, formerly occupied by the Bank of Nova Scotia.

The Canadian Bank of Commerce is now installed in its new building at Retlaw, Alta.

The Royal Bank of Canada has bought from J. O. Gareau, Ltd., the corner of the departmental store at the corner of St. Lawrence boulevard and Mount Royal Ave., Montreal, for the purpose of establishing a branch of the bank there.

## Twenty-Seven in December

During the month of December there were 27 branches of Canadian banks opened. The following have not already been mentioned in *The Monetary Times*: Field, Ont., Hochelega; Grenville, Que., Provinciale; Leslieville, Alta., Imperial; Mayerthorpe, Alta., Merchants; Martinville, Que., Nationale; Phillipsburg, Que., Nationale; St. Adrien de Ham, Que., Nationale; St. Armand Sta., Que., National; St. Benoit, Que., Hochelega; St. John, N.B., Standard; St. Luce, Que., Hochelega; St. Onexime, Que., Nationale; St. Zenon, Que., Hochelega; Thetford Mines West, Que., Nationale; Tompkins, Sask., Imperial; Waterville, Que., Nationale; Winterton, Nfld., Royal.

The following 14 branches were closed: Blackville, N.B., Royal; Burritts Rapids, Ont., Royal; Burritts Rapids, Ont., Union; Glen Ewen, Sask., Royal; Honeywood, Ont., Home; Honeywood, Ont., Royal; Kirriemuir, Alta., Merchants; Leipzig, Sask., Royal; Little Paddle, Alta., Merchants; Mansfield, Ont., Union; Montreal, Que., 224 St. James St., Nova Scotia; Petersfield, Man., Dominion; Sunnynook, Alta., Toronto; Swanson, Sask., Royal.

The branches opened were distributed among the banks as follows: Nationale, 7; Royal, 6; Hochelega, 4; Montreal, 2; Imperial, 2; Nova Scotia, 1; Commerce, 1; Provinciale, 1; Merchants, 1; Hamilton, 1; Standard, 1.

Johnston and Ward, members of the Montreal Stock Exchange, have purchased from Duncanson, How and Company a seat on the Toronto Stock Exchange. Duncanson, How and Company formerly held two seats. Stanley Johnston, of Johnston and Ward, has applied for membership in the Toronto exchange.

## WEEKLY BANK CLEARINGS

# Financial Relations With United States

Solid Basis for Future Growth—United States Investments in Canada Have Increased Rapidly—Slackening in Industry Means Turning to Development of Natural Resources With Which Canada is Well Supplied—Movement of Population in This Direction

By RALEIGH S. RIFE  
Guaranty Company of New York

ON account of the demand for munitions of varied character, the industrial capacity of the United States was greatly increased during the recent war. Thus, as a country, a great step forward was taken in our tendency to become more and more an industrial nation. A country predominantly industrial finds itself confronted with the necessity of building up a trade with other countries. It must import foodstuffs to maintain its population, raw materials for manufacturing industry, and export manufactured products in payment for these imported materials. It often becomes necessary for such a country, to become the pioneer in developing new markets, which aid in supplying additional sources of raw materials and foodstuffs and markets for its manufactured products. This latter process is often accomplished by investment of capital by the industrial nation in these new countries. This was unquestionably the controlling factor in the British policy in the early 70's in the development of the Argentine. As the United States goes further with its development as an industrial nation our trade and financial arrangements with Canada, our second greatest customer, must increase. Canada has the raw materials that will be needed by industrial plants in the United States, and the United States will have capital available for developing these resources.

## How Trade Balance is Offset

At present there is a very strong financial relationship between the two countries. For the fiscal year ended March, 1920, Canada bought from the United States \$801,000,000 of merchandise and sold to the United States \$501,000,000, showing a balance in favor of the United States of \$300,000,000. The strict mercantilistic thinker might raise a hand of warning about this trade condition. But at present Canada need not be disturbed about such trade relationship. This balance is covered by two factors which are undoubtedly of material advantage to Canada. There is a three-cornered trade relationship between Great Britain, Canada and the United States. Canada sells Great Britain larger amounts of commodities than she in turn buys from Great Britain. Thus Canada is able to pay for the unfavorable balance against her in trade with the United States by credits arranged from the sales which Canada has made in Great Britain.

Further, American capital has been gradually invested in Canada in increasing amounts through American farmers settling in western Canada, through the establishment of branch plants and factories in Canada, and through other private and industrial developments and the flotation of Dominion and municipal bonds in the United States. The investment of capital in any considerable amounts in a country for its development results in the inflow of goods and capital instruments. The year 1919 was a particularly active period for the investment of American capital. It has been estimated that over 200 American firms established branch houses in Canada and that there was also extensive improvement of existing branch houses and factories in the country. Official figures estimate that for industrial purposes alone over \$55,000,000 of American capital was invested in Canada in 1919, while American farmers migrating to Canada carried with them over \$18,000,000. In addition to this a total of \$80,000,000 of Dominion and municipal bonds were offered in the United States during 1919.\* The total investment of American capital in Canada is probably in excess of \$1,800,000,000.

\* For the first eleven months of 1920 the total amount of Canadian securities of all classes offered in the American market, less refunding, amounted to more than \$134,000,000.

This relationship which has already become so strongly fixed between the two countries should tend to grow with greater strength as the undeveloped resources of Canada are brought into use.

## Change in Economic Conditions

In answering the question, "What are the forces that should tend to make Canada a more attractive place for the investment of American capital in the future?" it is necessary to bear in mind the whole world economic situation of to-day. Particularly is it valuable to make a brief survey of the world economic conditions in this period of readjustment and of business depression. Our confidence in the future prosperity of these two countries must be based upon a proper appraisal of the fundamental factors underlying these world conditions. The war resulted in a greatly increased manufacturing capacity along many lines. Many new factories were built to make munitions. It is probably true that the world's steel-making capacity is at least 50 per cent. larger than at the outbreak of the war in 1914.

The period of speculation and feverish buying on the part of the people in the post-armistice period has resulted in additional features. During the war industrial concerns which had made enlargements to their factories in order to produce war munitions built up heavy reserves as an offset to the capital extensions made necessary by war contracts. Instead of using these reserves to write off the additional plants and thereby go back to a former pre-war producing basis, most of these plants endeavored to enlarge their lines of production by increasing the variety of products and also the quantity of production. This has tended in the average to increase our manufacturing plants along many lines. During the speculative period additional factories and plants were built so that the industrial people might be able to supply what appeared to be a great buying boom on the part of the public. So, generally speaking, we see the world to-day confronted with a long manufacturing capacity, the manufacturers confronted with falling prices of materials and products and a slowing up of the buying power of the public.

## Movement to Land is Possible

This phenomenon of slowing up of business appears to be world-wide. If the slowing up of business continues to be general and world-wide in character it will seem that, in the specialized industrial nations, economic forces will be set in operation tending towards an exodus of people from industrial nations to those countries which have extensive areas of land for settlement and untouched natural resources awaiting development. The countries that have already developed a transportation system to give access to these new regions will benefit to the greatest degree. This settlement of people upon new lands will result in increased production of foodstuffs, of raw materials, and thus tend to bring the world economic factors of production into a more normal proportion. It is axiomatic that it takes great economic pressure to overcome the inertia of man to remain in the status quo. The combination of the spirit of restlessness engendered by the world war and the present recession of business which in its world-wide character is affecting many industrial centres will probably be sufficient to overcome this economic inertia of man. While the human cost of restlessness and of economic depression may bear heavily upon particular groups of peoples, it must be taken for granted that it is one of the prices that are paid for social and economic progress. This may be just a sign of

## Is Your Property Still Unsold—Still To Let

We will sell or rent it for you. We can do it for you, because we are doing it every day for others. Collection of Rents, Efficient Management of Apartment Houses, Stores, Offices and Factory Buildings—we do these things exceptionally well.

For the service we render our fees are small. By comparison with previous results, our services very often cost the owner nothing. Call, write or phone for particulars. We will tell you exactly what we do, how we do it and what we charge.

the approaching era of expansion which will tend to follow the period of depression and economic adjustment. The safety of our present situation must rest in the industrial nations giving attention to those countries which have undeveloped areas and untouched resources, lending these new countries the capital and assistance to develop their resources.

#### Railways May Be Needed

Canada is fortunately prepared in this respect. It was generally believed that the development of her great transcontinental railroads was ahead of her needs and, therefore, an economic waste. But the contrary may readily be the result as she is now in a position to take the greatest advantage of the world's present economic situation. The means of transportation are available by means of which the new settlers may get fairly ready access to these undeveloped areas.

Canada possesses the largest area of undeveloped land suitable for man in the North American continent. In the three prairie provinces of Manitoba, Saskatchewan and Alberta it is estimated that 178,000,000 acres are suitable for settlement, and in those provinces there are only 35,000,000 acres of improved land. The opportunity to acquire ownership of land and thereby improve their own economic status was the main impelling motive that brought millions of people from European countries to settle upon the great prairies of the middle and far west of the United States. This undoubtedly was the main reason for the great expansion of American business after the civil war. American farmers are already acquainted with the opportunities in Canada. In the year 1919 over 52,000 people from the United States settled in Canada, the majority of whom were of the farmer class. The pioneer spirit on the part of the American agricultural class is still strong and this should result in increased migration to the great Canadian northwest.

#### Forests a Great Asset

In addition to the extensive undeveloped agricultural area Canada has a forest area of over 225,000,000 acres which must become a source of great wealth. These resources will make necessarily a demand for capital from the United States to furnish lumber for building purposes and wood pulp for the paper industry. Canada to-day has a varied mineral production which in 1919 was estimated in value at over \$170,000,000. The extent to which Canada is a great storehouse of minerals which are awaiting development is probably unknown to-day. The extensive deposits of bituminous coal east of the Rocky Mountains in the province of Alberta will probably be the basis for future industrial development. At present the greatest interest seems manifested in the recent discovery of an extensive petroleum area in the Mackenzie River basin. If this basin becomes an important producer of petroleum we may expect a great influx of American capital for the development of this area. It is stated that one American oil company is expending over \$2,500,000 this year in testing this territory.

#### Huge Potential Water Power

American capital has been and must become increasingly interested in the opportunities for developing the water-power resources of Canada. It is estimated that there is available over 19,000,000 h.p., as compared with the present developed 2,418,000 h.p. We are coming face to face with the idea that new tests must be made to determine the industrial strength of a nation. In the past the existence of extensive deposits of coal and iron were considered the surest foundation for the industrial success of a country. Recent development and wide uses of petroleum products have added oil as a third factor. The early industrial life of the United States was built around sources of natural water power, but the development of electricity makes it possible to transform that natural energy of the water fall to industrial centers rather than the old practice of transporting the industry to the source of water power. Thus a fourth factor, namely, water power for hydro-electric development, is an additional basis for the industrial strength of the nation. We are just entering the electrical age and are only beginning to appreciate the possibilities of application of

electrical energy to industry. The growth of chemical science in relation to electricity will undoubtedly increase the manifold uses of electrical energy.

It is undoubtedly a fortuitous act of nature that in the central eastern part of Canada, in the St. Lawrence valley, there should be located the greatest source of water power in the eastern part of the North American continent. The St. Lawrence River, together with the great lakes, give to this great water power region cheap water transportation to the heart of the continent and the great industrial centers. The industrial engineer with vision sees these great untouched resources beckoning American capital to develop them so that the producer may be placed in the most advantageous position to take advantage of rich natural resources and available markets. The proposed St. Lawrence ship canal project would add further to the advantages of this region for the location of industry.

#### Tariff is a Barrier

For those people and those industrial leaders who are anxious to have their industries so located as to obtain the best advantage of the sources of raw materials and natural conditions for production must wish for better trade relations between the two countries and for reciprocity of tariff treatment, so that no artificial economic barrier shall be placed between these two great peoples, thereby tending to prevent the development of their economic activities along lines mutually advantageous to both countries.

#### Exchange Also a Factor

While Canada is a land of opportunity, making a call to capital to come and help develop these resources, there is an additional factor that should tend towards the investment of American capital in Canada. The present premium on dollars as measured in the exchange market between the two countries should encourage the investment of capital in Canada. The extensive investment of capital in connection with the development of the resources of the country should in time correct this disparity in exchange. With the correction in disparity of exchange additional profits should result to the investor.

As these two countries face the present era of adjustment of prices and business and the slowing up of demand, their industrial and financial leaders must realize that they are standing upon the threshold of a period of great opportunity. Great economic changes are being made in the fabric of our economic life. If proper attention is turned to the development of new countries, of new areas, through the investment of capital for the development of their resources, we can face the future with confidence, realizing that beyond the period of business depression, of readjustment of values, there is the period of world-wide economic expansion. The plea must be made for better understanding between these two great countries. The great initial step has been taken in a Canadian representative being sent to Washington. This cannot help but establish better feeling between these two great countries. Economically they supplement each other's requirements to a great extent. Hence the need for increasing the trade and financial relations between the two countries.

#### JUDGMENT FAVORS POWER COMPANY

Judgment was given by Hon. Justice Audette, of the Exchequer Court on December 22 in the case of the King v. the Ontario and Minnesota Power Co. The government sued the company for damages to the extent of \$23,413 for the flooding of the Ojibway Indian reserve located at the foot of Rainy Lake. Flooding was due to the erection of a dam. The court finds that the company could not be held responsible for the damage done by the flooding of 1918, when extremely high water prevailed throughout the season, creating a condition which expert witnesses stated is not likely to occur again. No costs were allowed to either parties to the suit.

POST OFFICE SAVINGS BANKS

Withdrawals from the Post Office savings banks have been falling off considerably during the past few months, while deposits show a good improvement. In April, 1920, withdrawals totalled \$1,214,707, while deposits were only \$537,316. The September statement shows deposits at \$580,047, and withdrawals down to \$761,619. Details for September are:—

# Commercial Failures in Canada in 1920

Big Increase in Number of Companies Which Went Into Insolvency—  
Liabilities Also Grew to Large Figure—Record of Past Seventeen Years  
Shows Number of Failures Third Lowest, but Liabilities Third Highest

DULLNESS in trade and financial strain are reflected in the 1920 statement of business failures in Canada. The figures, which were prepared by R. G. Dun and Co., show that 1,078 companies went into insolvency last year, as compared with 755 in the previous year. Liabilities of these companies totalled \$26,494,301, or an average of \$25,041, while in 1919 liabilities were \$16,256,259, or an average of \$21,531. The number of failures last year was the third lowest since 1904, but the amount of liabilities was the third highest in that period.

The greatest number of failures, and of the largest companies, took place during the latter part of the year.

This is not reflected in the annual report, but a comparison with the half-yearly statement shows that this is so. For instance, at the end of June, 1920, the number of companies which had gone into liquidation for the six months was given as 415, with total liabilities of \$7,636,633. If the figures were more closely analyzed, they would no doubt show that conditions were more severe during the last three months than in the preceding quarters.

The tables given below show the failures by provinces for the whole of 1920, together with the amount of liabilities. A record is also given for the past seventeen years, showing failures by classes, and the total.

The Oshawa, Ont., Life Underwriters' Association on December 16 elected the following officers for 1921: President, C. C. Stenhouse, Excelsior Life; vice-president, L. Winnell, Metropolitan Life; secretary-treasurer, D. A. Morris, Prudential Insurance Co. Executive committee—F. B. B. Patten, Manufacturers; V. A. Henry, Sun Life, and E. Smith, Imperial Life.

## COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ending January 7, 1921:—

Dominion Reduction Co., 75,000; McKinley Darragh, 87,484; total, 162,484 pounds, or 81.2 tons.

# The Penalty

Where is John this morning?  
 Why John has left.  
 Oh—no—not fired—nothing like that—John has accepted a position with H. S. & Co. at more than *double* his old salary.  
 He was an *ambitious* chap—Was always looking ahead.  
 Of course, working side by side, you didn't realize the fact—  
 No doubt you placed John in the same class as yourself—  
 But he wasn't—  
 One day about a year ago he heard of the S. C. S.  
 He investigated—  
 Naturally enough he began to study—  
 And during the past year he has not wasted a single moment—  
 When the above opening came to the attention of the school they thought of John.

And so *you* go on in the same old position, with the same old limitations, and the *same old pay*.

How long will you *sentence yourself*?  
 When will you wake up to see that John's promotion was the inevitable outcome of his ambition and his determination to rise?  
 We know it was a jolt to you—  
 John knew it would be—but he was wise to say nothing—He knew that example is better than argument.

*Knowledge* is the  *motive power* behind all real achievement—  
 Don't stare at the empty desk—Follow the

man who left it—*Get busy*—it's not too late—  
 John is not the only one who has climbed up—  
 During the past 18 years we have trained hundreds, many of whom are to-day occupying positions of might and influence in the business and professional world—  
 We have graduates earning all the way from \$4,000 to \$10,000 a year.  
 Below is the same coupon that John marked a year ago—Are you going to mark it—or are you going to go on *paying the penalty of the untrained?*

# The Bankruptcy Act in Operation

274 Failures Up to End of November — Rapid Increase in Last Two Months—Over Fifty Companies Included—Creditors Not Yet Thoroughly Familiar With the Act—Heavy Costs May Be Piled Up Under it

By ANGUS LYELL

IT is six months since the Bankruptcy Act became law. The measure as yet is comparatively new and its full effect on business has not been felt. For the first five months, to the end of November last, notices of 274 failures under the act appeared in the "Canada Gazette." During this period business on the whole was good. With the stagnation, more or less, which is now setting in, it is reasonable to expect that during the next two or three months there will be a relatively large number of failures. The measure has certain advantages over the insolvency laws which were enacted by the provinces to help meet a want occasioned by the absence of bankruptcy legislation, and as its scope generally becomes clear r course will undoubtedly be had to it by honest traders whose assets do not equal their liabilities.

## Monthly Failures Are Increasing

To the end of November last the failures reported under the act by provinces were as follows:—

	July	Aug.	Sept.	Oct.	Nov.
British Columbia	2	2	5	7	4
Alberta	2	3	3	8	8
Saskatchewan	—	4	—	7	4
Manitoba	3	—	2	1	2
Ontario	10	16	19	23	31
Quebec	—	22	11	33	29
Nova Scotia	—	2	2	4	3
New Brunswick	1	—	1	—	—
Totals	18	49	43	83	81

The only comment that need here be made is the sharp increase in the number of failures during the month of October, which was maintained in November, and which will likely show a further increase in December, the figures for the first half of the month being 58. From Ontario and Quebec come the greater number of the cases.

## Mainly for Individuals

Bankruptcy proceedings usually apply only to the estates of individuals. Under our act, however, companies may be wound up, except banks, insurance, trust, loan and railway companies, and building societies having a capital stock. This applies, of course, only to companies which are insolvent. The following analysis of the failures already quoted shows that the measure is being taken advantage of in the winding up of companies, although the court still has the jurisdiction to direct that a company may be wound up as heretofore under the provisions of the Winding Up Act:—

	Companies	Firms	Sole traders	Total
British Columbia	10	3	7	20
Alberta	1	5	18	24
Saskatchewan	2	—	13	15
Manitoba	2	2	4	8
Ontario	21	20	58	99
Quebec	14	17	64	95
Nova Scotia	1	3	7	11
New Brunswick	—	—	2	2
Totals	51	50	173	274

## Majority Are Voluntary Assignments

In the period under review only 21 receiving orders were made. In other words, nearly all of the cases were voluntary assignments. Most of the receiving orders—15—were made

in the province of Quebec. Four companies, six partnerships and five sole traders were so adjudged bankrupt. Two receiving orders were made in British Columbia, one in Alberta, and three in Ontario. In the first two weeks of December five receiving orders were granted in Quebec. It is probable that the number may increase later. As creditors become more familiar with the provisions of the act they may exercise their rights under it more fully.

The objects of enacting bankruptcy legislation were to obtain uniformity of law and practice in all of the provinces, to relieve honest debtors of liabilities beyond their means and thus give them an opportunity to make a fresh start, and to introduce a cheap and expeditious method of closing out insolvent estates.

So far as uniformity of procedure is concerned the Bankruptcy Act has accomplished this. The same law now prevails all over the Dominion. Uniform rules of practice have also been drafted and put into effect. And honest debtors who surrender all of their assets for the benefit of their creditors may be assured of tolerant and fair treatment from the several judges who have been appointed to administer the measure. But will the procedure under the act be cheaper and more expeditious than that which existed under the assignments acts of the several provinces?

## Legal Costs May Be Heavy

I doubt whether it will be. As a matter of fact I am inclined to the opinion that the closing out of the estates of partnerships and sole traders will now be more costly. In the case of such estates it may now be relatively easy to create more legal procedure. The tariff of charges is not formidable at first glance, but on analysis it will be found that a nice little bill may be prepared and established. When the measure was passed it was enacted that the maximum amount of legal expenses would be governed by the gross proceeds of the assets of an estate. Thus, for an estate that realized less than \$5,000 the solicitor's bill could not exceed 10 per cent. of the gross realization. In the case of estates realizing more than \$5,000 the maximum was 5 per cent. This provision, however, was changed at the last session of parliament. The charges are now governed by a tariff.

It is in the case of defunct companies, however, the affairs of which have often been complicated, that heavy costs have usually been incurred in the past. Win or lose, litigation is always costly. Under the Bankruptcy Act it will be possible to eliminate considerable legal expense in the winding up of companies. The trustee has much greater powers than a liquidator appointed under the Winding Up Act, and he may, with the approval of the creditors or the inspectors appointed by them, settle by compromise in a rough-and-ready but good business way many matters in connection with which it has been usual in time past for legal minds to deliberate.

## Some Changes Might be Made

The rules which have been drafted under the act are not free from criticism from a practical point of view. There is a good deal, too, in the act which is cumbersome. But possibly after the measure has been in operation for a year or two there will be radical amendments. In the meantime the act deserves favorable consideration. It will tend not only to the keeping of better records but to the promotion of a spirit of greater honesty in business. When a man finds that he is losing ground, that his assets are not equal to his liabilities, the tendency will be for him to surrender his estate to his creditors if sound reorganization cannot be effected.

# The Canadian Bank of Commerce

At the Fifty-fourth Annual Meeting of the Shareholders, Held in Toronto 11th January, the Largest Earnings in the History of the Bank Were Reported as the Result of the Bank's Business for the Second Year in Canada's Reconstruction Period

The President, Sir Edmund Walker, took the chair and, after the usual organization proceedings, the following Profit and Loss statement for the year ending 30th November last was submitted:—

Balance at credit of Profit and Loss Account, brought forward from last year-----	\$1,427,735.40
Net profits for the year ending 30th November, after providing for all bad and doubtful debts -----	3,306,243.97

\$4,733,979.37

This has been appropriated as follows:—

Dividends Nos. 132, 133, 134 and 135, at twelve per cent. per annum-----	\$1,800,000.00
Bonus of one per cent., payable 1st December	150,000.00
Dominion and Provincial Government taxes and tax on bank-note circulation-----	350,000.00
Written off Bank Premises-----	500,000.00
Transferred to Pension Fund-----	150,000.00
Balance carried forward-----	1,783,979.37
	<u>\$4,733,979.37</u>

The report of the Directors alluded as follows to the changes in the Board which have taken place during the year:—

Shortly after the last annual meeting the Vice-President, Mr. Z. A. Lash, passed away. His services to this Bank and to his country are so well known that your Directors need not enlarge upon them. He had been connected with the Bank as its solicitor since 1882, as a Director since 1907, and as Vice-President since 1910. He was loved for his personality, and esteemed for his outstanding ability and his absolute integrity, beyond the fortune of most men. Your Directors also lost by death during the year Mr. J. S. Mitchell, who joined the Board in November, 1918. Identified as he was with the Eastern Townships of Quebec, where his success in business and his unusual capacity were widely recognized, his sudden death was deeply felt by this Board as well as by his fellow-citizens. To fill the vacancies thus created, the General Manager, Sir John Aird, and Sir Alexander Mackenzie, K.B.E., of Rio de Janeiro, President of the Brazilian Traction, Light and Power Company, Limited, were chosen.

After the report had been read the President requested the General Manager to address the shareholders.

## General Manager's Address.

We have now entered upon a period such as has been looked for ever since the war ended—one of lessened activity in business and falling prices—and the statement which we present to you to-day is, except in a comparatively few particulars, curiously devoid of important changes from that of a year ago.

## Greater Profits.

The net profits of the year amounted to \$3,306,243.97, an increase of \$231,351.25, although the resources of the Bank have shown little growth. The addition to our profits has been the result, partly of the activity of general business during most of the year and the consequent brisk demand for money, which has kept all available funds fully employed, and partly of the fact that we have been fortunate in escaping serious losses. The conditions which have prevailed in the markets for all staple commodities since the war ended—the extraordinary demand for goods and the high prices—have caused a strong demand for money. Now that the markets are becoming more normal and prices are falling, that demand is sure to lessen. We may therefore expect easier money conditions and a lower level of profits until business becomes more active.

In addition to the regular dividend of 12 per cent. per annum, we paid last December a bonus of 1 per cent., making a total distribution to our shareholders of 13 per cent. for the year. We have appropriated \$350,000 towards the

heavy taxes we are now called on to pay to the Governments of the Dominion and of the various Provinces of Canada, including in this the tax on our note circulation imposed under the provisions of the Special War Revenue Act of 1915. We increased our appropriation for bank premises from \$250,000 last year to \$500,000 this year. The high cost of all building operations in this country, and our expenditures on premises for the foreign branches recently opened, make this a prudent step.

## Increase to Pension Fund.

We have transferred \$150,000 to the Officers' Pension Fund, an increase of \$30,000 for the year, partly to provide for the growth of the staff, and partly because the actuarial examination, which took place during the year, made it clear that this was necessary. As you know, it is our custom every ten years to have the Fund examined by an actuary, and we base our contributions upon his report. This year it showed that, owing to the increase in the general level of salaries, necessitated by the heavy increase in the cost of living which followed in the train of the war, the sum per head fixed ten years ago as the basis of the Bank's contribution was no longer adequate. It was decided to replace it by a sliding scale based upon salaries, so that hereafter the contribution made by the Bank on behalf of each officer will bear a direct relation to the amount of the pension to be provided for him. Should the cost of living fall and the general level of salaries be lowered, the Bank's contributions will be lowered to a corresponding degree.

## Profit and Loss Account.

After making these appropriations we have been able to carry forward \$1,783,979.37, or \$356,243.97 more than last year. In view of the unsettled conditions at present prevailing in the business world, and the fall in prices which on more than one occasion has threatened to undermine the security for certain classes of loans, we think it well to carry a large unappropriated balance in Profit and Loss Account as a safeguard against unexpected contingencies. Up to the present we have been extremely fortunate, in that our interest has been negligible in those branches of business most directly affected by the heavy declines which have taken place.

## Deposits Increase.

The increase in our note circulation is \$669,255, an indication of a large volume of current business, but a very small proportion of the total, which now stands at \$30,716,914. As business slackens and prices fall we may naturally look for some reduction in this item. Our deposits stand, as a whole, at almost the same level as a year ago, the increase being only a little more than a quarter of a million dollars, but deposits bearing interest, the most stable part of deposit business, have increased by the large sum of \$43,148,818. This is a gratifying and remarkable showing, particularly when considered in the light of the total subscriptions of customers of this Bank to the various Dominion Government War Loans, as reported by our branches, namely:—

1915 1st War Loan-----	\$ 8,142,000
1916 2nd War Loan-----	18,001,400
1917 3rd War Loan-----	22,059,500
1917 1st Victory Loan-----	78,551,670
1918 2nd Victory Loan-----	104,474,950
1919 3rd Victory Loan-----	90,076,535
	<u>\$221,306,055</u>

Notwithstanding the tremendous drain upon the deposits of this Bank which these huge subscriptions involved, we feel proud of the aid afforded by our customers to the Government in its war financing. Courage and foresight were needed by our branch managers when they saw their cherished and hard-earned deposits, gathered over a long series of years, melt away almost overnight, but the fact that the deposits of the Canadian public in this and all other banks

are now double what they were at the outbreak of the war justifies the support given to the Government in its loan campaigns, even from a narrow and selfish point of view, to say nothing of that of the national welfare.

#### Decreased Government Balances.

On the other hand, our deposits not bearing interest have decreased by \$42,875,453, an amount almost equal to the increase in our interest-bearing deposits. This is more than accounted for by the decrease in Dominion Government balances, which a year ago included a large part of the proceeds of the last Victory Loan. It must also be remembered that both the demand for money and the restraint on the further inflation of credit which we have endeavored to exercise tend to decrease the balances carried by business houses and large commercial companies in their current accounts. Another cause which has militated against an increase in deposits has been the slow marketing of last year's grain. This tends also to keep up loans; for if the farmer does not pay his debts, the retailer is unable to pay the wholesaler, and the wholesaler must lean on the manufacturer. All along the line they will borrow from their bankers to the fullest extent possible.

#### Grain and a Falling Market.

It is regrettable that the farmer, in this and other countries, should be counselled to hold his grain on a market which has fallen very rapidly since the time of harvest and has every appearance of continuing to do so in sympathy with the general trend of business. It is obviously a highly risky and unprofitable proceeding, and likely to end in increasing class bitterness. Unaware of the real causes that govern the decline in prices, the farmer will be apt, naturally enough, to feel that all classes are working against him. The truth appears to be that, after so many years of rising prices, it has come to be accepted as an axiom that prices must continue to rise, and consequently in the very year in which all signs point in a downward direction the unfortunate farmer feels constrained to hold his grain, unconscious of the meaning of the signs around him. There is nothing in the other items of our liabilities which calls for comment, save that we may say, in passing, that the reduction in acceptances under letters of credit no doubt reflects to some extent the difficulties which at the moment confront the foreign trade of this country. To this subject we shall refer again when dealing with the foreign exchange.

#### Lines of Defense.

During the year our holdings of specie have increased \$566,854 and Dominion notes on hand \$3,952,361. There is no change in the amount deposited in the Central Gold Reserves under the heading either of gold coin or of legal tender notes. Total cash on hand has increased \$4,519,215 and stands at 15.14 per cent. of our liabilities to the public, with so-called quick assets at 44.50 per cent. of these liabilities. There has been a reduction in our investments and an increase in our loans. The reduction in the former consists of \$33,763,822 in Dominion and Provincial Government securities and of \$9,109,916 in British, foreign and colonial public securities and Canadian municipal securities. In both cases the reductions are due to the payment of war obligations by the Dominion and Imperial Governments. There has been an increase in call and short loans, both in Canada and elsewhere, the increase in the former case being merely a nominal one. In a time of uncertainty and instability such as the present, it is well to strengthen all our lines of defense, and in the case of loans in New York, the principal call money market of this continent, this has occasioned less sacrifice of profit than is usual, as rates throughout the year have ruled at a high level for that market.

#### A Commanding Position.

This bank still holds a commanding position in the development of Canadian trade and commerce, its current mercantile loans in Canada amounting to the large sum of \$231,114,772, or \$17,925,602 more than a year ago. Similar loans elsewhere have also increased by \$1,924,956. The other items of assets show little change, except Bank Premises Account, which has increased \$758,086 during the year, our principal outlays in this connection being on premises for our foreign branches. Owing to the favorable position of the foreign exchanges, we have been able to secure premises in Rio de Janeiro, Jamaica, Trinidad and Barbados at a very reasonable cost, and our office in Rio de Janeiro will be situated in the heart of the financial and business district of that important city. There has been an increase in our total assets of \$1,116,418, a comparatively trifling amount.

#### Foreign Branches.

In addressing you a year ago we pointed out that up till then we had been occupied with the promising openings for new branches in Canada, but that we hoped soon to give some attention to foreign fields. The policy we have followed in this respect has been one of caution, slow but sure, and we think that our judgment has been vindicated by the course of events, especially the unsettled financial conditions now prevailing in Cuba and South America. Our branch at Havana was the first to be opened, and we are well satisfied with the progress so far made and with our prospects for the future. Kingston, Jamaica, came next in point of time, and there, too, our business shows excellent prospects. Our office was not opened at Bridgetown, Barbados, until after the close of the bank's year, while in Rio de Janeiro and Port of Spain, Trinidad, although our managers and their staff are now on the spot, we have not yet opened for business. We believe, however, that our outlook in all these places is bright.

#### An Increased Staff.

Keeping pace with the growth of the bank's business, there has been a steady increase in the staff, partly through the appointment to the permanent staff of men and women who had served us well during the war and whom we have found suitable. It was thought that on the return of our men from overseas most of those on the temporary staff would have to give way to permit their reinstatement, but we are pleased that the growth of our business has made it possible for us to adopt the policy we have outlined. An increase of thirty-four in the number of branches also accounts to some extent for the increased staff.

#### New York Exchange.

Probably at no time in the history of this country have questions connected with the foreign exchanges occupied so prominent a place in the public mind as during the past year. The closeness of our relations with the great English-speaking nation to the south of us has made the prevailing high premium on New York exchange a matter of moment to a very large number of Canadians. It has come before them not only as vitally affecting importers or exporters dealing with the United States, but also, among other things, as having a direct bearing on many investments which they hold or desire to buy or sell, and even as calling for serious consideration in connection with the cost of a holiday or other visit to that country. The very technicality of the subject, the mystery by which in the popular mind the working of the exchanges is surrounded, only serves to deepen the interest felt in it. In an endeavor to throw some light upon it, especially as connected with the prevailing high premium for New York funds, we issued during the year a series of advertisements dealing in as simple a manner as possible with some of the underlying elementary principles. These attracted widespread attention and were subsequently reprinted in the form of a small brochure for general distribution. The subject has, of course, many bearings and can be discussed from many points of view. As an instance we may point out that the premium on New York funds is an assistance to such of our exports as come into competition in the markets of the world with similar goods from the United States. To the extent of the premium, the Canadian producer can accept a lower price expressed in terms of a foreign currency, and will still receive as many dollars as does his competitor in the United States. During the closing part of the year, as you are doubtless aware, the rate of exchange on New York rose very high, reaching 19½ per cent. on December 21, the highest point on record.

#### Causes of High Rates.

In addition to the causes usually assigned for this condition, which were commented on in our report last year, namely, excessive buying from the United States, especially of luxuries, and the payment of interest on our indebtedness to that country, the burden of which increases with every sale of Canadian securities, there are, I believe, one or two others which have played a considerable part in the recent rise. One of these is speculation on the stock exchanges, which has been so prevalent in some parts of Canada. When the stocks speculated in are those dealt in on the New York market, calls for margins have to be responded to instantly, and the sudden demand thus created for New York funds has on several occasions been the cause of a sharp advance in rates. There are also at present large sums of money, belonging to banks and wealthy corporations in the United States, on deposit in the Canadian banks, awaiting a favorable exchange rate, and there has been a demand for the transfer of a large part of these in connection with the

preparation of financial statements and other end-of-the-year requirements.

#### Not Canada Alone.

It may, perhaps, be some consolation to reflect that Canada is not alone among the countries of the world in having to seek the solution of an exchange problem vitally affecting her trade. There are other parts of the British Empire with problems of a similar nature, but even more serious. Quite recently Australian banks have declined to remit in London funds for bills sent to Australia for collection or to negotiate commercial bills on Australia in London. The reason is a shortage of London funds, said to have arisen as a result of the suspension of the system of Government purchase and sale of the Australian wool clip. The old machinery for handling the wool has not yet been restored, and in the meantime some difficulty has occurred in financing Australian imports. It is hoped that the situation will be relieved before long when exports of Australian wheat, wool and meats go forward. The situation in India, New Zealand and South Africa is of a somewhat similar character, but not so pronounced.

#### Foreign Trade and Finance.

It is unfortunate that these exchange difficulties should arise just at the time when strong efforts were being made to extend the foreign trade of Canada. Undoubtedly the situation as regards foreign trade is a most difficult one at the present time, not only because of exchange questions but also because of the instability of the financial situation in many foreign countries. The collapse of sugar prices in Cuba and elsewhere is one instance of this, and in a period of falling prices all over the world it is admittedly a most difficult matter to extend foreign trade. Nor is the problem rendered any more easy of solution by the high level in Canada of all costs of production, including wages. As pointed out recently by a high authority in England, "only the country in which prices are comparatively low can have an export balance in its favor." It is to be feared, therefore, that until some readjustment of the situation takes place, there can be little probability of any material extension of our trade abroad.

I am not among the number of those who consider that there is need of a central institution, or bank of rediscount, for the purpose of financing extensions of foreign trade. In my view, the facilities which are now available to the banks under the provisions of the Finance Act of 1914 are amply sufficient for all that is required, and while primarily a war measure the principles embodied in it may well serve us in times of peace.

#### Government Ownership.

The important experiment has recently been tried by the Dominion Government of placing the management of the publicly-owned railway lines in Canada in the hands of a corporation, the ownership and control of which reside in the Government. The experiment is an interesting one, and bids fair to determine the feasibility of successfully carrying on the business of a great corporation under Government ownership. There have been many obstacles to overcome at the start, and the traffic conditions of the year have not facilitated the task of those in charge, but it is only fair that they should be given full opportunity to demonstrate their ability to carry on the enterprise and to make the experiment a success.

#### Hopeful Outlook.

The year we have just passed through has been one of surprises. At its commencement the tide of rising prices seemed unchecked, and the idea that a rapid fall was imminent was considered altogether preposterous. Yet this is exactly what has happened. Once again the seller is having to seek the buyer, instead of being besought by him. Probably one of the principal obstacles at the moment to the re-establishment of business on a more normal basis is the instability which prices have manifested during recent months. This condition, however, cannot be of long duration, and we may hope that before the winter has run its course it may be a thing of the past. Meanwhile we repeat once again what we have so often urged, that the whole world must aim to work hard and avoid extravagance if the damage caused to both property and credit by the late war is to be repaired. The President then said:—

#### President's Address.

The year has been as full of highly important events as other recent years, but while much that has happened is very distressful indeed, many of our experiences have been natural and remedial even if disagreeable. War and famine are still

present, although in a lessened degree, but assassination and other forms of murder, by men associated for that purpose, have grown to alarming proportions. As against these bad conditions there have been fewer strikes and some improvement in the attitude and in the efficiency of workers generally. It must also be a source of genuine satisfaction to all fair-minded people that we are now fully entered upon that adjustment of prices, both for commodities and labor, upon the reasonable settlement of which all hope for our future happiness and prosperity rests.

#### The Strain on Credit.

A year ago we were still in the full tide of high prices, high wages, supplies unequal to the demand, inefficient labor, inefficient transportation, reckless spending and all the other concomitants of a world-wide inflation, based not on industrial enterprise, but on the creation of so-called wealth from the evidences of debt issued by Governments living beyond their means. Warnings that continuance meant ruin were not wanting, but they met with little more response than warnings usually do. There was widespread unrest, as labor did not remain satisfied with any strike adjustment which immediately met higher prices for commodities. Bankers found it impossible to grant credits which were steadily made larger by two proportions, larger quantities and higher prices. Thus, with the efforts of Governments to economize, came the lessening of the stream from which deposits are derived, and hence a curtailment of bank credits.

#### The Effect.

This seriously affected the stock markets in the latter part of 1919, and as bank rates in Great Britain and the United States began to rise and the collapse in raw silk took place in Japan, other commodities began to follow, and raw silk, rubber, hides, sugar, cotton, manufactured textiles, clothing, boots and shoes, field products and meat in certain forms, one by one, have had declines in price, often sensational beyond anything in recent years.

#### Our Foreign Trade.

Reviewing as usual our own foreign trade, we find the total of exports and imports for 1920 to be \$2,351,174,000, as compared with revised figures for 1919 of \$2,188,471,000, and for 1918 of \$2,549,681,000. Unfortunately the increase over 1919 is almost entirely in imports, so that the increase in volume, far from being gratifying, is distinctly the reverse. With a slightly larger total of exports, we imported nearly 150 millions more than in 1919. Thus the excess of exports fell to the lowest point reached in the last four years. The fiscal year ends in March, but the unfortunate tendency of our foreign trade is much more evident when we compare the six months' period ending in September. During that period in 1919 our surplus of exports was \$151,037,000, while in 1920 we have actually imported \$151,145,000 more than we have exported, a change for the worse of over 300 millions and a complete reversal of our trade position. The position of our exports for the fiscal year, taken alone, is quite satisfactory. During the war our exports were swollen by the item of explosives, but this has now been reduced to small figures. It amounted to 386 millions in 1918, to 251 millions in 1919, and to only 12 millions in 1920; so that to keep our exports from diminishing we had to find new merchandise to export in 1920 amounting to about 240 millions, and we actually did so to the value of about 257 millions. The increases under the general headings are as follows: grain, flour and all vegetable products (except chemicals, fibres and wood), 127 millions; animals and their products (except chemicals and fibres), 69 millions; fibres and textiles, 6 millions; wood and wood products and paper, 59 millions; ships, 28 millions. Against this we have important declines in copper, nickel, gold, silver and other metals and metallic products of about 25 millions. In the six months' period ending September, we have, however, a great change. In grains, flour, etc., we have a loss of 45 millions; in animals and their products, 53 millions; in fibres, etc., 3 millions; in various other items, 15 millions; while in wood, paper, etc., there is a gain of 63 millions, and in iron, other metals and non-metallic minerals, there is a gain of 13 millions. The total shows a falling off of 40 millions.

#### Increase in Imports.

It is in our imports that we have exhibited a most unfortunate lack of appreciation of individual and national responsibility. Our imports for the fiscal year ending in March were 145 millions larger than in 1919, but since one item connected with the war, articles imported for the Army and Navy, amounting in 1919 to 50 millions, has practically disappeared, we have gone wrong to the extent of nearly 200

millions. The excess of 83 millions in vegetable products covers such items as distilled beverages, 7 millions; fruits, 11 millions; rubber, 5 millions; sugar, 34 millions; tea, coffee, etc., 12 millions. The excess of animals and their products is 53 millions, of which the large items are: furs, hides, leather, etc., 30 millions, and meat, 16 millions. The excess in fibres, textiles, etc., is 53 millions, of which the large items are: cottons, 14 millions; silks, 11 millions; wool and its products, 23 millions. In the various forms of machinery and material coming under the heading of iron and its products, there are large increases and large decreases in individual items, the net result being an increase of less than 5 millions. In coal products there is a decrease of 16 millions. The whole result is bad, but it is trifling when compared with the six months' period ending in September. For this half year, in which our exports declined under each general head except wood, and metals and other minerals, we actually imported 152 millions' worth of merchandise in excess of our exports. Except in the one item of animals and their products, there are increases of from nearly 50 to over 100 per cent. under all general headings.

#### Exports to Great Britain.

The excess of exports to Great Britain, which in 1918 was as high as 779 millions, was in the fiscal year 1920, 370 millions, still a very satisfactory figure. For the six months' period, however, it fell from 236 millions in 1919 to 28 millions in 1920. The excess of imports from the United States for the fiscal year was 300 millions, against 272 millions in 1919. For the six months' period it was 210 millions, against 135 millions in 1919. When we look at the third set of figures now supplied by the Government, that is, from September, 1919, to September, 1920, the full force of our extravaganza is evident. In that period we exported less by 23 millions than in the previous twelve months, and we actually imported 440 millions more.

#### Fatuous Extravagance.

It is painfully evident, however, that we waste our breath by setting out these figures year after year. Nothing but inability to buy will check such fatuous extravagance. Is it to be wondered at that people coming to Canada from Great Britain are shocked and profoundly astonished at such lavish expenditure of money at a time when the world is so full of real trouble?

#### The New United States Tariff.

If we turn to the figures for our foreign trade we find that our exports consisted in value of 639 millions in manufactured articles and 648 millions in foodstuffs. These foodstuffs were shipped to Great Britain to the extent of 368 millions and to the United States to the extent of 134 millions. Foodstuffs thus form a most important part of our power to pay for imports of 801 millions from the United States, of which, by the way, 126 millions represent foodstuffs bought by us from them. Trade between countries, however much confused with foreign exchange and postponed settlements by sales of securities, is a matter of exchanging merchandise. How could we have imagined, therefore, that the United States, the creditor nation of the world at the moment, while awaiting a revision of their tariff looking to higher protection, would pass in Congress a bill placing an embargo for ten months upon foodstuffs shipped by Canada and other countries, all of whom are doubtless depending on these products to pay for the products they are buying from the United States? These are the days of embargoes, tariff revisions and newly devised schemes to preserve prices, which are doomed to readjustment, but we can only hope that the Senate will not approve of such unfriendly and destructive legislation. It is evident, in view of the present relations of the American and the Canadian dollar, that our rejoinder must be to put an end to an equal amount of purchases from the United States.

#### The Cattle Embargo.

Reflection on the markets for our exports brings up the question as to how long the British embargo on Canadian cattle is to last. For about thirty years, during which time Great Britain has been supposed to be a free-trade country, our live cattle have been excluded from the British market, unless immediately slaughtered, on the pretext of the necessity of keeping British herds free from disease. No proof of any danger from our cattle has been shown, and it is generally admitted that the embargo is simply a case of extreme protection for British cattle breeders against the interests of the meat consumers of Great Britain, and particularly against the business interests of about 40,000 British butchers who wish it removed. May we not hope

that in this day, when the problem of feeding the people of Great Britain is so difficult, such an irritating obstacle may be removed? If the British meat consumer understands that there is nothing whatever the matter with Canadian live stock as such, and still desires this protection for cattle breeders at home, we, of course, have nothing to say, but we should like to feel sure that he does understand.

#### Our Field Crops.

The value of the field crops of Canada for 1920 is estimated by the Dominion Bureau of Statistics at \$1,636,664,000, as against revised figures for 1919 of \$1,452,437,000. An important change has been made in the preparation of this report. Hitherto it has been prepared by the Bureau for Canada as a whole. Now it has the benefit of consultation with each of the nine Provincial Departments of Agriculture. The prices also are taken from those current in the respective localities, and in view of the falling tendency at present, the total estimate may, therefore, turn out to be too high. The increase in the estimate of about \$184,000,000 is derived from increases in wheat of \$172,000,000, in potatoes of \$21,000,000, in hay and clover of \$16,000,000 and in roots of \$4,000,000, with decreases in oats of \$10,000,000, in barley of \$17,000,000 and in other grains of \$2,000,000. We have about 100 million bushels more wheat than in 1919, so that the accuracy of the estimate depends much upon the price of this grain. We have 148 million bushels more of oats, the largest yield on record, yet the price has fallen so that the money value of the whole crop is \$10,000,000 less than in 1919. On the other hand, hay and clover, while less in quantity, yield more, the price for hay being the highest in our history. Saskatchewan, with \$412,000,000, and Ontario, with \$396,000,000, provide about one-half of the value of all the field crops in Canada.

#### Mineral Production.

From such information as we can obtain, the total value of the mineral production of Canada for 1920 is probably \$200,000,000. This compares with the great year of 1918, when the total was \$211,301,000, and is well above 1919, when it fell to \$176,686,000, because of the reaction following the war. In the rebound from this reaction there has been an increased production of coal, asbestos and other non-metallic products, and of pig iron and steel, of copper, nickel, zinc and, in a slight measure, of gold. There has been a falling off in silver and lead. The production of coal, asbestos and zinc has been larger than in any previous year. The prices of metals, except silver, were well maintained during the first nine months of the year, and the decline later has not reduced the average below that of 1919.

#### The National Debt.

The public debt of the Dominion, which at 31st March, 1919, was estimated as being under \$2,000,000,000, is at 30th November, 1920, eighteen months later, stated to be \$2,298,784,000, but against this are held certain non-active assets, consisting chiefly of railway loans and amounting to \$284,015,000, which were heretofore deducted from the total. During the fiscal year ending March, 1920, expenditures chargeable to the war, amounting to \$346,192,000, were made, followed by only \$8,963,000 during the six months ending 30th November, 1920. We may therefore hope that the back of our direct war expenditure is broken. There is still due by Great Britain \$162,000,000 and by foreign governments \$45,000,000, but the amount due by Great Britain has been deducted in estimating the net debt. As the heavy payments caused by the war are now nearly at an end, we can, having regard to established systems of taxation, begin to estimate our actual position as to debt and our capacity to deal with it.

#### Sales of Securities.

The sales of Canadian securities for 1920 have, of course, fallen to lower figures because of the absence of popular Dominion Government loans in Canada. The figures are as follows:—

Security.	Amount.	Canada.	United States.	Great Britain.
Government .....	\$115,455,500	\$ 9,035,500	\$ 74,430,000	
Municipal .....	58,094,728	49,312,496	9,682,232	
Railway .....	96,500,000	.....	96,500,000	
Public service corporation .....	1,500,000	200,000	1,300,000	
Miscellaneous .....	38,381,853	16,106,853	22,275,000	
Total, 1920 .....	\$318,832,081	\$104,654,849	\$214,177,232	
Comparative figures for 1919 .....	\$909,383,728	\$699,291,995	\$204,987,500	\$5,105,133
	100%	32.82%	67.18%	
	100%	76.89%	22.54%	57%

We have again been given by a most competent authority an estimate of the amount of our securities held abroad. These are now estimated at \$2,189,000,000 held in Great Britain and European countries, and \$1,441,000,000 held in the United States. If we calculate the interest on the

former, which were financed before the war, at 4% per cent., and on the latter at 5½ per cent., the total of our interest payments would be about \$183,000,000 annually. Doubtless there are securities held abroad which are not included in this calculation, and the high rates lately paid for loans may increase the average beyond the rate of 5½ per cent., so that the actual amount we have to pay is doubtless midway between 183 millions and the sum of 190 millions suggested a year ago.

#### Shrinkage of Credit.

A year ago the cry in every direction was for more production and more efficiency in labor, better and less costly conditions in transportation, and a cessation of Government borrowings and of credit inflation. The enormous quantities of unsold commodities at the present time seem inconsistent with the cry for greater production at that time, but it is doubtful if there is any real inconsistency. Except for stocks of certain commodities held by Governments who continued to exercise control over trade and did not liquidate these stocks at the close of the war, it is questionable if there are more commodities than the world needs for its ordinary comfort. The trouble does not arise from over-production, except as to luxuries, but from a sudden shrinkage of credit operations, a vast psychological change in the middlemen who buy and sell between the producer and the consumer, and following these factors, and to some extent because of them, from a sudden falling away of the buying power and a distinct change in the desire to buy, of the people generally. From a period of expansion marked by the most extravagant buying ever known, we have entered upon a period of liquidation. We are just as bent now on finding a sure bottom as we were on finding the dizzy top a year ago.

#### Decline in Prices.

The Monthly Review of the Federal Reserve Bank in New York at the close of November quotes the decline in commodity prices from the peak as about 10 to 14 per cent. in Great Britain, 11 per cent. in Canada, in the United States various estimates from 14 to 33 per cent., in France 14 per cent. and in Japan 28 per cent. The decline of the past six months in the United States is said to be more abrupt than anything since the same period at the close of the Civil War. While there must have been countless perplexing and grave problems, often involving totals in money which were enormous relatively to past experience, it is greatly to the credit of modern banking in most countries that we have been able to meet these situations as they have arisen. Embargoes and moratoriums are still necessary, and the foreign exchange difficulties are not always subject to settlement by a mere premium or discount in the rate.

#### Cancellation of Orders.

Trade with countries other than distressed Europe has been threatened with stoppage until bankers devised new expedients for bridging difficulties not met with for many years, if ever before. The stoppage in buying and, what is much worse and not creditable to modern conditions of trade, the cancellation of orders, have so disturbed the calculations of manufacturers and merchants that borrowings from the banks, and by note and bond issues from the public, have been necessary in the United States on a scale never known before. The liquidation which has set in will bring about easier monetary conditions as the natural accompaniment of less active trade and the decline in prices, and, unfortunately, we can already see that many will be out of employment during the coming winter.

#### Unemployment.

In the United States, as usual, movements are more acute than in Canada, and in some branches of trade, such as motors and clothing, employment has fallen as much as 50 to 75 per cent. On the whole, what with some trades in a better condition and with labor needed in farming and lumbering, heretofore very short of workmen, the lessening of employment is not very prevalent as yet. The unemployed of course congregate in the cities and raise grave questions which had better be met by public works, where labor is given in exchange for pay, than by doles which tend to break down the individual effort on which our society is based.

#### Immigration Increases.

It is unfortunate, although quite natural, that at such a moment immigration shows its first great movement since the war. In 1913 a trifle over 400,000 immigrants came to Canada and in 1914 about 385,000, so that, but for the war, 1914 would clearly have been a record year. During the war

the immigration was nominal, only 50,000 to 75,000 annually, but in 1920 the figures reached about 120,000, with the promise of a much more active movement as soon as rates are lower and passages more easily obtained. In 1913 immigrants came from the following sources: Great Britain 150,000, United States 139,000, and all other countries 113,000. In 1920 the proportions were 59, 49 and 8. In both years the immigrants spread themselves reasonably well over Canada, Ontario, however, receiving twice as many as any other province. The proportion of immigrants from the United States who are farmers is about the same as before the war, and doubtless many others from that country are land seekers, but the proportion of farmers or farm workers from other countries, including Great Britain, is much smaller than before the war. We must hope that the present readjustment going on throughout the world will increase the number of land seekers, because although we must prevent undue immigration while our own people want work we shall always desire as many as possible to go on the land for a living.

#### The Soldier Farmer.

In connection with land settlement and post-war work for our soldiers, a recent report of the Soldier Settlement Board is encouraging. The plan provides for loans for buying land up to \$5,000, or 90 per cent. of the value, in each case, amortized over 25 years on the basis of 5 per cent. interest per annum, and for loans up to \$2,000 for stock or equipment, payable in six amortized payments on the same interest basis, and of \$1,000 for permanent improvements payable in the same manner as the land purchase. Over 57,000 soldiers have applied under the plan, over 41,000 have qualified and 20,000 are already on the land, while over 1,000 are in training with farmers. To settle these 20,000, slightly under 80 million dollars has been necessary, as against a possible 160 millions under the Act. Soldiers have made first payments amounting to four millions, while crops have already enabled further payments of nearly two millions to be made. In the Prairie Provinces alone, the soldier farmers have produced about 20 million bushels of grain.

The care taken in estimating the qualifications of each applicant for successful farming, in selecting the land, in buying stock and implements, the latter at wholesale prices, in counselling and aiding in many ways those who have not yet made good—all suggest an admirable effort to carry out a plan of land settlement, the importance of which reaches far beyond the mere aid to the returned soldier, although that is the prime consideration. Where there are applicants who cannot make the initial payment, the various bodies aiding distressed soldiers are appealed to, and, of course, there are failures after all precautions have been taken. In 150 cases, involving an investment by the Government of \$575,000, only about \$10,000 was lost. The report closes with suggestions regarding land settlement generally, which it is hoped will have the consideration due to such an important question.

#### Pensions to Soldiers.

Perhaps no new form of national expenditure caused by the war interests us so widely as the pensions paid to our soldiers. On the one hand there is an intense desire that justice be done to those who fought for us, while on the other hand there is a grave sense of the weight of the obligation falling upon the new generation to pay such a huge sum annually, in return for which there is not, directly or indirectly, any relative production of national wealth. At the end of 1919 there were 86,429 pensions being paid, at a cost of about \$1,800,000 monthly. During the year, by the payment of \$5,710,000, pensions were commuted to the extent of 14,292, and the number of pensions in force at the end of 1920 was 73,278. Further commutations are expected, bringing the total to about 18,000, on which about \$7,200,000 will have been paid. At the moment our monthly outlay for pensions is about \$2,500,000, but commutations will probably reduce this to about \$1,850,000.

#### Taxation.

In speaking last year about the manner of distributing the taxation necessary to carry our debt and to administer the Government, we expressed the opinion that if the annual payments are obtained by reasonably fair taxation, so levied that the taxes do not become a cause of restraining our industries, we shall not fail to win through, but, to accomplish this, much study of the subject is necessary. It must be admitted that the war has imposed upon Governments the necessity for collecting an amount of taxes beyond any past experience, and it should be evident that the total required can only be obtained by contributions on some scale from practically the whole body of the people. It is quite true that regard must be had to the capacity of the individual

to pay, but in levying super-taxes no folly can be greater than to overlook the effect of excessive taxation on our industrial activities, not only as to future growth, but as to the present power to give employment to the wage-earner. We do not hesitate to say, now that the war is over, that some of the present forms of Dominion taxation, while justifiable during the war period and the period immediately succeeding it, are in danger of becoming destructive of enterprise and perilous to our future if not altered. As the forms of taxation to which I shall allude are similar to those of other countries in which the same evil results are apparent, and in which the tide of opposition is rising rapidly, I trust my remarks will not be regarded as a criticism of our Government, whose tasks during the war and since have been most difficult and onerous. We must suppose that these forms of taxation are experiments which are subject to speedy change if found to be too burdensome and unfair.

#### Tax on Sales.

As against the "luxury" taxes now happily at an end, we have steadily urged a turnover tax of one per cent. on sales of commodities. We are aware that criticism, only however regarding certain details, of this form of tax have been made in the Tentative Report of the Tax Committee of the National Industrial Conference Board of New York, but these have been answered by the Chairman of the Business Men's National Tax Committee. One of the arguments made in the United States against it is that any tax which bears in the same rate upon the small earner as upon the large is unfair. But this is accompanied by the belief that a turnover tax would provide such a revenue as to displace the excess profits tax. I believe it would only provide a substratum of tax revenue, in which it is true that all would join alike, paying in precise proportion to their expenditures for commodities, but the manner in which those who have larger incomes would be taxed through the income tax would provide for that difference in treatment which modern taxation recognizes. A small tax on the sales of commodities and real property in Canada would hurt so little, would be so fair, would be so easily collected, and would produce such a very large sum, that to fail to levy it seems excusable only if it can be shown to be impracticable.

#### Surplus Profits Tax.

We are levying heavy surplus profits taxes, and many well-intentioned people think that we are justly punishing the so-called profiteer, but we are really killing the goose that lays the golden egg. When he can do so, he doubtless passes the tax on to the consumer, and escapes punishment himself, and the tax thus becomes a boomerang as far as the public are concerned. If we clearly know what we mean by a profiteer and can find him, let us punish him in such manner that the penalty imposed cannot be passed on to the ultimate buyer. But in ordinary cases, which affect by far the greater part of the business community, we are taking from enterprise the profit with which further enterprise would be created. It is from the accumulated profits of a business that growth both of plant and scope of operations mostly becomes possible. What do we think will happen if we steadily take such a large share of that profit away? It will be said that some concerns make too much money. But, as we argued a year ago, that should be demonstrated by the relation not of profits to capital but of profits to turnover, measured again by the proportion of possible turnover to capital. The manufacturer who turns his capital over many times, serving the public for a trifling profit on each sale, but making a large return on his capital because of his skill and activity, should surely not be punished by excessive taxation for being an excellent servant to the people. The tax is universally admitted to be unscientific and will do incalculable damage if continued. It was justified only by war conditions and only for the period of their duration.

#### The Income Surtax.

The surtax features of the income tax, when carried to the extreme percentages now in effect, are little less unwise and unfair than the excess profits tax. Those who are large shareholders in business enterprises should be ready to take up new share issues in such enterprises, as extensions may prove necessary. Taxation which first takes a large share of the profits from the company, and then a large share of the dividends of the same company because they happen to be part of a large private income, may seem to be sound policy to many, but if what we seek is the general good, it is deadly in its effects upon business enterprise and industry. I believe every good citizen in Canada wishes to pay for part of the cost of the war. He only desires that his ability to pay shall be regarded. A tax on the turnover of all busi-

ness transactions would punish no one, and yet would mean the reaching of a most important sub-stratum of the national income, in the creating of which everybody has joined. Upon real luxuries an excise tax might well be placed without resulting injury to trade. The articles selected should manifestly be luxuries in the strict sense of the term and clearly recognized as such by the general public.

#### Profits and Taxes.

We are at the moment having illustrations both of the injustice and of the unreliability, as a form of Government income, of the excess profits tax in Canada and the United States. Business men who in a time of high prices would not regard whatever value they might put upon merchandise in stock at the close of their financial year as anything but a *pro forma* method of closing their books, and who would keep large balances in profit and loss account as a contingency against a fall in prices, are forced to fix a price for such merchandise, and also to fix, to the satisfaction of the Government, the reserves to be kept against such revaluation. As a result, in the United States at the moment, countless firms who in the great fall in commodity prices have lost a large share of all that has been made in several past years, look in vain for that so-called "excess profit" which the Government exacted from them, and I fear that there are at least a considerable number of business establishments in Canada in the same predicament. The Government is to be a partner in the business when profits are made, but not when losses are made. It is obvious that such a form of revenue must be subject to too great contingencies to be reliable. In the interest of all we must find a system of taxation which will do the least possible mischief to enterprise, instead of making men unwilling to take new risks because the Government seizes so much of the results when there are any and does not share either the risk or the loss.

#### Increase National Income.

While we must for the time being levy enough taxes in some form to pay our interest charges, and to make, as we hope, some steady if slow reduction of the national debt, we should always bear in mind that it is only by the growth of our national income that we can expect again to reach a time when taxes will not be a drag upon our prosperity. We need more people upon the land, but we need more industries as well. We pay away yearly vast sums for imports, many of which should be unnecessary.

We have untouched stores of raw material for many kinds of manufacturing, the non-use of which is even more serious to Canada from the point of view of national finance than unploughed land. We export food by which our foreign debts are partly paid, but we import what we should make ourselves and thus create foreign debt. The present high rate of exchange on New York is the concrete expression of this debt, not only of that being created to-day, but in the form of annual interest payments, of all the foreign debt we have created in the past.

#### Research Work Imperative.

We have iron ores in plenty, but we do not spend enough on research to ascertain their status in relation to other ores in the United States on which we steadily depend. We have about 15 per cent. of the coal areas of the world, so far as such areas are accurately known. It may be that science cannot remove impurities and reassemble the coal so as to make transportation charges possible, and thus relieve Ontario of its great drawback, and the nation of its vast expenditure for the importation of this article, but research should be persistent until we are assured that such is the case. We have lately developed manufacturing processes in which chemistry is the main feature and others dependent on cheap water power, and through these the triple benefit comes to us of giving employment, of enlarging the market for those who sell food and the other necessities of life, and of offsetting or lessening by the selling value of the home-created product the cost of those imports which are the main cause of our present difficulties. We are very glad indeed that our Dominion and Provincial Governments all spend large sums of money in educational and other ways, to aid agriculture. The Dominion Government and some of the provinces also do something in the way of research for other industries, but we have come to a juncture where, along with the ordinary desire for progress, comes the heavy pressure of national debt which can only be relieved by increased production. For this we need research in countless directions, and in addition to what is not being done, I hope liberal aid will be given to all of our universities and that the scope of our Government research work may be enlarged.

**Trade with West Indies.**

A very interesting convention took place in May and June, at which representatives of the West Indies and British Guiana met the Canadian Government in an effort to increase our trade with each other and improve our means of intercommunication. It is said that this is the first time that representatives of all the islands and of the adjacent mainland have met together, and it is gratifying to record that these colonies, which form in one sense a unit of the Empire, came together to discuss Imperial questions with Canada. As a result, an agreement between Canada and some of the West Indian group came into force on 2nd June, and a further agreement, which included the remaining members, was made on 18th June, subject to ratification by all the parties thereto, and in which all of the delegates present at the conference concurred. These agreements are based upon an increase of the mutual preference now granted, an enlargement of the list of products to which the preference extends, and on co-operation in procuring and maintaining better steamship transportation, and, if possible, better cable communication. If we consider the adjacency of the United States to the West Indies and the special relations to the latter of the great fruit company with its lines of steamers, we can readily understand that our hope of a large and reasonably quick development of trade with these parts of the Empire depends on the steamship and cable services we are able to create and maintain. Nothing but the best both in kind and in administration will be of much use. In addition to this West Indian Convention, we had the Imperial Press Conference and the Congress of the Chambers of Commerce of the Empire. We cannot doubt that such meetings of men important in Imperial affairs will both widen our outlook and strengthen our determination that the British people shall merit the leadership in the world's advancement.

**A Year Book.**

Over thirty years ago this Bank began the, at that time, quite unusual practice of presenting at the annual meeting, in the addresses of the President and the General Manager, a review of the industrial conditions of the area in which the Bank was interested. As this widened from Ontario to other parts of Canada, then to the whole Dominion and to

various parts of the United States, later to Great Britain and Newfoundland, and now to the West Indies and South America, it has been necessary to change the manner of imparting this information to our shareholders and to the public. Until 1913 the effort to incorporate it directly in the addresses was continued. Then it was decided to present it in what has been called a Review of Business Conditions, in the extended form in which it reaches us from the Superintendents and other officers who make these annual reports to Head Office, and this has been supplied with the annual report to the shareholders and the public. About four years ago the Bank found it desirable to establish its Monthly Commercial Letter, which has made for itself a very extensive circulation, and it has now been concluded to publish as early as possible after the annual meeting a Year Book, in which the Review of Business Conditions, now grown to larger proportions than ever, will appear, together with material of special interest gathered from the Monthly Commercial Letter and from other sources.

**The Sin of Extravagance.**

Among the lights and shadows of the world there are at the moment too many shadows to warrant anything but anxious care. You have heard from the General Manager the results of the best year the Bank has ever had, and thus far we have not much evidence of a decline in the spending habits of our people or that hard times are ahead of us. We know, however, that here as elsewhere all prices, whether of commodities or of labor, must be reduced to a more reasonable basis, and the effect of the world's lower price for farm products is already plain to all. When this readjustment has reached the retail shop and a new basis of values has been generally accepted, a genuine prosperity will arise throughout the world in which we shall have a large share. We shall merit and we shall secure that prosperity in proportion to our good sense in realizing now that our particular sin is extravagant expenditure and willingness to incur debt.

The report was adopted unanimously. Messrs. T. Harry Webb, C.A., and Douglas Dewar, C.A., were appointed auditors, and the usual votes of thanks to the directors and staff were passed. The meeting then adjourned.

## PROTESTS REGULATION OF INSURANCE COMMISSIONS

### A. H. C. Carson Points Out That Commissions' Increase Has Been More than Offset by Reductions in Other Expenses

IN a protest to the Ontario government regarding the proposal to limit fire insurance agents' commissions, A. H. C. Carson, president of the London Mutual Fire Insurance Company, says:—

"To carry any weight, such a protest must be backed by strong argument. I would, therefore, beg your attention to the following comparative figures, taken from the Dominion Blue Books for the years 1899 and 1919:—

	1899.	1919.
Average rate of premium charged by Canadian companies .....	1.27	1.12
Average rate of expenses of Canadian companies .....	34.41%	40.27%
Actual expenses per \$100 of insurance written .....	43.7c.	45.1c.
Deduct taxes (uncontrollable expenses), taking London Mutual figures for purposes of comparison (1899, 59% of 1.27; 1919, 3.15% of 1.12).....	.75	3.5
Balance being controllable expenditure..	42.95c.	41.6c.
Average rate of commission, approximately .....	15%	20%

"It would, therefore, appear that the average rate of premium has been reduced from 1.27 per cent. in 1899 to 1.12 in 1919, or 15 per cent. per \$100 in 1919, but that the cost within the power of the companies to control has been reduced from 42.95c. in 1899 to 41.6c. in 1919; therefore, while the rate of commission has increased possibly 5 per cent., the increase has been accompanied by a decrease in cost to the public and a decrease in the controllable expense of the companies. I would respectfully ask you, sir, in what other business you can find similar results in a comparison between the years in question.

"The fire insurance business, in common with all others, has had to contend with increased expenses of every kind during the past few years, and the fire insurance agent has had to get an increased commission to enable him to live in reasonable comfort, and a business which can meet increased expenses and pay increased commission and still show the results given in the above comparison is not in need of legislative interference, nor is it being conducted in a manner detrimental to the public interest.

#### Would Ruin Agents' Business

"Again, there are many hundreds—possibly thousands—of agents in this province who have spent the greater part of a busy and honorable business career in building up a fire insurance agency business from which they derive a living income, but from which none, to my knowledge, have ever amassed riches. Your proposed legislation would have the immediate effect of reducing the incomes of these men from twenty to twenty-five per cent. These men all give expert and conscientious service to the community, and they perform an important function in the economic life of the country. No criticism of their work or their remuneration has been voiced by the public, and it is not proposed to compensate them in any way for the income of which they will be deprived. The reason given for this proceeding is the public interest, but, sir, a gross injustice to a section of the public can never be in the interest of the public as a whole. If these men had in any way abused their position or taken advantage of conditions at any time to improperly acquire profit, some legislative interference might reasonably be considered, but I doubt if any class in the community has more faithfully endeavored to promote the common good with less profit to themselves than fire insurance agents. If the government considers it necessary to perpetrate an injustice on one section of the community in the public interest, why not bring in legislation reducing the profits of food producers by 20

to 25 per cent., and so materially lower the cost of living. There is no more logical reason why insurance agents should be picked out than farmers, and the results to the public, if farmers were the unfortunates selected, would be infinitely greater than can possibly be the case with insurance agents.

#### Commissions on Dwelling-Houses

"Again, particular attention has been directed to the commissions paid on dwelling-house business. Of necessity, commissions on dwelling-house business are larger than those on mercantile business. Every merchant knows that the cost of selling low-priced articles is greater proportionately than the cost of selling high-priced articles, and particularly is this the case when the low-priced articles turn over slowly. Dwelling-house business commands the lowest rates of premium, and it almost invariably comes up for renewal in three-year periods. It is also the class of business most difficult to acquire. Why this should be so it is hard to say, but any fire insurance manager will bear me out as regards the difficulty of obtaining dwelling-house business. A certain number of our more wealthy citizens may possibly take sufficient interest in their dwelling and contents to make enquiries regarding fire insurance, but even with them the initial insurance is frequently, and the renewal insurance almost invariably, left to the agent or broker with whom they deal, while the middle and working classes, whose property constitutes possibly 95 per cent. in number of the total dwelling-houses, with the exception of such insurance as is insisted upon by mortgagees, practically never insure without solicitation, and then only to a ridiculously inadequate extent. This class of fire insurance resembles in many respects industrial life insurance, the amount of canvassing necessary, the difficulty in making collections, and the hard and constant work entailed in all weathers and at all hours of the day and night allaying the two classes of insurance very closely. The Toronto agent who, by house-to-house canvass, writes and collects \$100 of premiums, has well earned \$25, and if, owing to reduced commissions, this branch of the business is neglected, the inevitable result will be an appreciable increase in the number of fires where no insurance is carried. This is not in the public interest.

#### Effect on Number in Business

"Again, you will probably argue that a reduction in commission will reduce the number of agents and increase the average turnover and profit. I do not agree. Insurance agents, in common with other poor mortals, are subject to the limitations of time and space, and I doubt if a doubling of their present turnover with the new commission rate would more than give them the equivalent of their present income, for it would greatly increase their overhead expense and the bad debts inseparable from the business.

"Again, it is the object and aim of all insurance managers to attract to and retain in the business as agents men of character and ability, and to eliminate as far as possible agents who do not show a disposition to realize the responsibilities of their position; and there is only one way to attract the right class of man, and that is by way of adequate compensation. Your proposed bill defeats this object, and is, therefore, contrary to the public interest.

"In my opinion, the proposed bill is class legislation, Bolshevistic in its utter disregard for rights of long standing, savoring of the government control, which, as a war measure, met with some success, but which has recently been abolished in the public interest, and contrary to the law of supply and demand, and consequently foredoomed to ultimate failure, and I trust that saner counsels will yet prevail and prevent it blotting the page of the Ontario Statute Book."

In Toronto the courts have decided against the city in the appeals brought by Wm. Davies, Ltd., and other firms against the 60 per cent. assessment on their retail stores. Judge Denton held that the retail stores occupied far more valuable sites than the factories, hence the 25 per cent. assessment on the former and the 60 per cent. on the latter.

# AGENCY COMMISSIONS ARE NOT TOO HIGH!

**R**ECENT propaganda published by the instigators of the proposed legislation to reduce agency commissions has not met with any public response. The insurers of this Province have again and again expressed their satisfaction with the moderate rates charged by the Fire Insurance Companies, and which were not increased during and since the great war. Furthermore the public realize and appreciate the splendid services rendered by fire insurance agents—not only in the careful inspections and consequent improvement of their risks, the placing of their insurance requirements—the convenient system of credit that is alone carried by the agent—but in the service and advice that is at all times available during the currency of their contracts.

**T**HE vague promises made that the proposed reduction in agency commissions may later result in reduced fire insurance rates is not given credence by the insuring public. All too skeptical of the results of any and all of the public investigations into various matters—held from time to time—the general feeling exists that the Masten commission did not reveal any abuses in the Fire Insurance business. Therefore any recommendation made as a result thereof is simply looked upon as an attempt to do something to justify the expense incurred to the Province. The whole proposal to reduce agency commissions could easily be classed as silly and absurd were it not for the determination of the Superintendent of Insurance for Ontario to bring the Bill before the coming session of the Legislature.

**W**HY Fire Insurance Agents—the one class of business men who have not and do not profiteer—should be the first victims of the axe allegedly swung to cut the high cost of living—is quite beyond comprehension. It is apparent, however, that the drafter of the Bill, supported by the Superintendent of Insurance, and a few companies (obviously for selfish reasons), are quite prepared to disregard all the rights of Fire Insurance Agents, and to fight this Bill through the Legislature. It is class legislation of the worst kind and as such should be speedily thrown out of the House by the Government and Opposition combined.

**T**HE Drury Government has always prided itself upon the absence of camouflage and subterfuge in all Bills that have been passed to date, and in this particular case they have a splendid opportunity to prove their sincerity. If the members of the Cabinet and of the Government honestly feel that Fire Insurance rates are too high, then legislate a direct reduction. Compel the companies to reduce present charges by, say, ten per cent., without the roundabout and foolish idea that a reduction in agency commissions may later accomplish this result. By so doing they will gain the approbation of the public without incurring injustice and hardship to a class of men who have rendered splendid service to the people of this Province.

**T**HE Superintendent of Insurance in his proposal to abolish the chief or general agencies in Toronto has demonstrated his ignorance of the best methods of serving the public. His idea of substituting branch offices in lieu thereof would certainly increase rather than decrease the cost of securing business. Merchandisers all over this continent have, after costly experiment, abolished branch offices in favor of agencies, having found the latter are more conducive to increased production at greatly reduced costs. In this respect, reference should be made to the Ford Motor Car Company, Massey-Harris Company and many other giant businesses which operate almost exclusively on the agency system.

**F**IRE Insurance Agents are entitled to all of the commission at present paid them. Their work requires long hours and hard and persistent endeavor and much work that is not attended with results. Their business requires a capital investment in many cases as large as a store business. Any attempt to reduce their remuneration will drive many of the best men into other fields, and as a result the large number of homes in Ontario that are uninsured will be greatly increased. The public should not be fooled by this Bill, which we really believe is ultimately to benefit a few companies rather than the insurers of the Province.

**Agents all over Ontario should unite in fighting this Bill to reduce their Commissions. Interview your local member and convince him with the iniquity of the proposed legislation**

## Merchants Fire Insurance Company, Toronto

WITH SEVENTY THOUSAND "SATISFIED" POLICY-HOLDERS  
IN THE PROVINCE OF ONTARIO

## NOVA SCOTIA LIFE UNDERWRITERS

The Nova Scotia Life Underwriters' Association held its annual meeting on January 8 in Halifax. The report of President Wilson showed the association to have added about 30 per cent. to its membership during the year, and that important legislation affecting insurance had been enacted by the local house at the request of the association. The treasurer's report showed a large increase in receipts and a very satisfactory year. The officers were elected for 1921 as follows: President, F. G. Taylor, Mutual Life, of New York; vice-president, G. R. Smith, Great West Life; treasurer, H. G. Raymond, Canada Life. Executive—H. S. Crosby, North American Life; K. Cox, Metropolitan Life; J. T. Wilson, Canada Life; S. V. Freeman, Mutual Life, of New York; C. K. Ives, Sun Life.

## BANKER PREDICTS MORE CAREFUL FINANCE

"Our particular sin is extravagant expenditure and willingness to incur debt." This remark of Sir Edmund Walker, president of the Canadian Bank of Commerce, made at the annual meeting of shareholders on Tuesday, came as the conclusion to a thorough review of business conditions and political questions as they relate to business. Sir Edmund diagnosed the condition of Canada. He sees the germs of sickness, but he has high hope for the patient. He looks for it to grow steadily sturdier, but only by facing the facts that dangerous germs of false economics do exist—that bad and questionable habits of private and public finance must be replaced by saner habits. As a means to this end Sir Edmund welcomes the present period of readjustment, when values are being brought not only to a basis of productive costs but of reproduction costs.

Sir Edmund sees an improvement coming only because of dire necessity. "Nothing but inability to buy will check such fatuous extravagance." There is a bright side, fortunately, to offset this decreased margin of export excess over imports. It is the fact of increased value of field crops, mineral production well in excess of that of 1919, and the fact that war expenditures have virtually ceased. Sir Edmund makes it clear that Canada can, if Canadians will speedily get the important excess of export over import more nearly to the old ratio.

Among the statistics of universal interest given in Sir Edmund's address are those of Canadian securities held abroad. These he estimates at \$2,189,000,000 held in Great Britain and Europe, and \$1,441,000,000 held in the United States. This means an annual interest bill of somewhat over \$183,000,000.

Referring to the need of revenue to meet this and other charges Sir Edmund spoke very plainly on methods of taxation, upholding the idea of a turnover tax, and urging careful consideration before imposing drastic supertaxes on incomes, or heavy taxes on industry. Taxes had been imposed during the war under the urge of huge and immediate revenue. Of necessity some of these taxes were really experiments. It is nothing against the judgment of those who levied the tax if now they are found to be against the best interests of the country. The turnover tax of 1 per cent. taking the place of the "luxury" taxes now happily at an end would form a sub-stratum of tax revenue. "A small tax on the sale of commodities and real property in Canada would hurt so little, would be so fair, would be so easily collected, and would produce such a very large sum that to fail to levy it seems excusable only if it can be shown to be impracticable." Too heavy taxes upon profits of industry, and upon incomes, will, Sir Edmund urged, use up the very funds otherwise available for business extensions. Thus would be checked the development of industry which not only gives employment to present and prospective Canadian workers, but increases the National income so that "taxes would not drag upon our income."

## ACTION FOR INSURANCE DISMISSED

Though Campbell Quinn, of Finch, Ont., had been for some years in the motor service business, he did not insure his premises till June 20th, 1919. On July 8th, 1919, fire destroyed his premises with a loss of \$2,304.35. He sued the insurance company to recover \$1,500, the amount of his policy. In his judgment given on December 20, Chief Justice R. M. Meredith comments on the suspicious nature of the fire, which broke out at three o'clock in the morning. Quinn had been acquitted at the inquest which followed the fire of any charge of arson. His action, however, was dismissed with costs.

## B. C. MORTGAGE AND TRUSTS ASSOCIATION

At a meeting of the Mortgage and Trusts Association of British Columbia, held in Vancouver on November 27th, the president, George L. Smellie, manager for British Columbia of the Canada Permanent Mortgage Corporation, placed his resignation before the meeting. Mr. Smellie was requested to reconsider his resignation until the next annual meeting, which will be held in April, 1921. He pointed out that, since he was retiring from business on February 1st, 1921, he thought that it would be the wisest thing to have the meeting accept his resignation at the present time. In deference to his wishes, the meeting accepted his resignation with regret. R. Kerr Houlgate, general manager of Vancouver Financial Corporation, was elected to succeed Mr. Smellie for the unexpired term.

## EMPLOYMENT CONDITIONS BECOMING WORSE

Dominion headquarters of the Employment Service of Canada, Department of Labor, reports that there was another large decline in employment during the week ended December 4. It was reported by 4,852 firms that they had released 10,378 persons from employment since the end of the preceding week, a contraction in the payroll of one and one half per cent. There were increases in four industrial groups aggregating 1,385 employees, but in twenty-nine groups there were decreases totalling 11,763 persons. While a decrease was recorded during the week under review as compared with the returns for the week of November 27, employment was still at a higher level than at the beginning of the year, these firms reporting 2,236 more persons on their payrolls than on January 17. These figures do not include loss of time due to strikes or lockouts.

Increased employment as compared with the returns for the preceding week was registered only in Nova Scotia and New Brunswick. The decrease of 4,922 persons recorded in Ontario was the most pronounced. As compared with the returns for January 17 all provinces except Ontario and British Columbia reported a larger volume of employment. Reductions in employment were anticipated in all provinces for the following week.

The only important increases in the number of persons employed as compared with the week of November 27 occurred in logging, leather products and retail trade. In logging and retail trade the increases, which were seasonal in character, occurred in nearly every province, while in leather products expansion was reported in Quebec.

The most pronounced shrinkages in payroll were registered by firms in lumber and its products, iron and steel, textiles and railway construction. In railway construction alone 2,325 persons were released during the week. This decline and the falling off in lumber and its products were of a seasonal nature and were general throughout the country. In iron and steel products the reductions were also general, occurring largely in the manufacture of vehicles. In textiles the greater part of the losses continued to be reported in garments and threads, yarn and cloth, in the provinces of Ontario and Quebec.

*In 1920—*  
**THE CANADA LIFE**  
**ASSURANCE COMPANY**

(Established in 1847)

**Made the Following Substantial PROGRESS :**

		Increase
Total Assurance in Force increased to.....	\$276,667,000	\$46,873,000
Total Assets increased to.....	76,108,000	6,756,000
Reserves for Protection of Policyholders.....	63,665,000	5,598,000
Total Income in 1920.....	15,729,000	3,717,000
New Assurances issued in 1920.....	63,525,000	17,144,000
New Assurances paid for in 1920.....	58,260,000	16,619,000
Surplus Earned in 1920.....	2,163,000	285,000
Dividends to Policyholders in 1920.....	2,723,000	1,560,000
Total Payments to Policyholders in 1920.....	8,255,000	1,907,000

**Above,** *in brief, are the results for 1920 as shown by the Financial Statement.*

**Below** *are a few other important accomplishments during the year.*

1. Maintained dividends to Policyholders at pre-war scale, notwithstanding increasing costs and some adverse conditions.
2. Improved its service to the public through special training of Representatives and careful selection of men.
3. Won unstinted praise from the Government Insurance Departments of Michigan, Illinois, Pennsylvania and Minnesota after most thorough examination of Assets and Management.
4. Made the largest Surplus Earnings in the history of the Company.
5. Increased the average interest to 6.10%.
6. Placed more insurance with present Policyholders than in any other year and increased public interest in Monthly Income, Business Insurance and Group Policies for industrial workers.

## DIRECTORS' REPORT

To the Shareholders:—

Your Directors have much pleasure in presenting herewith the Twenty-third Annual Report covering the year ending December 31st, 1920, together with the usual Cash Statement and Balance Sheet of Assets and Liabilities, duly certified to by the Auditors and passed upon for publication by the Superintendent of Insurance for Ontario. You will be profoundly delighted to note therefrom that the operations of your company during the past year were attended with abundant success, and that the growth and prosperity as indicated in every department is greater than ever reported to you before.

The Premium Income, Interest Receipts, Building Rentals, Commissions on Re-Insurance, Re-Insurance Claims and Endorsement Fees were, respectively, \$654,707.12, \$30,021.83, \$5,900, \$1,735.15, \$315.90 and \$226.92, making a total Income of \$692,897.28.

The Net Profit on the year's operations was \$200,194.34. A dividend of ten per cent. (10%) on the paid-in Capital Stock of the Company was declared therefrom, and the balance carried to the credit of Profit and Loss Account.

The amount at risk now stands at \$91,687,563.00. The number of policies in force is 67,928, an increase of 10,960. The average risk per policy is \$1,349.77. Of the foregoing amount at risk, 75.36% is made up of three-year business, and 24.64 annual business.

The Expense Ratio for 1920 was 34.72%. The Fire Loss Ratio was 32.10% and the Net Profit 33.18% of the Net Premium Income.

The Special Fund deposited with the Ontario Insurance Department now stands at \$116,568.68, and is the largest made by any Canadian Fire Insurance Company. Furthermore, it is greatly in excess of the statutory requirements, the amount having been voluntarily increased from time to time by the Directors of your Company.

Your Directors commenced the year of 1920 with a determination to secure a premium income of Six Hundred Thousand Dollars, and to make new records in the net results. A perusal of this statement will show that their anticipations have been more than realized, and that they are presenting you with report indicating the greatest growth and prosperity ever enjoyed by this Company. The Premium Income secured, will place the Company in the enviable position as having the largest premium income of all the companies operating in this Province, and at the same time, securing the same at a very low expense ratio. The Fire Losses sustained during the year showed practically the same ratio to premiums as in 1919, the actual amount showing a very slight increase. Altogether, the affairs of your Company are in a sound and healthy condition, and the Shareholders are to be congratulated upon the efficiency of the present management. The Books, Vouchers and Securities are continuously checked and audited during the entire year, and there is not a doubtful asset of any kind on the Books.

The thanks of the Shareholders are due to the splendid agency staff of this Company, who have worked unceasingly and untiringly in the effort to bring the "Merchants" into the

proud position of the leading Ontario Company. Composed of loyal, dependable and careful men, with the interests of the "Merchants" seemingly always paramount in their minds, the agency staff met every appeal made to them during the year with generosity and promptness, and have enabled your Directors to present this splendid statement. The agency staff of the Merchants Fire Insurance Company is now composed of approximately eleven hundred men, and which in numbers, efficiency and capacity for results, is not excelled or even equalled by any other agency organization.

We are commencing the New Year with confidence and the usual determination to again exceed all past records. The Premium Income for 1921 has been set at One Million Dollars, and you may rest assured that this task, the greatest we have ever set ourselves to, will be tackled with the one idea of success. The insuring public have great confidence in your Company, and this coupled with the splendid organization possessed by the "Merchants," will again produce results that will continue the growth and prosperity of your Company.

All of which is respectfully submitted.

JOHN HENRY COLLIER DURHAM,  
*Vice-President & General Manager.*

## NOTICE

LAKE SUPERIOR PAPER COMPANY, LIMITED

Incorporated under the laws of the Dominion of Canada

To the Holders of Six Per Cent First Mortgage 30-Year Gold  
Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 5 of a Supplemental Mortgage dated the 20th of January, 1915, made between Lake Superior Paper Company, Limited, and The Royal Trust Company, the holders of the various bonds mentioned in said clause, including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 5 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and/or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1¾% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage 30-Year Gold Bonds their proportion of said Preference Shares under said Clause 5, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to The Royal Trust Company, 59 Yonge Street, Toronto; or The Royal Trust Company, Montreal, Quebec; or Agents of the Bank of Montreal, 64 Wall Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or The Bank of Montreal, 47 Threadneedle Street, London, E.C., England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

THE ROYAL TRUST COMPANY,

Trustee.

**NEW HAZARDS TO PLATE GLASS**

**Automobiles and Explosions are Important Factors—Recent Increase in Rates Should Improve Companies' Position**

By JOHN GOOD

Secretary, Guardian Insurance Co. of Canada

THE year 1920 proved a very trying period for glass insurance underwriters, and while the reports of the different companies have yet to be published, it is practically certain that the business for the twelve months will show an underwriting loss, this notwithstanding the fact that quite substantial increases in rates were made in July throughout the Dominion; but the full benefit of the higher premiums will only be felt during the current year, owing to the fact that the bulk of the glass insurance is usually written in the first six months of the year.

The cost of replacing glass was inclined to mount still higher, but fortunately towards the end of the year prices began to exhibit a tendency to drop slightly, although the glass supply houses could give no assurance that the lower prices would be maintained. Still it is felt that prices must show some improvement from now on, as manufacturers of glass in England and Belgium have made a surprisingly good recovery from the effects of the war and a considerable quantity of glass is now being exported to this and other countries.

**Five Troublesome Years**

The five years 1916-1920 provided underwriters with an abundance of troubles and anxieties, but the close of the past year showed some hope for better times for glass insurance companies, which they sorely need. The year was somewhat distinguished by the action of one of the prominent companies with a large glass premium income cancelling many thousands of dollars in premiums on account of the heavy losses during the past few years. The company in question have been

transacting glass insurance business in Canada for a number of years, and possessing as they do among their officials some of the shrewdest glass underwriters, it must be appreciated that their unsatisfactory results were not due to want of care or experience.

A comparatively new line of business is now available for glass insurance companies, viz., the covering of glass of automobiles. Certain companies in Montreal are issuing such policies for which at present there is only a fair demand, but which will undoubtedly be increased when this form of glass insurance, which is of recent origin, becomes better known to car-owners. All policies of this kind issued in the Province of Quebec are subject to a minimum annual premium of \$5.00.

**Automobiles a New Hazard**

An increasing hazard which companies now have to contend with is due to the larger number of automobiles in use. Numerous breakages are caused by stones and other small objects being cast up by the wheels of passing cars. Losses sustained in this manner are occurring with greater frequency year by year, and it is practically impossible for the companies interested to secure recovery from the car-owners. It may not cause great surprise to the public to make known the regrettable fact that while some hundreds of windows have been smashed by stones shot up by the tires of automobiles, there are only very rare instances where the owner of the machine has made good the damage.

Breakages by the settling of buildings have naturally shown a decrease owing to the lack of building operations, but with the resumption of construction work the companies will again be faced with heavy losses from this cause.

It will thus be seen that even when other conditions connected with glass insurance become more normal underwriters will be compelled to seriously consider the several extra hazards which may be said to have only become important factors within recent years, but which are, nevertheless, bound to affect the loss ratios in the future.

would be  
**SIMPLIFIED**

by the use of the "Half Minute Table." By it the fractional percentages from 1/64th to 15/16ths can be found rapidly and accurately

Owing to the widely varying fluctuations in New York Exchange percentages in sixteenths and thirty-seconds must frequently be calculated by tellers and accountants and these calculations must necessarily be checked. To do this by ordinary multiplication and division means considerable time in the course of the ordinary day's business. Speed and accuracy are essential in calculations of this nature and these are ensured by means of the "Half Minute Table." It is printed on a stiff card 9 1/2 x 14 inches and in a form convenient for hanging on the desk or the wall of the teller's cage for ready reference.

The following table of 13/16 per cent. with the directions for use will illustrate the method.

13-16							DIRECTIONS.			
	A	B	C	D	E	F				
1	8	1	2	5	0		By these tables the percentages from 1/64 to 1 per cent. on any amount up to \$900,000 can be readily found. The percentage at the required rate will be given in cents in the table according to the number of figures in the amount on which the percentage is desired. If the amount is four figures, as for instance \$7428, use the table as far as the D column, if five figures as far as the E column, if six figures F column. The procedure is as follows: Find 13-16 on \$76,450			
2	1	6	2	5	0	0	13-16 on 70,000 5 figures, E column 7th row—568.75			
3	2	4	3	7	5	0	6,000 4 " D " 6th " — 48.75			
4	3	2	5	0	0	0	400 3 " C " 4th " — 3.25			
5	4	0	6	2	5	0	50 2 " B " 5th " — .40			
6	4	8	7	5	0	0	Answer . . . . . 621.15			
7	5	6	8	7	5	0	To find 27.32 on above amount will require two calculations—13-16 and 1-32.			
8	6	5	0	0	0	0				
9	7	3	1	2	5	0

The price, postage paid, is 3 for One Dollar.

Single Copies 35 Cents.

# THE BANK OF TORONTO

## Report of the Sixty-Fifth Annual General Meeting

The Sixty-fifth Annual General Meeting of the Bank of Toronto was held at the Head Office in Toronto on Wednesday 12th January, 1921.

On motion the Chair was taken by the President, Mr. W. G. Gooderham, the Assistant General Manager, Mr. John R. Lamb was requested to act as Secretary, and Mr. George R. Hargraft and Major A. E. Duncanson were appointed Secretaries.

The Secretary read the Annual Report, as follows:—

The Directors of The Bank of Toronto beg to present their Report for the year ending 30th November, 1920, accompanied by the Statement of the Bank's affairs and the results of the operations for the year.

### PROFIT AND LOSS ACCOUNT.

The Balance at credit of Profit and Loss, on November 29th, 1919, was .....	\$ 793,983.03
The Net Profits for the year, after making full provision for all bad and doubtful debts, and deducting expenses, interest accrued on deposits and rebate on current discounts, amounted to the sum of .....	1,017,371.24
	<u>\$1,811,354.27</u>

This sum has been appropriated as follows:—

Dividends Nos. 154 to 157 at twelve per cent. per annum .....	\$ 600,000.00
Reserved for Taxes .....	\$100,000.00
Transferred to Officers' Pension Fund .....	25,000.00
Written off Bank Premises .....	100,000.00
	225,000.00
Carried forward to next year .....	986,354.27
	<u>\$1,811,354.27</u>

There has been a constant demand for credit during the year, and the available funds of the Bank have been actively employed with satisfactory results.

The Head Office and Branches have been regularly inspected by the Inspection Staff, and at the Head Office the usual inspection of cash and securities has also been made.

Mr. G. T. Clarkson, C.A., the Auditor appointed by the Shareholders of the Bank, has made his examination of our principal offices and his report is appended to the General Statement presented herewith. Mr. Clarkson's name will be submitted to you for reappointment as Auditor.

Eight new Branches of the Bank have been opened during the year, and three Branches closed, making 161 Branches now in operation.

A Resolution will be submitted to you by the Directors at the Annual Meeting requesting your authority to increase the number of Directors on the Board.

All of which is respectfully submitted.

W. G. GOODERHAM,  
President.

### GENERAL STATEMENT

30th November, 1920.

Toronto, 30th November, 1920.		

#### AUDITOR'S REPORT TO THE SHAREHOLDERS.

To the Shareholders of the Bank of Toronto:—

I have compared the above Balance Sheet with the books and accounts at the chief office of the Bank of Toronto, and certified returns received from its branches, and after checking the cash and verifying the securities at the chief office and certain of the principal branches on November 30th, 1920, I certify that in my opinion such Balance Sheet exhibits a true and correct view of the state of the bank's affairs according to the best of my information, the explanations given to me, and as shown by the books of the bank.

In addition to the examination mentioned, the cash and securities at the chief office and certain of the principal branches were checked and verified by me during the year, and found to be in accord with the books of the bank.

All information and explanations required have been given to me, and all transactions of the bank which have come under my notice have, in my opinion, been within the powers of the bank.

G. T. CLARKSON,

Toronto, December 18th, 1920. Chartered Accountant.

The Meeting was addressed by the President, Vice-President and General Manager.

The report of the Directors was adopted. By-law No. 30, increasing the number of Directors to fourteen, was passed, and Mr. G. T. Clarkson, C.A., was reappointed as Auditor.

The thanks of the Stockholders was extended to the President, Vice-President and Directors, also to the General Manager and other officers for their services during the past year.

The following Directors were elected: W. G. Gooderham, William Stone, John Macdonald, Lt.-Col. A. E. Gooderham, Joseph Henderson, Brig-Gen. F. S. Meighen, J. L. Englehart, William I. Gear, Paul J. Myler, A. H. Campbell, William R. Bawlf, John I. McFarland and James D. Chaplin, M.P.

At a subsequent meeting of the Board Mr. W. G. Gooderham was re-elected President and Mr. Joseph Henderson Vice-President. 356

#### SCOTTISH CANADIAN ASSURANCE OBTAINS LICENSE

Will Write Fire and Hail Business in Canada—Eagle, Star and British Dominions Investigating Rainfall Records Here—Retail Merchants Mutual Fire Risks

LICENSE has been issued by the Dominion government to the Scottish Canadian Assurance Company, authorizing the company to transact in Canada the business of fire and hail insurance. The head office of the company is to be situated in Toronto, and T. H. Hall has been appointed chief agent.

The Scottish Canadian Assurance Corporation was incorporated at the last session of parliament by special act, authorizing it to do business in fire, accident, sickness, automobile, burglary and hail insurance. The authorized capital is \$1,000,000. The following amounts must be paid up in order to do the respective classes of business: Fire, \$100,000; accident, \$40,000; sickness, \$10,000; automobile, \$20,000; burglary, \$20,000; hail, \$50,000. Seven hundred and fifty thousand dollars of the stock has already been subscribed, of which \$150,000, the amount required to do fire and hail business, has been paid up. The General Accident, Fire and Life Assurance Corporation, Ltd., of Perth, Scotland, which controls the General Accident of Canada, also controls the Scottish Canadian.

A general meeting of the shareholders was held on July 23 last, the following directors being elected: T. H. Hall, Toronto; F. Richardson, Philadelphia; W. A. Barrington, Toronto; J. F. Michie, Toronto; J. A. Macintosh, Toronto; G. W. Howland, Toronto; E. Hay, Toronto; J. F. Norie-Miller and S. Norie-Miller, both of Perth, Scotland.

During the next five years the company must increase its paid-up capital by \$15,000 per annum, making an addition of \$75,000 to capital and surplus. One hundred and ten thousand dollars of 1934 Victory bonds have been de-

posited with the Department of Insurance, and future investments will be mostly in provincial and municipal bonds. The company has already registered in Manitoba, Saskatchewan and Alberta, and expects to be shortly in Alberta.

The United States Fidelity and Guaranty Company has been authorized to transact forgery insurance here in addition to the other classes of business for which it is already licensed.

The Liverpool and London and Globe Insurance Company, Limited, with their affiliated companies, the Liverpool-Manitoba Assurance Company and the Globe Indemnity Company of Canada, on January 1 opened a branch, with headquarters in the Excelsior Life Building, Toronto, to which all the agents in Ontario west of the line of the Kingston and Pembroke Railway will report their business. The branch is in charge of J. D. Simpson, local manager. The reason for this departure is to afford western Ontario agents quicker service, and generally to facilitate the extensive operations of these three companies.

The general agency of the Fidelity-Phenix for Montreal, which was formerly held by Geo. W. Pacaud, has been terminated and the Montreal business is now carried on at the head office at 17 St. John Street, Montreal.

Robert Gambles, manager of the Pluvius department of the Eagle, Star and British Dominions Insurance Company, is in Canada investigating rainfall records, and it is expected that the company will shortly commence writing rain insurance here.

#### Retail Merchants Fire Risks

Arrangements have been completed and authorization granted by A. E. Fisher, Saskatchewan superintendent of insurance, by which the business of the Retail Merchants Mutual Fire Insurance Company, a company subsidiary to the Retail Merchants Association, is transferred to the Retail Merchants Underwriters Agency. The Retail Merchants Underwriters Agency came into being through an arrange-

ment by which the Northwestern Mutual Fire Association of Seattle, Washington, under whose guarantee the agency operates, agreed to co-operate with the various provincial boards of the Retail Merchants Association and handle members' risks exclusively.

"Already British Columbia, Alberta, Montana, New Brunswick and Saskatchewan have linked up with this insurance service for their members, and Ontario and Quebec have the step under consideration," stated F. E. Raymond, provincial secretary of the Retail Merchants Association, "and the hope is expressed that before long every merchant in the nine provinces of the Dominion will be able to link up in association membership through the saving in the cost of insurance which this service will give him.

"Previous to the formation of the Retail Merchants Underwriters Agency, Saskatchewan was the only province in which the retail merchants had organized a mutual insurance company. The old Saskatchewan company came into being in 1915, and has shown steady growth from year to year. It was necessary, however, to act conservatively in order to husband its resources, and in consequence policy-holders were restricted to \$2,000 of insurance in the smaller towns and \$4,000 in cities and towns under adequate fire protection. By virtue of our arrangement with the Retail Merchants Underwriters Agency, however, we will be able to satisfy our members to the limit, and the dividends by which they will benefit each year will amount to 35 per cent. on all premiums paid."

#### Sun Life Agreement

The Sun Life Assurance Company has completed an agreement with the United Grain Growers' Security Company, Ltd., by which the latter company's representatives will now act as agents for the insurance company.

Geo. Burdett, manager of the Continental Life Insurance Company for Manitoba, has been transferred to Toronto.

#### CANADA NORTH-WEST LAND COMPANY

The Canada North-West Land Co., Ltd., now in liquidation, announces a distribution on realization of assets of \$5 per share, payable February 14. Shareholders are reminded that as the distributions on realization of assets can only be made as, and when, sufficient funds are on hand from time to time, the payments are bound to be at irregular intervals and cannot be counted upon to be made at any fixed periods. The shareholders are further reminded that as each distribution on realization is made, the assets of the company are proportionately depleted, and that these payments are not and cannot in any way be regarded as dividends.

#### CROWN IS PRIOR CREDITOR

The Crown's right to priority of claim in the estate of an insolvent creditor is emphasized in a judgment handed down on January 8 by the Exchequer Court of Canada in which W. A. Cole, of Ottawa, assignee of Max Lithwick's insolvent estate, is ordered to pay \$760 income tax. Max Lithwick, the insolvent, failed to file an income tax statement in 1917, and, subsequently, became insolvent. Mr. Cole was appointed assignee in charge of the estate. He did not contest the amount claimed for income tax, but a controversy arose as to whether the amount claimed was to be paid in full priority to claims of all other creditors of like degree.

In giving judgment, Mr. Justice Audette states that the Supreme Court has ruled that the Crown, as a simple contract-creditor, for public moneys of the Dominion deposited with a provincial court, is entitled to priority over other creditors of equal degree. "Unless this priority to which the prerogative attaches in favor of the Crown has been taken away by competent statutory authority, I must find that it is still good law."

#### BUILDING PERMITS DOWN FORTY-FIVE PER CENT.

Decrease of Nearly Four and Half Millions in November as Compared with Previous Month

**B**UILDING permits issued in fifty-six cities showed a decrease during November, 1920, as compared with the preceding month, the total value of building permits falling from \$9,660,538 in October to \$5,289,321 in November, a decrease of \$4,371,217, or 45.3 per cent. Prince Edward Island and British Columbia were the only provinces to register increases in this comparison, while of the declines recorded in the remaining provinces, that of \$3,094,706, or 51 per cent., in Ontario, was the largest. As compared with the figures for the corresponding month in 1919, there was a decrease of \$2,443,942, or 31.6 per cent., the value for November, 1919, having been \$7,733,263. In this comparison all provinces showed declines.

# *TO-NIGHT*—if the FIRE FIEND VISITS YOUR PLANT

and leaves destruction in its wake, will it leave you badly crippled financially—or ruined—or will it find you safeguarded against even total destruction, and ready to repair its ravages with the least possible delay and with, at most, trivial loss?

FIRE INSURANCE is your only real safeguard. It behooves you, then, to consider very carefully whether or not you are protected for a sufficient amount. The strength and standing of the insurance company, and its reputation for prompt and liberal settlement of losses, will also receive the attention of the careful executive.

Since A.D. 1714 the Union Assurance Society has been insuring against fire. In its long history, conflagrations of every kind have been met and successfully withstood, and the Society to-day is in a stronger position to meet losses than ever before. During more than 200 years of service, the Society has maintained a reputation for strength and liberality of settlement that is unassailable.

**PUBLIC STOCK OFFERINGS REACH GOOD TOTAL**

**New Financing of Industrial and Other Companies Exceeds Fifty-Three Millions—Ten Millions of New Chartered Bank Stock**

**D**URING 1920 Canadian industrial and other companies made public offering of preferred shares to the extent of \$53,392,000. These shares were underwritten by reputable investment houses and retailed at attractive prices. In very few cases was the offering made below par, and the majority of the issues were made with a bonus of common stock.

In addition, six of the Canadian chartered banks placed on the market \$10,000,000 of new stock. Shareholders were given the preference in the sale of these shares, and the general public participated only to a very small extent. The offerings were attractive, being made considerably below market. Details are given below.

**Other Capitalization Changes**

Besides these preferred and bank stock offerings, there were some important changes in the capital of many other corporations, which are interesting to review.

The Dominion Steel Corporation issued \$5,902,000 additional common stock, while the Dominion Iron and Steel Co. also issued \$4,200,000 additional common stock. Laurentide, Ltd., issued \$28,800,000 new stock, allotted at the rate of three new for one old share, while National Breweries also issued new capital, giving four \$25 shares for one \$100

share. Riordon Pulp and Paper Co. issued \$1,500,000 common shares, which were allotted to shareholders at \$125. Spanish River Pulp and Paper Co. issued new preferred stock to wipe out arrears on old preferred. New shares were allotted to shareholders to the extent of 42 per cent., of the par value outstanding preferred stock, which was then \$5,699,100.

The Canadian General Electric Co. issued \$1,000,000 additional common stock, bringing the total capitalization of that company to \$8,000,000 common, paid up, and \$2,000,000 preferred.

A special dividend of 25 per cent., available to shareholders in the form of new stock at the rate of one new share for each four held, was declared by the Lake of the Woods Milling Co. As a result of this 7,000 shares of a par value of \$100 are now listed on the Toronto Stock Exchange.

Shareholders of the Wabasso Cotton Co. converted 17,500 shares of \$100 par value into 35,000 shares of no par value, holders of the old shares receiving two for one.

Under the new Riordon merger plans, shareholders of the Kipawa Co., Ltd., expanded their holdings of stock into new Riordon Co., Ltd., common shares, the basis of exchange being 1½ shares of new for one of old.

The bond issue of the St. Maurice Paper Co. was converted into common stock, bringing the common capitalization up to \$7,899,900. This amount is the sole outstanding liability to shareholders of the company.

The Dryden Pulp and Paper Co., Ltd., whose bonds are held by English interests, sold 100,000 shares of common stock (no par value) in Canada, at a price of \$35 per share.

Capitalization of the Brompton Pulp and Paper Co. was increased from 70,000 shares of a par value of \$100 each to 210,000 shares of no par value. Shareholders received two new shares for one of old, and the remaining 70,000 is kept in the treasury.

**Price Brothers and Howard Smith**

Howard Smith Paper Mills, Ltd., issued \$1,000,000 new common stock. Shares were available to shareholders of record November 5 last, and right to subscribe expired on November 15. Terms of subscription were as follows: Ten per cent. on subscription or before November 15; 15 per cent. on or before December 15; 15 per cent. on or before January 15, 1921; 15 per cent. on or before February 15, 1921; 15 per cent. on or before March 15, 1921; 15 per cent. on or before April 15, 1921; and 15 per cent. on or before May 15, 1921.

Shareholders of Price Bros., Ltd., transferred the extensive business and holdings of the company to a new concern with the same name in consideration of 426,710 shares of the new enterprise's common stock, and the assumption by the new concern of bonded debt and other obligations. Holders of the former stock received five shares of the new security for each one of old. New shares were of \$100 par value.

Before the reorganization of the company earlier in the year a stock dividend of 22 per cent. was declared, increasing the capital from \$5,000,000 to \$8,540,000.

The Abitibi Power and Paper Company recalled its \$5,000,000 share capital, issued on the basis of \$100 par value, and reissued it in the form of 250,000 shares of no par value, or five new shares for each one of the original issue.

The Provincial Paper Mills, Limited, was reorganized to take over the Provincial Paper Mills, Ltd., and the Port Arthur Paper Company, its outstanding capital being increased to \$1,700,000 preferred and \$3,500,000 common shares on the basis of three shares of new stock for one of old.

The Wayagamack Pulp and Paper Co., Ltd., increased its outstanding 50,000 shares of \$100 par value to 250,000 shares of no par value, giving to each shareholder two shares of new for one share of old, and offered 50,000 shares ratably to shareholders, retaining 100,000 additional shares in the treasury for possible future needs.

The Premium on New York Funds.

The above Chart prepared by the Alberta Treasury Department from figures supplied by the Canadian Bank of Commerce and the Union Bank of Canada, illustrates the remarkable upward movement which has characterized the exchange situation since war ended.

HEAD OFFICE, WINNIPEG                      AGENTS EVERYWHERE

Kaministiquia Power Co. declared a stock dividend of 13½ per cent. in common stock. As the paid-up capital of the company in common stock amounts to \$2,198,018, the amount distributed would be equal to \$296,732, or little more than \$5,000 short of the full authorized amount of capital at \$2,500,000.

Canadian Car and Foundry Co., Ltd., liquidated the 22½ per cent. dividend arrears on the cumulative preferred stock of the enterprise through the issue of 6 per cent. negotiable script maturing in seven years. The total paid-up preferred capital is \$7,500,000.

The New Brunswick Telephone Co. increased its capital stock by \$400,000, the money being needed for the reimbursement by the company for money borrowed for plant extension. The new shares, which are of \$10 par value, were offered at 110 and accrued dividends, to yield 7.27 per cent., by the Eastern Securities Co., Ltd., and J. M. Robinson and Sons.

Alberta Four Mills, Ltd., offered balance of \$1,400,000 stock at \$100 per share, fully paid and non-assessable. There was no bonus or promotion stock.

#### GUARANTY TRUST COMPANY OF NEW YORK

The statement of condition issued by the Guaranty Trust Company of New York as of December 31st last shows that during the year 1920 the company's profits were \$12,355,950. This amount, added to a credit balance of \$6,239,889 on January 1, 1920, and to miscellaneous credits of \$155,624 during the year, brings the total credits in the undivided profits account up to \$18,751,464. The deductions from this amount

were \$5,000,000 to cover the 20 per cent. dividend paid during the year and \$1,676,392 which was appropriated for distribution to officers and employees under the company's additional compensation plan. With these deductions, totaling \$6,676,392, the company's final credit balance in undivided profits account is \$12,075,072. The statement also shows an increase of some \$22,000,000 in deposits since November 15, the date of last previous statement. Total resources now stand at \$923,663,338.

### NOTICE OF ASSIGNMENT

New Brunswick Supreme Court Lays Down Rule as to What Constitutes Notice of Assignment of Claim to Bank

NOTICE of assignment sent to the solicitor of a company is notice to the company, according to the decision of the New Brunswick Supreme Court in the case of Bank of Nova Scotia v. St. John and Quebec Railway. The material facts of the case were as follows:—

On May 8, 1912, the Hibbard Company, Limited, entered into a contract with the St. John and Quebec Railway Company for the construction of a line of railway between Fredericton and Woodstock on the western side of the River St. John. In the latter part of August, 1914, the company was unable to pay the July estimates and no funds were forthcoming to meet the contractor's obligations. The Hon. George J. Clarke, premier of the province, then went to Montreal and negotiated with the Hibbard Company to continue the work of construction. He represented that the province would hand over to the contractors bonds of the province or bonds of the railway company guaranteed by the province, bearing interest at the rate of  $4\frac{1}{2}$  per cent., less a certain drawback of 10 per cent. to be paid over when the work was completed, on the understanding that all estimates were to be approved by the provincial engineer.

#### Bank Financed Work

In the course of the negotiations it was pointed out to Mr. Clarke that such arrangements would be impossible unless the company was able to finance upon the security of the bonds, and Mr. Clarke consequently gave a letter to the Bank of British North America setting forth what the province would undertake to do, and the Bank of British North America consented to supply the Hibbard Company with the necessary funds from month to month to carry on its work. The work on the railway went on until it was completed in October, 1914, all payments that were made being made to the bank in bonds of the railway company guaranteed by the province. On January 16, 1916, the Hibbard Company gave an absolute power of attorney to a Mr. Gall to act for it in making a full and final settlement with the railway company, and a few days later Mr. Gall came to a settlement with the company, conceding payment of liabilities that the company had previously repudiated, and diverting a considerable amount of money, over \$17,000, to the Imperial Bank upon his own account, leaving a balance of a little less than \$5,000 payable to the Hibbard Company, and for which amount the railway's cheque was given.

The contention of the bank was that the government and the railway company remained liable to the bank for the balance of the advances made to secure the work, amounting to a sum of \$32,899, with interest; that of this amount there had only been paid the sum of \$4,902, the balance arrived at in the settlement by Mr. Gall with the railway company in January, 1916.

#### Court's Judgment

Hazen, C.J., in his written judgment, says: "Chandler, J., having stated in his judgment as above that he considered that the assignment of the amount due to the Hibbard Company under their contract with the railway company to the Bank of British North America was a good and valid assignment, held that the St. John and Quebec Railway Company had notice of the assignment of the claim of the Hibbard Company to the Bank of British North America, and that such notice was given by the resolution passed by the Hibbard Company authorizing A. D. Gall to settle with the railway company and the government of New Brunswick.

"In my opinion, therefore, the appeal should be dismissed with costs, and, in compliance with the judgment of Chandler, J., the matter should be referred to a Master of the Supreme Court to take an account of the amount due by the Hibbard Company to the Bank of British North America for loans and advances in connection with the contract between the Hibbard Company and the St. John and

Quebec Railway Company, dated May 8, 1912, and that an account should also be taken of the amount due from the St. John and Quebec Railway Company to the Hibbard Company under the contract above mentioned."

### BRITISH COLUMBIA FISHERIES DISPUTE

In the British Columbia Supreme Court, on December 7, the Banfield Fisheries, Ltd., made application for an injunction against certain Japanese fishermen to restrain the latter from selling fish already packed at Banfield without first protecting the company, at the rate of \$6 per ton of herring, in accordance with a contract existing between the company and the Japanese. R. C. Lowe, on behalf of the fishermen, opposed the application on the grounds that the company had not produced in court sufficient material to justify the learned judge in granting it. Counsel, however, was willing to give an undertaking in the name of his clients satisfactory to the company, and on this understanding the application was adjourned.

### JUDGMENT REGARDING SALE OF SHARES

The Privy Council has dismissed with costs the appeal of Rountree vs. J. L. Wood, of Ontario. The case was a claim for the price of shares alleged to have been contracted for purchase by the respondents from the appellants.

This was a suit brought by Meredith Rountree, of Montreal, against L. M. Wood, of Toronto, for \$15,900, which was the value plaintiff placed on shares granted him for underwriting shares in the Royal Bank building at Toronto, in addition to a cash commission paid him. This was in 1913. Rountree brought suit some time later to compel Wood to buy these shares from him. There had been an agreement to that effect, which was to expire at a certain date, but the Court below held that there was a continuing agreement and gave judgment in favor of the plaintiff for \$13,000. This stage of the case was reached in 1918. The Supreme Court of Ontario unanimously reversed this judgment, with costs.

This decision was then appealed direct to the Privy Council, who discussed the appeal and sustained the judgment of the Ontario full Bench without calling upon the respondent.

### GRAND TRUNK CLAIM AGAINST U. S. GOVERNMENT

Arguments in mandamus proceedings brought by the Grand Trunk Railroad against Secretary of the Treasury Houston were listed for hearing on December 16, in the district of Columbia Supreme Court. The secretary has been notified to show cause why he should not pay the Grand Trunk roads, operating in the United States, \$500,000 under the guarantee provision of the Transportation Act, giving the carriers a 6 per cent. return up to September 1.

On the decision in this case, which has grown out of a recent decision of Comptroller of the Treasury Warwick, that further payments to the railroads under the guarantee provision of the act must be withheld until complete statements are submitted by the roads of amounts due them, depends the payment of more than \$400,000,000. The carriers claim this is the balance the government owes them for losses incurred during the guaranty period.

In the suit of John Beggs, Limited, Scotch distillers, brought against F. Edwards and Company, of Toronto, to recover \$7,806 due on certain bills of exchange, judgment for the amount sought has been allowed by Justice Latchford. A counter-claim of the defendants for \$44,649 for payments alleged to have been made, or for \$40,000 damages for alleged breach of contract, was dismissed by the judge.

**Port Arthur to Participate Largely in the Pulp and Paper Trade During the Coming Year—Wayagamack Plant Closed Down to Effect Repairs and Readjustments—Steel Expert Anticipates Big Demand for Rails Will Keep Steel Plants Busy—Textile Outlook Good, States Authority**

**I**NDUSTRIAL announcements made during the first two weeks of 1921 would seem to indicate a more promising situation. Many plants which found it necessary to close down in December have reopened. Some companies have closed their factories, but in a good many cases such action was taken to effect new changes and to bring about lower wage scales.

In the pulp and paper field several interesting reports have been issued. Port Arthur, Ont., it seems, will participate largely in the development of this industry during the coming year. The Provincial Paper Mills, Ltd., announces that, having secured a pulpwood limit of 1,220 square miles, well timbered, in the Nipigon District, it will go ahead at once with the construction of a paper mill and an addition to its pulp mill, which has now a capacity of fifty tons per day. Finances for the new undertaking have been arranged by the authorization of an issue of three million dollars of bonds, which, it is understood, is about the amount of expenditure the construction will entail. Almost simultaneously John Stirrett and Sons, who procured the big plant of the Port Arthur Wagon Co., announce that Chicago capitalists have financed a pulp mill of one hundred tons per day capacity, and that establishment of this industry will be commenced without delay. The Kaministiquia Pulp and Paper Co. is issuing bonds to finance an increase in the capacity of its plant from twenty-five to one hundred tons per day. These three industries will make Port Arthur one of the most important pulp and paper centres in the Dominion.

The Wayagamack Pulp and Paper Co. has closed down its plant at Three Rivers, Que., for a short period, in order to effect repairs and to install new machinery.

The pulp mill of the Bathurst Lumber Co., Bathurst, N.B., has shut down for an indefinite time, and many are out of employment, although some of those laid off have gone to the woods and others into the fishing industry. The reason given for the shutdown is the lack of demand for the output of the mills, a condition due to slack business in various parts of the continent.

Business at the Chaudiere Paper Mills, Hull, Que., has been resumed. The river level has risen considerably, and this fact has resulted in the reopening of the paper, pulp and sulphite mills. It is estimated that 500 men have gone back to work during the past two weeks.

Nels Wilkander, of Stockholm, Sweden, was in British Columbia recently studying pulp conditions. Mr. Wilkander, who has been superintendent of the large pulp plant of the Obruken Co. at Skellafta, Sweden, for some years, and also has been engaged in the lumber trade in his own country, speaks favorably of the situation in Europe. He states that, since the end of the war, the pulp trade in Northern Europe has improved greatly. During the war conditions were serious, but to-day the demand is increasing and prices are high. Wages in Sweden also are very high, a laborer in the woods receiving as much as twenty crowns (\$4) a day, which in Europe is a high wage.

## Iron, Steel and Coal

Opinion was expressed in Sydney, N.S., recently by an expert in the steel trade that following the stabilization of wages and prices, orders for rails will be issued in Canada that will tax the Dominion iron and steel plants to capacity. Virtually no rails have been manufactured in Canada for six years. The railway mileage in the Dominion is not far short of 40,000 miles. As the life of a rail is about ten

years, on a reasonable estimate there should be a replacement of one-tenth of the total mileage per annum. This means that in normal times to supply wastage 400,000 tons of rails should be furnished each year. At the present time there is an arrearage to overtake of more than two million tons, in addition to the 400,000 tons per year, ordinary wear and tear.

Steel ship building on the British Columbia coast shows a larger deadweight tonnage of production for 1920 than for the preceding year. In 1919, steel vessels reached 70,200 dead-weight tonnage, while in 1920 the output of British Columbia coast yards was 83,000 steel tons. Included in this year's construction are five freighters for the Canadian Government Merchant Marine, Ltd. Twelve vessels were launched.

The coal trade in Nova Scotia is not running quite at normal, and there is some trouble regarding the wages of miners. The depression in the coal trade has affected the smaller operators to a greater extent than the larger companies, and in order to work their collieries the smaller companies must ask a reduction in wages or close down the mines until the coal trade again resumes its normal briskness.

Notices indicating a 20 per cent. reduction in all wages, effective on and after January 17, were posted at the Dominion Steel Co.'s plant at Sydney, N.S., on January 8. This reduction applies only to the steel plant and does not affect the coal miners or those employed on the Louisburg Railway, also controlled by the corporation.

## Textile Outlook Good

In the words of an authority, the outlook for the textile industry is good. A. O. Dawson, managing director of the Canadian Cottons, Ltd., has expressed the opinion that there will be steady improvement from now on. He points out that whereas a large number of American mills have had to close down altogether, Canadian Cottons had been able to run on with only a slight curtailment in some of their mills.

During the past two weeks a number of plants, which closed down previous to the Christmas holidays, reopened again. The Atlantic Sugar Refineries at St. John, N.B., commenced operations, with men working on a lower wage scale.

The Perth Shoe Co., of Perth, Ont., will open on January 17, indicating a revival in the boot and shoe trade.

At Lauzon, Que., the Davis Shipyard resumed operations, and on January 10, two hundred men were given jobs. It is expected that gradually full operations will be resumed.

At Stratford, Ont., the employment situation has become brighter, with three factories reopening after a shutdown of some weeks. The factories are: The McLagan Furniture Co., the Stratford Chair Co., and the Globe-Wernicker Co.

Most of the industries of Kitchener, Ont., which closed down previous to the Christmas holidays, have resumed operations again.

The Maritime Nail Works, St. John, N.B., has closed down its plant, and will open again as soon as the men are ready to accept lower wages.

The Billings and Spencer foundry of Welland, Ont., has terminated operations temporarily for a readjustment of business.

The National Fibre Products Co., Ltd., has just purchased a plant in the town of St. Romuald, Que., and plans

to begin operations about the middle of February. Fifty men will be given employment at the outset, but it is expected that by the month of May next 150 men will be required to operate the plant.

The Milton worsted yarn spinning mills, the new industry owned by the Bob Long Co., of Toronto, which has been installing \$10,000 worth of new machinery in its factory at Milton, Ont., formerly owned by the L. Syer Carpet Co., is now ready to begin operations.

Arrangements are under way to enlarge the plant of the Tuttle-Bailey Manufacturing Co., Bridgeburg, Ont. The company manufactures registers here. Its headquarters are located in New York City.

The Bedford, Que., branch of the Torrington Needle Co. has made a cut of twenty per cent. in salaries and wages of employees, effective at once. The factory is still running full time.

A cable from London, England, announces the incorporation of Shawinigan, Ltd., a new organization for the development of Canadian export trade. The corporation, which is financed by Montreal and English interests, includes many financiers in both countries. It will deal in the products of the great electro-chemical centre, Shawinigan Falls, Quebec, having the sole right to sell these in the United Kingdom and Europe.

#### NEW INCORPORATIONS

Harrison Lumber and Pulp Co., Ltd., \$15,000,000—L. H. Timmins, Inc., \$5,000,000—N. A. Timmins, Inc., \$5,000,000—Pembroke Lumber Co., Ltd., \$2,000,000

P. Kirkpatrick Co. (Insurance), Ltd., Saskatoon, \$20,000; Agler Body Co., Ltd., Prince Albert, \$20,000.

#### WOODSTOCK PLANS NEW TRADE ORGANIZATION

Woodstock, Ont., may have a chamber of commerce to take the place of the present board of trade. Major Carson, of the Canadian City Bureau, Toronto, has interested members of the board of trade and city council, and already a committee has been appointed to investigate the details of the proposal. The plan as outlined would increase the membership fee from \$5 to \$25 and the members would be signed up on a three-years' contract. This would place the chamber on such a financial basis that a paid secretary with an up-town office could be maintained.

## Insuring the Motive Power

The object of Business Insurance is to insure the "brains" of an organization. Knowledge, combined with administrative ability, is invaluable. Every business, large or small, depends primarily upon one or more experienced leaders. The death of any one of them would result in a heavy financial loss. There would be heavy going until the deceased official was replaced by someone of equal ability. The possession of a policy of insurance payable to the firm in the event of the death of such a leader is essential. Joint policies payable on the death of the first partner, or (preferably) separate policies on the lives of the individual partners in favor of the survivors are issued by The Mutual Life of Canada. It will be the object of the Company to adapt each Business Policy to the particular requirements of the insuring firm. Consult our representative. He will be glad to advise you regarding business insurance.

# News of Municipal Finance

**Metropolitan Commission of Montreal Has Wide Powers—Winnipeg and Water District Have Large Amount of Refunding to do During Next Six Years—Sandwich Has Deficit in 1920—Walkerville Assessment Increased—South Vancouver Debt Greatly Reduced**

**South Vancouver, B.C.**—During the eleven months ended November 30, 1920, the debt of the municipality was reduced \$407,002. Of this substantial reduction \$170,213 was made possible through current receipts since December 31, 1919.

**St. Catharines, Ont.**—The 1920 council closed the year with an overdraft of \$3,944, which is the smallest in recent years. The tentative budget for 1921 shows that the tax rate, because of the increased assessment, can be reduced from 38.2 to 35.2 mills.

**Pictou County, N.S.**—At a gathering of councillors at Stellarton recently, a resolution was passed, asking authority from the councillors of the various municipalities in the county to investigate the possibilities of introducing hydro-electric in the county.

**Cobalt, Ont.**—The financial statement of the town treasurer, which has just been issued, shows current liabilities of \$27,260, as against liquid assets of \$32,308, including an item of \$17,791 of uncollected taxes. Only one debenture issue of \$6,500 is shown as being outstanding.

**Walkerville, Ont.**—Property in the town for 1920 is assessed at \$8,701,580, according to the financial statement recently issued. This figure represents an increase over the previous year of \$2,147,496. The total assessed valuation is placed at \$9,395,821, but there are exemptions to the extent of \$694,241.

**Sandwich, Ont.**—The annual financial statement of the town for 1920 shows total assets of \$87,198, as against total liabilities of \$81,546. Arrears of taxes are shown at \$62,119, while liabilities to the bank amount to \$41,824. Expenditures during the year amounted to \$329,358, as against revenue of \$295,237.

**Victoria, B.C.**—During 1920, according to Ald. Sargent, chairman of the finance committee, in his statement, the sum of \$709,724 in matured bonds was paid off. Point Alice accident bonds to the amount of \$49,000, which would not have matured until 1925, were purchased, as well as \$5,000 in school loan bonds, maturing in 1943, so that a total of \$763,724 of city indebtedness was cancelled during the year. Against this, Victoria bonds totalling \$214,698 were issued, so that the net reduction for the year was \$549,026. Ald. Sargent points out that in the repurchase of \$54,000 in un-matured city bonds a substantial saving was made, the price paid ranging from 93 to 76½ cents on the dollar. The interest for the balance of the period will not have to be paid, as the bonds now being issued are of the serial variety.

**Toronto, Ont.**—Gross assessment for 1921, according to the annual report of Assessment Commissioner Forman, is given as \$703,646,395, an increase of \$62,092,239 over the revised figures of last year, or 9.69 per cent. The greatest increase was in income assessments, which advanced \$14,595,749, or 35.57 per cent. The assessment of the city has increased in the past twenty years at a rapid rate. In 1901 the total assessment was \$128,271,583, in 1911 it was \$306,751,673, and at present it is \$703,646,395. These figures reveal an increase of 499 per cent. in twenty years, and of about 130 per cent. within the last ten years. During the same period the population has increased from 199,043 in 1900 to 512,812, or an increase of 313,796 in the twenty-year period. Satisfactory as this appears on the surface, the fact remains the population has not kept pace with the marvellous increase in assessments. The total value of real property owned by the city, including that held by the Education Board, is \$50,108,661.

**Winnipeg, Man.**—The city of Winnipeg and the Greater Winnipeg Water district will be required to re-finance within the next six years \$17,000,000 of their bonded liabilities,

H. C. Thompson, city treasurer, announced at a dinner tendered by Mayor Parnell to council members, department heads and newspapermen last week. The city pays \$3,000,000 a year for interest and sinking fund demands on its gross debt of \$43,500,000, while the Water District pays \$1,160,000 on its debt of \$16,200,000.

Against the city's liabilities, the sinking fund has assets of \$12,000,000, and last year rolled up a surplus of \$530,000, according to the information advanced. The fund trustees gradually are paying many old debts for which former councils made no provision, including \$120,000 on exhibition buildings that were torn down last year.

The gross per capita debt of Winnipeg is \$235 as compared with per capita debts ranging from \$200 to \$560 of other cities. The gross civic debt includes the capital liabilities of the self-supporting utilities. Mr. Thompson also announced that \$8,000,000 worth of bonds were sold last year at the best prices, thereby saving the city large sums of money.

**Montreal, Que.**—Although a separate measure from the city charter, the bill incorporating the Metropolitan Commission of the Island of Montreal is likely to be considered jointly with it, and may, perhaps, form the basis of a new system of government for Montreal. It provides for the system of financial control and of consolidation of funded indebtedness for the city and other municipalities of the island, and also for control regarding the planning and carrying out of general works. On the whole it contains fifty-five clauses, and is drafted on the procedure of the London Council.

The bill provides that the existing capital indebtedness of all municipalities within its jurisdiction shall be consolidated and the administration thereof transferred to the commission on a fixed date. The commission shall have the power to regulate and control all plants or proposals for the opening and constructing of all highways, roads, streets and drains affecting more than one municipality and shall see to it where necessary the roads and drains of contiguous municipalities properly connect with each other. It shall also control and regulate all public works and improvements affecting more than one municipality, and shall cause a survey of the island to be made and a general plan prepared indicating the location, lines and direction along which any trunk highways shall be constructed as and when such highways may be required for future developments, and such plan shall be binding upon all municipal authorities and persons making sub-divisions of building lots on the island.

Provision is also made that no municipality on the island shall grant, extend or renew any public utility or other franchise or privilege without the approval of the commission, nor shall it grant any exemption from taxation without such approval. No annexation of one municipality or territory within the jurisdiction of the commission shall be binding or effective without the previous written approval of the commission, and such approval shall not be granted unless and until the by-law proposing such annexation has been approved by a majority both in number and value of the ratepayers of the territories concerned according to a vote taken by referendum.

The commission will have the power to raise loans and also issue Montreal Island District notes, in anticipation of the negotiation of permanent loans or taxes receivable but not yet paid, for not longer than twelve months, but these are renewable from time to time. Provision is made for the holding of a public inquiry into the necessity or desirability of any proposed works undertaken by a municipality, with an appeal to the lieutenant-governor in council.

# Government and Municipal Bond Market

Victory Loan Issues Move Upward—Municipal Prices Also Firmer—Good Demand for Securities as Evidenced by Keen Bidding—Alberta to Borrow Two Millions—Manitoba Bonds Sold Across the Line to Yield the Investor 7.40 Per Cent.—London Makes New Loan

THE change which has come over the government and municipal bond market during the past two weeks would seem to indicate that the upward movement is on the way. Prices of municipals have firmed considerably, and the keen bidding on several of the new issues brought out seems to be a fair illustration of the increased demand for such securities.

The best illustration of the trend of the market is the movement of Victory bond prices. All government issues have moved upward, and are now at levels, which in the opinion of some circles are not in accordance with fundamental conditions. Sentiment is boosting the market a little higher than it really should go, and in view of this fact it is reasonable to expect some downward fluctuations before the market really stays up.

The following figures show the trend of Victory loan issue in recent weeks:—

	Control price.	Week ended Dec. 29, '20.		Two weeks end Jan. 12, '21.	
		High.	Low.	High.	Low.
1922	98	97½	96¼	98¼	97
1927	97	96	95	98	95½
1937	98	98½	97	99½	96½
1923	98	97	95¼	97½	95
1933	96½	95¼	94½	98½	95
1924	97	94½	93½	97¼	94¼
1934	93	92¾	92	96¼	92¾

## Irrigation Bonds Not Sold

There were no tenders for the \$5,400,000 7 per cent. 30-year bonds of the Lethbridge Northern Irrigation District, so that it looks as though further guarantees must be obtained from the province of Alberta, if the securities are to be disposed of and work on the district got under way. It is likely that the trustees of the district will now approach the provincial government and endeavor to secure the assistance necessary to enable the bonds to be disposed of.

The bonds which were offered carried a two-year interest guarantee of the provincial government. At the time the bill affording this guarantee was passed by the legislature, an effort was made to have the province guarantee the bonds fully as to principal and interest. Premier Stewart declined to go to such lengths with the first irrigation bond issue. He wanted to see what effect the two-year interest guarantee would have in making the bonds attractive to buyers. However, he stated in the house at the time that if the guarantee as given did not produce results in selling the securities, then the district was to come back to the legislature and ask further aid.

Premier Stewart, while still adverse to the commitment of the province to a financial responsibility such as that involved in the large scheme, admits that the government will have to face the question sooner or later, and he will not be surprised if it comes up at this next session. There is still an opportunity of securing financial co-operation from Ottawa, and the advocates of irrigation development are anxious that the provincial authorities make approaches in that direction.

## Money By-laws Passed or Defeated

The following money by-laws were passed by the rate-payers at the January elections:—

Municipality.	Amount.	Purpose.
St. Thomas, Ont. . . .	\$ 233,000	Concrete dam.
Brantford, Ont. . . .	299,000	School and waterworks.
Scarboro, Ont. . . .	25,000	Township cemetery.

Municipality.	Amount.	Purpose.
Mimico, Ont. . . . .	37,000	Public park and school site.
Hamilton, Ont. . . .	300,000	For nurses home.
London, Ont. . . . .	100,000	Hospitals.
Peterboro, Ont. . . .	350,000	Filtration plant.
Windsor, Ont. . . . .	225,000	Asphalt plant and police station.
Galt, Ont. . . . .	55,000	Hospital additions.
St. Catharines, Ont.	35,000	Cemetery annex.
Waterloo, Ont. . . .	9,500	Hospital.
Sarnia, Ont. . . . .	10,200	Sewers.

By-laws defeated at the January elections were:—

Fenelon Falls, Ont. \$	20,000	Fire truck.
Sarnia, Ont. . . . .	94,000	Waterworks.
Brantford, Ont. . . .	185,000	Collegiate. . . . .
Hamilton, Ont. . . .	7,314,000	Hospitals, roadway and municipal gas plant.
Kitchener, Ont. . . .	37,800	Power house.
London, Ont. . . . .	100,000	Motor bus system.
Guelph, Ont. . . . .	50,000	Improvements to park.

## Coming Offerings

The following is a list of debentures offered for sale, particulars of which have been given in this or previous issues:—

Borrower.	Amount.	Rate %.	Maturity.	Tenders close.
Kamsack, Sask. . . . \$	13,400	7	15-instal.	.....
Barton Tp., Ont. . . .	23,744	6	Various	Jan. 17
York Tp., Ont. . . . .	262,000	6	10 & 20-years	Jan. 17
Alberta Province . . .	2,000,000	6	10-years	Jan. 17
Kenogami, Que. . . . .	80,000	6	5-years	Jan. 25
Gladstone, Man. . . . .	11,000	6	20-years	Feb. 1
Regina P.S.D., Sask.	250,000	6½	30-years	Feb. 1

**Kamsack, Sask.**—The town is offering for sale \$13,400 7 per cent. 15-installment debentures. (See advertisement elsewhere in this issue).

**York Township, Ont.**—Tenders will be considered on January 17, 1921, for \$262,000 6 per cent. 10 and 20-year debentures. The proceeds of the issue will be used for waterworks and schools.

**Kenogami, Que.**—Tenders will be received until January 25, 1921, for the purchase of \$80,000 6 per cent. bonds dated December 1, 1920, and redeemable December 1, 1925. Securities are in denominations of \$100 and \$500. A. Roche, secretary-treasurer.

**Regina P.S.D., Sask.**—Tenders will be received until February 1, 1921, for the purchase of \$250,000 6½ per cent. 30-year debentures. Securities will be payable in Canada only, or in Canada and New York, at the option of the holder. (See advertisement elsewhere in this issue).

**Gladstone, Man.**—Tenders will be received up till February 1, 1921, for the purchase of \$11,000 6 per cent. 20-year debentures, dated January 1, 1921. Securities are in denominations of \$100, and the interest is guaranteed by the province of Manitoba.—S. Schooley, secretary-treasurer.

**Barton Township, Ont.**—Tenders will be opened on January 17, 1921, for the following 6 per cent. debentures:—\$6,185.99 20 years, for sidewalks; \$11,557.56 10-years, for roads; \$6,000 3-years, for road machinery. (See advertisement elsewhere in this issue).

**Alberta.**—The province is calling for tenders until January 17, 1921, for the purchase of \$2,000,000 6 per cent. 10-year gold bonds. Proceeds of the issue will be used for

general public purposes and for improvement of railways under the control of the province. The two million dollars will be divided evenly for these two purposes.

#### Debenture Notes

**Toronto, Ont.**—The city council has approved the application of the Board of Education for a debenture issue of \$930,000.

**Havelock, Ont.**—The village is offering \$28,890 6 per cent. serial debentures, maturing from 1921 to 1940, to local investors at par.

**Edmonds, B.C.**—Ratepayers will probably be asked to vote on a \$60,000 school by-law at the forthcoming municipal elections. If so, this will be the only money by-law to be sanctioned this year.

**Chatham, Ont.**—City Treasurer Cottier advises *The Monetary Times* that early in January the city will make an issue of \$80,000 6 per cent. 15-year waterworks extension debentures. The securities will be sold locally.

**London, Ont.**—At a meeting of the local housing commission, E. F. Denison, chairman, stated that he had completed necessary arrangements for a loan necessary for a \$500,000 building program for London in 1921.

**Fredericton, N.B.**—The city will ask authority from the legislature to issue \$50,000 bonds for the improvement of the Victoria hospital. York County will also be asked to provide \$25,000 towards the improvement of the hospital.

**Saskatchewan.**—The following is a list of authorizations granted by the Local Government Board from December 18 to 24, 1920:—

Rural Telephones.—8 per cent. 15-years annuity: Dalrymple, \$1,500; Cedoux, \$4,800; Renown, \$4,000; Lakeview, \$950; Surbutton, \$200.

#### Bond Sales

**New Westminster, B.C.**—In December the city sold \$23,000 6 per cent. technical school debentures, maturing January, 1939, to a local bond house at 86.75.

**Norfolk County, Ont.**—R. C. Matthews and Co. have purchased \$50,000 6 per cent. 15-instalment debentures at a price of 95.95, which is on about a 6.60 per cent. basis. The deal was negotiated privately.

**Manitoba.**—A. E. Ames and Company and the United Financial Corporation, Ltd., are offering in Canada \$1,250,000 6 per cent. six months treasury notes at par and interest. The securities are in denominations of \$5,000, \$10,000 and \$25,000, and mature July 15, 1921.

**London, Ont.**—A. E. Ames and Co. have purchased \$741,200 6 per cent. serial bonds. There are two issues, one of \$465,000 for local improvements, maturing from December 30, 1921 to 1930, and \$276,200 for schools, maturing from November 1, 1921 to 1950. The bonds are now being offered to yield 6.25 and 6.30 per cent.

**Etobicoke Township, Ont.**—Wood, Gundy and Co. have been awarded \$30,000 6 per cent. 20-instalment debentures at a price of 95.38, at which rate the township pays about 6.60 per cent. for its money. Tenders received were as follows: Wood, Gundy and Co., 95.38; W. L. McKinnon and Co., 95.27; C. H. Burgess and Co., 95.06; R. C. Matthews and Co., 95.06; Canadian Debentures Corp., 95.06; Dymont, Anderson and Co., 95.03; A. E. Ames and Co., 95.53; McNeill, Graham and Co., 94.41.

**Hamilton, Ont.**—The United Financial Corporation, Ltd., and R. C. Matthews and Company have purchased an issue of \$450,960 bonds, comprising a number of miscellaneous parcels, bearing interest at 5 and 6 per cent. and maturing from one to twenty years. The issue is made up as follows: \$190,733 bear interest at 6 per cent., and are repayable serially in the years 1931 to 1940, inclusive, the balance bear 5 per cent., \$193,951 being repayable in 19 annual instalments and \$66,276 in nine annual instalments. The price paid for the issue was 93.11.

**Saskatchewan.**—The following is a list of sale reported by the Local Government Board from December 18 to 24, 1920:—

School Districts—Pheasant Forks, \$14,000 8 per cent. 20-instalment, J. A. Thompson and Co., Winnipeg; Saint Front, \$2,700 8 per cent. 10-instalment, Waterman-Waterbury Mfg. Co., Regina.

Rural Telephones—N. W. Smiley, \$13,500 8 per cent. 15-years annuity, Harris, Read and Co., Regina; Haultain, \$600 8 per cent. 15-years annuity, A. L. Koyl and Co., Saskatoon.

**Scarboro Township, Ont.**—Harris, Forbes and Co., Inc., have purchased \$130,000 7 per cent., 30-instalment debentures at a price of 104.277, at which rate the township pays about 6.59 per cent. for its money. A large number of tenders were received as follows: Harris, Forbes and Co., Inc., 104.277; McNeill, Graham and Co., 104.05; Wood, Gundy and Co., 103.54; R. C. Matthews and Co., 103.36; A. E. Ames and Co., 103.13; Brent, Noxon and Co., 102.66; Canadian Debentures Corp., 102.51; Dymont, Anderson and Co., 102.33; Turner, Sprague and Co., 102.29; United Financial Corp., Ltd., 102.28; R. A. Daly and Co., 102.17; C. H. Burgess and Co., 102.16; Dominion Securities Corp., 102.14; A. Jarvis and Co., 99.04; Nesbitt, Thomson and Co., 99.00.

**Oshawa, Ont.**—Many tenders were received for the \$125,000 6 per cent. 30-instalment waterworks debentures. The offer of R. C. Matthews at 95.06, which is on about a 6.48 per cent. basis, was the highest and was accepted. The following is the list of bids:—

R. C. Matthews and Co., 95.06; A. E. Ames and Co., 94.949; Wood, Gundy and Co., 94.38; Brent, Noxon and Co., 93.808; Harris, Forbes and Co., Inc., 93.717; United Financial Corp., Ltd., 93.68; A. Jarvis and Co., 93.65; C. H. Burgess and Co., 93.54; Dominion Securities Corp., 93.453; Turner, Sprague and Co., 93.432; Dymont, Anderson and Co., 93.37; T. S. G. Pepler and Co., 93.27; McNeill, Graham and Co., 92.47; Canadian Debentures Corp., 92.03.

**Manitoba.**—The province last week disposed of \$2,000,000 6 per cent. 10-year bonds, payable in Canada and New York, to a syndicate comprising W. A. Mackenzie and Co., R. A. Daly and Co., and Strang and Snowden, at a price of 101.11, which is on about a 5.85 per cent. basis. Other tenders received were:—

Harris, Forbes and Co., Inc., and Assoc. ....	101.01
Dominion Securities Corp. and Assoc. ....	100.856
Wood, Gundy and Co., Minnesota Trust and Loan Co. and Assoc. ....	100.77
A. E. Ames and Co., and the United Financial Corporation, Ltd. ....	98.633

Baird and Botterill, representing a syndicate, made an offer for 15-year bonds payable in Canadian funds, but as this was not called for, the proposal was not considered, and the price offered was not revealed.

The proceeds of the issue will be used for good roads, \$1,000,000, and for supplying working capital for rural credits, \$1,000,000. The bonds have all been disposed of in the United States at a price to yield the investor 7.40 per cent.

#### ANOTHER PARIS LOAN HERE

The city of Paris, France, has authorized R. A. Fargeaud, 35 St. James Street, Montreal, Que., its representative in Canada, to sign up an offering of \$4,000,000 city of Paris 6 per cent. loan, with the Banque Nationale and the Banque Provinciale. The amount is part of the \$20,000,000 authorized by the city of Paris for placement in Canada, and of which \$2,000,000 has been offered to the public. The whole amount will be used for the purchase of foodstuffs, etc., in Canada. M. Fargeaud states that in connection with recent purchases, the city of Paris has expressed complete satisfaction, the commodities sent by the Dominion being of excellent quality. The announcement of the terms, etc., of the loan will not be made public until all arrangements have been completed with the banks.

Tenders received up to February 1st, 1921.

S. SCHOOLEY,

Secretary-Treasurer.

# Corporation Finance

**Permanent Increase in Bell Telephone Rates Opposed by Toronto and Montreal Representatives at Ottawa—Advance Should be Only Temporary, it is Contended—Barcelona Revenue Lower But Strong Position has been Maintained—Dominion Bridge Earnings Show Big Crop—Winnipeg Railway Revenue Continues to Increase**

**St. Thomas Packing Company.**—The annual financial statement for 1920 shows that the company enjoyed the best year in its history, with a total turnover of \$1,005,000, which is an increase of about 50 per cent. over 1919. A dividend of 7 per cent. has been declared for the year.

**Brazilian Traction, Light and Power Company.**—Net earnings of the company for November, 1920, amounted to 5,824,000 milreis, as against 4,939,000 milreis for the same month a year ago. This showing is not quite so good as in previous months, but it is not by any means the worst for the year. Total gross earnings for the eleven months amounted to 122,306,000 milreis, an increase of 18,971,000 milreis over the previous year. Net amounted to 64,308,000 milreis for the eleven months, an increase of 10,773,000 milreis.

**Winnipeg Electric Railway Company.**—Net earnings continue to increase, while operating expenses and taxes for November were almost down to the figures of the same month in 1919. Net earnings for eleven months show a gain of \$408,498, as will be seen from the following table:—

	Nov., 1920.	Increase.
Gross earnings .....	\$ 483,433	\$ 21,784
Operating expenses and taxes .....	363,232	900
Net earnings .....	\$ 120,201	\$ 20,884
Eleven months ended November 30—		
Gross earnings .....	\$4,768,914	\$929,158
Operating expenses and taxes .....	3,553,879	520,661
Net earnings .....	\$1,215,035	\$408,498

On the street railway lines in the city of Winnipeg the company carried over 8,000,000 more passengers for the eleven months ended November 30, 1920, than for the same period in 1919. There were good increases in the light and power departments also.

**Toronto Railway Company.**—The earnings of the company, as disclosed in the annual statement to be presented to shareholders at the annual meeting on February 2 next, show a gain of more than \$700,000 over gross earnings for 1919. The total earnings for 1920 are \$7,875,774, as compared with \$7,175,166 in 1919. Out of this the finance commissioner of Toronto will receive as percentage \$1,550,000, which is about \$209,000 in excess of the sum placed in the estimated revenue for 1920.

The number of passengers carried was about 200,000,000, or an increase during the year of 18,000,000. In spite of the larger amount of gross earnings, it is understood the company will close the year with a deficit. This is largely caused by increased operating costs, particularly in wage increases granted to the men. The amount of the deficit is not given.

**Dominion Bridge Company, Ltd.**—Net earnings of the company for the year ended October 31, 1920, amounted to \$964,530, as compared with \$1,343,305 for the previous period. These earnings are equivalent to 14.85 per cent. on the outstanding stock, as against 20.65 per cent. in 1919. Speaking of the year's results, the report of the directors states:—

"The volume of business booked during the year under review has not been up to the average, and your plants at Lachine, Toronto and Ottawa have run at less than normal capacity. It is gratifying, however, to state that the Winnipeg plant has carried out the most satisfactory program since that branch was opened. The expected reduction in value of materials is now taking place, and your inventories have been figured with this fact in view. Investments in other companies and in fixed assets are conservatively rated.

"The liquidation of the St. Lawrence Bridge Company was completed during the year. Your capital invested in that company has been returned, and dividends to the amount of \$265,797.50, which are included in the profits for the year, were also received. The Dominion Copper Products Company, Limited, in which your company holds the controlling interest, has sold its plant and equipment to a new company. The land and buildings used by Dominion Copper Products Company, but which belonged to your company, have also been sold. The price received for the land and buildings has been applied to the reduction of fixed assets and the affairs of the Dominion Copper Products Company, Limited, are now being liquidated."

The falling off in the revenue has not affected the general financial position of the company. This is evident from the balance sheet, which shows liquid assets of \$6,586,295, as against \$5,796,797 a year ago, and current liabilities of \$1,448,340, as compared with \$1,929,391. Total assets show a slight falling off. The following are some of the principal comparisons:—

	1920.	1919.
Plant .....	\$ 4,115,863	\$ 4,461,323
Investments in other companies..	2,104,290	2,625,187
Accounts and bills receivable....	1,903,424	1,526,523
Inventories .....	3,115,745	2,114,902
Cash .....	391,451	192,253
Reserves .....	607,476	593,879
Surplus .....	4,293,144	3,848,613
Total assets .....	12,848,960	12,956,326

**Barcelona Traction, Light and Power Company, Ltd.**—For several years the company has had a difficult time, owing to strikes and other labor troubles, occasionally interrupted by assassination, and it cannot be said that the country has settled down fully yet. Nevertheless, the company has maintained a strong financial position in the face of these difficulties, although revenue has suffered to some extent. The annual statement for the year ended December 31, 1919, which has just come to hand, shows net revenue at \$2,194,353, as against \$2,516,920 in 1918, \$2,354,964 in 1917 and \$1,875,315. These figures, which include revenue from investments from the tramways, indicate the amount available for interest on bonds, payable in cash, and for construction expenditure in accordance with the funding arrangements of 1915 and 1918. The interest, payable in cash, on the company's bonds amounted to \$1,803,169 in 1919.

Important progress in the company's property is reported. Two units of the new power-house at Camarasa were brought into operation in the latter half of 1920, but a certain amount of work remains to be done to complete the installation. The new plant adds at once approximately 34,000 h.p. to the available hydro-electric power of the Ebro Irrigation and Power Company, a subsidiary, and three more units of 17,000 h.p. each can be installed as required. The hydro-electric power of the Ebro company, now available, amounts to approximately 130,000 h.p. Operations of the Ferrocarriles de Cataluna Company have again been satisfactory, earnings from the Tarrasa extension having exceeded the estimates. The new cars ordered from the United States have now reached Spain after a long delay and are being assembled. Their increased carrying capacity will add materially to the earning power of the company. This extension in rolling stock was financed by the sale of 2,000,000 pesetas of 5 per cent. bonds to Spanish bankers in May, 1919. The construction of the extension to Sabadell was begun in November, 1920.

The consolidated balance sheet shows that total assets have increased from \$117,851,688 to \$122,761,707, while the

# NOTICES

## ONTARIO PULP AND PAPER COMPANY, LIMITED

Incorporated under the laws of the Province of Ontario

To the Holders of Six Per Cent. First Mortgage 30-Year  
Gold Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 7 of a Supplemental Mortgage dated the 13th of January, 1915, made between The Spanish River Pulp and Paper Company, Limited, and The Royal Trust Company, the holders of the various bonds mentioned in said clause including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 7 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1 3/4% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage 30-Year Gold Bonds their proportion of said Preference Shares under said Clause 7, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to The Royal Trust Company, 59 Yonge Street, Toronto; or The Royal Trust Company, Montreal, Quebec; or Agents of the Bank of Montreal, 64 Wall Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or The Bank of Montreal, 47 Threadneedle Street, London, E.C., England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

THE ROYAL TRUST COMPANY,

Trustee.

Toronto, November 24th, 1920.

## THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED

Incorporated under the laws of the Province of Ontario

To the Holders of Six Per Cent. First Mortgage Sinking  
Fund Gold Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 7 of a Supplemental Mortgage dated the 20th of January, 1915, made between The Spanish River Pulp and Paper Mills, Limited, and The Montreal Trust Company, the holders of the various bonds mentioned in said clause including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 7 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1 3/4% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage Sinking Fund Gold Bonds their proportion of said Preference Shares under said Clause 7, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to The Montreal Trust Company, 61 Yonge Street, Toronto; or The Montreal Trust Company, Montreal, Quebec; or The Agency The Royal Bank of Canada, 68 William Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or Montreal Trust Company, 2 Bank Buildings, Princess Street, London, E.C.2, England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

MONTREAL TRUST COMPANY,

Trustee.

Toronto, November 24th, 1920.

351

capital account has advanced \$3,000,000 to \$114,171,513. Liquid assets are shown as \$7,974,998, as against liabilities of the same category of \$5,134,501. The figures last year were \$6,867,505 and \$5,569,748, respectively. Reserves for depreciation are given as \$1,342,134, compared with \$482,321 at the end of 1918.

Bell Telephone Company of Canada.—Hearing of the company's application for increased rates was resumed at Ottawa on January 5, before the Dominion Board of Railway Commissioners. The company placed its position before the board, submitting many figures in support of its arguments. Opposition to the company's claims was given chiefly

by G. R. Geary, Toronto counsel, and W. J. Hagenach, telephone expert, who appeared from Montreal.

C. F. Sise, general manager of the Bell Telephone, was chief witness for the company. There had been heavier operating costs in the last four months, Mr. Sise stated. He placed before the board a statement showing the result of one year's operation under present tolls and charges. In this statement actual figures were taken from May 1 to November 30, 1920, and showed the following revenue: Exchange revenue, \$11,716,538; toll revenue, \$4,618,751; miscellaneous, \$86,261; total operating revenue, \$16,421,551. Expenses over the period reached a total of \$17,338,356. Mr. Sise said the company's loss during the eleven months of operation had been over \$1,500,000, which did not include payment of dividends. The increased rates were necessary to give the public better service and provide for extensions. The increased rate was to attract new capital but not to be used in the form of new capital for extensions.

The budget first drawn up was for an outlay of \$25,000,000, and this had been revised to \$16,000,000. Asked why the company sought to raise such a large amount of its revenue on the exchange rates, Mr. Sise said that the exchange rates were the chief income of the company. A statement was filed showing the estimated increased revenue to be derived from the proposed rates, and the position that the company would find itself in if the increases were granted. The revenue which would be derived from the proposed rates was estimated at \$4,577,687. This with non-operating revenue, dividends from investments and interest on bonds and deposits made a total of \$5,005,525. Net earnings were estimated at \$3,184,612. The balance available to apply toward increased operating and maintenance expenses and cost of financing was estimated at \$131,388. Mr. Sise stated that the company believed that a flat rate was less inequitable in small towns than in large cities and therefore had suggested that measured rate only in the five cities. In these the company had proposed the measured rate in business phones only because there was not much difference in private house use.

G. R. Geary, K.C., corporation counsel for the city of Toronto, who opposed the company's claims, stated that the increased rates had been based on a hypothetical year's receipts and expenses calculated from the experience of the company from May 1 to November 30, 1920, when costs of labor and material were at the highest, and asked the board to consider the application for changed rates as a temporary or emergency measure only. W. J. Hagenach, appearing for Montreal, made similar proposals, asserting that many commodities, including those used by the telephone company, are falling in value. As conditions are unsettled, any relief given should be of a temporary character.

J. H. Winfield, manager of the Maritime Telephone Co., serving the province of Nova Scotia, stated that measured service to telephone users in Halifax, N.S., has proved a saving to the majority of subscribers. The use of telephones, he said, had increased under measured service. There were about 10,000 telephones in Halifax now against 7,000 in 1914. People who could not afford telephones at \$52.50 per year, the flat rate previous to measured service, had installed phones at the rate of \$3 per month. The majority of users under measured service found it was a saving to them on telephone outlay.

There was a good deal of controversy regarding the contracts between the Bell Company and its subsidiary, the Northern Electric Co. Chief Engineer Lash of the Bell Telephone Co. asserted that the business dealings between the Bell Telephone Co. and the Northern Electric, which supplies most of the apparatus used, is conducted on strictly business lines, and that prices paid are in all instances closely checked and fair and reasonable. They maintained that the equipment supplied by the Northern Electric was the best suited for long distance transmission. Mr. Lash stated that a good deal of trouble was experienced in connection with independent companies because their equipment was often of a lower standard than that of the Bell Company.

## RECENT FIRES

(Continued from page 57)

baker taxi, valued at \$2,500, caught fire on Portage Avenue. The car was a total loss, no insurance being carried.

In our issue of December 31 the notice about the fire in the barn belonging to the General Administration Society was in error. The barn belonged to Mr. Love.

**Glance Bay, C.B.**—January 6—The front range light at Glance Bay harbor, together with all the supplies for the winter, were destroyed by fire.

**Glance Bay, N.S.**—January 12—Glance Bay Hotel was destroyed by fire. The loss is estimated at \$30,000. One fatality.

**Guelph, Ont.**—January 9—The barn of A. N. Harrison, Guelph township, was burned through the explosion of a lantern. The loss is about \$5,000, with \$2,200 insurance.

**Halifax, N.S.**—December 30—Garage situated at the rear of the old Fraser livery stables, and owned by C. Brister and Son, Ltd., was damaged by fire.

**Hamilton, Ont.**—December 30—The stock and interior of the Model Cloak and Suit Co. store at 46 James Street North was damaged by fire. The loss is estimated at \$80,000; insurance does not exceed \$25,000.

**Hazelton, B.C.**—December 26—Fire caused a loss estimated at \$100,000 when the block occupied by the G.T.P. restaurant was burned.

**Lariviere, Man.**—January 7—The farm home of James Boyd, situated three miles west of the town, was totally destroyed by fire. The loss will be heavy as a very small amount of insurance was carried.

**London, Ont.**—December 28—Damage estimated at \$20,000 was caused by a fire which swept through the premises at 121 Dundas Street, occupied by the United Manufacturers, of Toronto. There is insurance of \$30,000.

**January 1**—The frame garage of C. H. French at 286 St. James Street was damaged by fire to the extent of \$2,000.

**Mahone Bay, N.S.**—December 30—Woodshed of F. Holloway was destroyed by fire.

**Montreal, Que.**—December 28—The home of Achille Wybou, 3820 St. Lawrence Boulevard, was destroyed by fire.

**January 6**—The four-story building at 201-203 Notre Dame Street East was damaged by fire. The fire originated on the second floor of the building, occupied by the Atlas Whitewear Co.

**January 7**—The factory of Guenette Co., 899A LaSalle Avenue, Maisonneuve, was damaged by fire.

**January 10**—Storehouse used by the Lawrence Wilson Co. in rear of 42 Craig Street West was destroyed by fire.

**Moose Jaw, Sask.**—December 26—The farm residence of John Logan, south-west of the city, was destroyed by fire. The origin of the fire is believed to be due to the overturning of a lantern by a dog. The loss is estimated at \$3,500.

**Ottawa, Ont.**—January 7—Fire, apparently caused by an overheated furnace, caused damage estimated at \$5,000 to the furnace foundry and repair shop at 287 Lyon Street owned by the Pease Foundry Co., Toronto, and operated by W. H. Murphy, Ottawa agent.

**Quebec, Que.**—January 2—The dry goods store of J. P. Lammond et Fils, 727 St. Valier Street, was damaged by fire to the extent of \$25,000.

**Reedsdale, Que.**—January 3—Barn belonging to Ben Seale was destroyed by fire. The loss is estimated at \$7,000.

**St. Gregor, Sask.**—December 29—Three small children were burned to death in a fire that destroyed the home of Ben Taphorn.

**St. Hyacinthe, Que.**—January 4—Grain establishment of G. N. Lariviere, that of A. Bondin and Co., plumbers, and the candy store of T. J. Orsall were destroyed by fire with a loss of \$25,000.

**St. Johns, Que.**—January 1—Fire, believed to be of incendiary origin, destroyed stables and hayloft of the National Hotel. The damage is estimated at \$4,000.

## Saskatchewan Legislation Moderate in Character

**Recent Session Devoid of New Departures—Grants for Education Substantially Increased—Several Bills Affect Provincial and Municipal Finance—House Goes on Record for Lower Tariff, Wheat Board, and More Railways**

JUDGING from Saskatchewan's record, the present year will see little legislation of a radical character. This province was the first to hold its 1920 session, commencing in fact on November 4 and closing on December 15. Nearly all the legislatures meet during the winter, but it is of course the exception for the session to end before the New Year. Quebec opened a few days ago, and Ontario will open next week.

Four bills were passed through the Saskatchewan legislature relating to important private companies operating under provincial charters. One relates to the Agricultural Insurance Company, which was incorporated in 1916, and provides that the capital shall consist of \$1,000,000 in 10,000 shares, and that no one person shall hold more than twenty-five shares; authorization is also given to the company to write fidelity and guarantee business.

The Midwest Fidelity and Guarantee Company, Ltd., is incorporated with an authorized capital of \$500,000 and head office in Regina. O. F. Seeker, Edmund Simon and John L. McDougall are the petitioners for the company. It is authorized to transact all kinds of insurance business except life, and may commence as soon as \$200,000 of capital has been paid up.

New powers are given to the Saskatchewan Guarantee and Fidelity Company, which was incorporated in 1908, and which will now be authorized to write fire and windstorm, inland transportation, inland marine, accident, employers' liability, steam boiler, sickness, automobile, burglary, sprinkler, hail and live stock insurance, in addition to the lines for which it was already authorized. Provision is also made for amalgamation, purchase or sale with any other company transacting similar business.

### Loan Company Change

Authority is given for the Netherlands Investment Company of Canada, Ltd., to be registered to do business in Saskatchewan. It is required to show that it has \$75,000 of stock subscribed and \$25,000 paid up, and it is not to borrow in Saskatchewan unless the aggregate of the sums of money borrowed by the company does not exceed four times the combined amounts of its then actually paid-up and unimpaired capital stock and reserve, but cash or Dominion or Imperial war loan bonds may be deducted in determining this aggregate. The objects of the Netherlands Investment Company of Canada, Ltd., as defined in its Manitoba letters patent of November, 1920, are to lend and borrow money, etc., but do not include banking, insurance or trust company powers.

There are two slight insurance amendments. One relates to the Municipal Hail Insurance Act; the other deals with workmen's compensation, increasing the maximum payment from \$1,800 to \$2,000.

Measures affecting the public revenues are also in evidence. There is an act to amend the Travelling Shows Act,

imposing daily fees for circuses, etc., of from \$10 to \$250, according to the size of the outfit and the city or town where it is being shown. An amendment to the Wild Lands Tax Act requires the assessor of every municipality to make a special assessment of lands not later than August 1, 1921, and forward a statement to the Wild Lands Tax Commissioner for the purpose of equalizing assessments. There is also a slight amendment to the Succession Duties Act.

Higher expenditures for education are provided in the "Act to provide for the payment of grants in support of elementary education." This provides for the payment of \$1.50 per day, and of 60 cents per day for the first year and 40 cents per day thereafter in the case of rural districts. In town districts the payment is to be \$1.50 per day, but with larger schools it is lower. Three dollars per day is to be granted for continuation schools. There are also special payments for science equipment, lunch facilities, etc.

An amendment to the Municipalities Seed Grain Act provides that seed grain obligations shall rank second to taxes and to mortgages. There is also a "Seed Grain Advances Act, 1920," providing that advances for seed grain purposes may be made by the mortgagee.

### Provincial Borrowing

The total authorized under the Saskatchewan farm loans system is increased from \$10,000,000 to \$15,000,000, and the total under the Agricultural Aid Act is raised from \$1,000,000 to \$2,000,000.

Municipal finances are also affected by several bills. There is one "Act to amend the Rural Municipality Act," which deals with the appointment and duties of treasurers and with equalization of assessments. An Act to amend the Village Act deals with the auditing of accounts, etc. There are also Acts to amend the Arrears of Taxes Act, the City Act and the Town Act.

An Act to amend the Land Titles Act provides that if a registered mortgagee is absent from the provinces when payment is due, and there is no one else authorized to receive payment, the money is to be paid into court.

A proposal of Messrs. Yorath and Moran, of Saskatoon, for the construction by the Saskatchewan Paved Highways Commission Company, Ltd., of a system of paved toll roads in certain parts of the province, aggregating 1,067 miles, similar to those in California, at an estimated cost of \$24,000,000 within ten years, was turned down by the standing committee on agriculture.

### Want Wheat Board Again

While Saskatchewan's legislative program has thus far not been important, the session has been interesting in some other ways. On November 10, Hon. Geo. Langley, minister of municipal affairs, moved the following resolution, which was passed unanimously:—

"Whereas to meet war conditions and protect the general public, the Government of Canada fixed a price for the Canadian wheat crops of 1917 and 1918; and

"Whereas early in July, 1919, the Grain Exchanges were allowed to open for the purpose of marketing the wheat crops of 1919; and

"Whereas, after being open for less than a month, they were again closed by government order and by an order of the Governor-General-in-Council, dated July 31, 1919, the Wheat Board was created to market the wheat crop of 1919; and

"Whereas that body marketed the wheat crop of 1919 to the great benefit and satisfaction of the farmers; and

"Whereas, as the result of opening the exchanges to market the wheat crop of 1920, the price of wheat has declined seventy-five cents a bushel, although the world's supply of wheat does not appear to be any larger in 1920 than it was in 1919;

"Therefore, this assembly, representing the largest wheat-growing province in the Dominion, urge the Government of Canada to reappoint at once the Wheat Board, with the chairman and assistant chairman of last year, to take charge of and market the balance of this year's wheat crop."

#### More Branch Railway Lines

On November 17 the following resolution was introduced by Mr. Gemmell, and passed unanimously:—

"Whereas there are a number of branch lines of the Canadian National Railways in the Province of Saskatchewan, some of which have been projected for many years; and

"Whereas on some of the branch lines construction work has been carried on in recent years very slowly, and thus prevented the development of the province and militated against the prosperity of the people; and

"Whereas many people in the province were induced in years past to locate in certain sections of the country by reason of the fact that the branch lines were projected in order to furnish much-needed railway facilities; and

"Whereas many people are still without such facilities; and

"Whereas the development of the province and the success of the people depend in a very large measure upon the extent to which transportation facilities are provided; and

"Whereas many of the people in the province are at the present time seriously handicapped by reason of the fact that they have no railway facilities within reasonable distance, and are therefore compelled to spend time and money in obtaining their supplies and in drawing their grain to market;

"Therefore be it resolved, that, in the opinion of this assembly, the Dominion authorities should be petitioned to appropriate at the earliest possible date sufficient sums of money to complete the branch lines of the Canadian National Railways which are already projected into various sections of the province, and that they should be urged to continue construction work on such branch lines and complete such branch lines at the earliest possible date."

#### Urge Lower Tariff

On December 2, Mr. Garry moved the following resolution, which was passed with just one dissenting vote:—

"Whereas this assembly has, on various past occasions, forwarded to His Excellency the Governor-General resolutions advocating substantial reductions in the customs tariff of Canada and other fiscal reforms; and

"Whereas agriculture is the basic industry of Canada, and especially of Saskatchewan, the prices received for the products of which are regulated by world prices, whether sold within or without Canada, the result being that the agricultural industry carried all the burdens of the tariff without receiving any of its benefits; and

"Whereas the high cost of living, which is largely the result of the said tariff, bears upon our citizens, both rural and urban, to such an extent as to gravely jeopardize the

financial ability of our people to bear the ever-increasing load; and

"Whereas Canada is now confronted with a huge national war debt and greatly increased financial obligations, which can be most readily and effectively reduced by the development of our natural resources, chief of which is agricultural lands; and

"Whereas our returned soldiers have heroically and at great sacrifice, in common with their comrades of all the allied armies, achieved for us a signal victory, and have now returned to us, and in many instances are resuming or beginning the business of agriculture, and deserve every consideration, encouragement and fair play; and

"Whereas the protective tariff has resulted in the creation of trusts, mergers and combines, under which the common people generally have been outrageously exploited through the elimination of competition, the ruination of many small industries and the advancement of prices on practically all manufactured goods to the full extent permitted by the tariff;

"Therefore, be it resolved, that, in the opinion of this assembly, it is the duty of the Government of Canada at the coming session of parliament to introduce legislation which shall have for its effect the following:—

"1. An immediate and substantial all-round reduction of the customs tariffs.

"2. The reduction of the custom duty on goods imported from Great Britain to one-half the rates charged under the general tariff, and that further gradual uniform reductions be made to the remaining tariff on British imports that will ensure complete free trade between Great Britain and Canada.

"3. The placing upon the free list of all foodstuffs not included in the reciprocity agreement.

"4. The placing on the free list of all agricultural implements, farm machinery, farm tractors, mining, flour and sawmill machinery and repair parts thereof, vehicles, fertilizers, gasoline, illuminating, lubricating and fuel oils, coal, lumber, cement, fishing nets, net twines and fishermen's equipment, as well as the raw material and machinery used in their manufacture.

"5. The reduction of the customs duty on wearing apparel and footwear and other articles of general consumption (exclusive of such articles as may be regarded as luxuries), and on such raw material as enters into the manufacture of the same.

"6. The immediate extension to Great Britain of all tariff concessions granted to other countries.

"7. The obligation upon all corporations engaged in the manufacture of products protected by the customs tariff to publish annually comprehensive and accurate statements of their turnover and earnings.

"8. The public hearing before a special committee of parliament of every claim for tariff protection by any industry."

#### LIABILITIES OF PRINCE'S, LTD.

E. R. C. Clarkson, liquidator for Prince's, Ltd., a Toronto restaurant which started business a few weeks ago on a large scale, presented a statement of assets and liabilities to a meeting of the creditors on January 12, when a committee was appointed to dispose of the assets. An offer on the assets is expected in the course of a few days. If the creditors are unable to dispose of the company as a going concern, it will be sold retail, under which circumstances the premises will revert to the landlord.

The liabilities are: Direct, \$220,712; contingent claims, estimated, \$35,000; preferred claims, \$19,280; total, \$243,493. Assets: Expenditures on building and leasehold premises, \$156,121; plant and equipment, \$123,858, subject to liens of \$35,243, leaving an equity of \$88,614; stores and supplies, \$20,483; claims against contributories, \$690; total assets, \$265,909, showing nominal surplus to creditors of \$22,416.

## WAYS AND MEANS OF UNEMPLOYMENT INSURANCE

## Opinion is Fund Should be Maintained by Assessments on Government, Employers and Employees—Might Reduce Unemployment

(Special to *The Monetary Times*.)

Ottawa, January 20, 1921.

LEGISLATION to bring about unemployment insurance is to be introduced during the session of parliament commencing on Monday, February 14, 1921. The plan to be followed will call for contributions from the worker, the employer and the state, and it is estimated by Senator Gideon Robertson, Minister of Labor, that a period of two years will be needed before sufficient funds can be accumulated to enable the government to deal adequately with any period in which the unemployment situation is acute.

At a conference in Washington in October, 1919, of the International Labor Office, created under the Treaty of Peace, one of the resolutions accepted by the conference called for unemployment insurance. In speaking of the resolutions passed at the International Labor Conference, the minister of justice said that the eight-hour day legislation referred to in one resolution was a matter for original provincial legislation, but he said that the unemployment insurance legislation called for had a federal aspect because the Employment Bureau system of Canada, though administered by the provinces, is co-ordinated by the Dominion government. If unemployment insurance is accepted by parliament as expected, the administration of the new legislation will fall to this system of federal labor bureaux.

## Labor Wants Industry to Bear Cost

On account of the excessive amount of unemployment this winter, both the Great War Veterans' Association and the Trades and Labor Congress of Canada will press on the government before and during the session the necessity of this legislation. Their exact suggestions have not yet been worked out, but it is known that the views of organized labor are different from those of the government. In a bulletin sent out this month from the head office of the Trades and Labor Congress of Canada, their policy in this respect is stated to be "the creation of a State Employment Insurance Fund by assessments on industries similar to the methods adopted with provincial compensation funds, this to be administered under the authority of the Dominion government." Under this plan payments would be made from this fund not only to those unemployed, but to those under-employed as well. The opinion is expressed that "by placing the cost of unemployment largely on industry, greater efforts will then be undertaken than are now made by those controlling industry to obviate unemployment. This memorandum, signed by Mr. Tom Moore, president, also suggests that the provincial and Dominion governments should contribute towards this fund, at least the cost of administration. Mr. Moore argues that this system will prevent a good deal of unemployment, because it will keep up purchasing power, and he thinks the government should subsidize the plan because it will be saved a good deal of expenditure which ordinarily is associated with periods of unemployment. The Great War Veterans' Association is co-operating along general lines with the Trades and Labor Congress, but it has not worked out the details of its policy as yet.

## Would Increase Overhead Expense

The government does not believe this plan of "assessments on industries" to be workable. It is thought that it would add too much to the overhead charges, and would not provide the same incentive to efficiency as the plan to be adopted of having worker, employer and state share the cost.

Asked how he thought this plan would contribute to efficiency, Senator Robertson said, "Take a worker in any

of the building trades. If he knows that he is working on the last building for the season, it is only human nature that he should try to draw that job out. The fear of unemployment is not only one of the most active agents of unrest and discontent, but it is apt to work out in lowered efficiency in cases such as I have described."

## MANITOBA INVESTMENT SITUATION STRENGTHENS

## Signs of Renewed Activity—Edward Brown and Company Expand Business—Manitoba Hail Insurance Act Will Likely be Amended

(Staff Correspondence.)

Winnipeg, January 20, 1921.

THE outlook in Winnipeg this week continues to show some improvement, and the feeling which we mentioned last week continues to be noticeable. Local bond houses report considerable money available for investment on the local exchange.

The firm of Edward Brown and Co. are enlarging their offices and are putting in a private wire in connection with the opening of a stock and bond department. They are opening new offices for this purpose in the MrArthur Building, corner Portage and Main. The private wire is in connection with the firm of Simons Day Co. This is one of the largest grain concerns in the United States, having offices in New York, Chicago, and St. Louis, also in Montreal and Toronto. This is a new venture for Messrs. Edward Brown and Co., whose business has grown considerably in the last few years.

## Great West Loan Officers Meet

The following branch managers of the Great West Permanent Loan Co. and Imperial Canadian Trust Co. met in conference with the general manager, A. T. Alexander, in Winnipeg this week; F. B. Heath, manager Vancouver branch; S. W. McLeish, Victoria branch; G. A. Holman, Edmonton branch; E. E. Campbell, Calgary branch; and T. B. Willan, Regina branch.

An amendment to the Hail Insurance Act in Manitoba will be submitted at the coming session of the legislature by A. E. August, M.L.A., for Dufferin, sponsor of the bill at the last session. This amendment will make it unnecessary for any of the sixteen municipalities voting in favor of it at the last municipal elections to take a further vote, the one already taken remaining effective. Any municipality under the amendment may take a vote on its own initiative or upon petition of 25 per cent. of the ratepayers. As soon as 35 municipalities vote in favor of joining the Co-operative Hail Insurance Co., a general meeting will be called in Winnipeg to make the necessary plans.

## MEXICO WILL PAY FOR CARS

The Mexican government has accepted the terms of a contract prepared by the American Railway Association covering the loss of American and Canadian freight cars in Mexico during the revolutionary outbreaks in that country, and on January 1, 1921, free interchange of traffic between the United States and Mexico, which had been suspended since January 1, 1919, was resumed. The Mexican government has paid the first of four instalments aggregating \$486,000 for 468 lost cars, and future interchange of traffic will be made on the basis of the American per diem rate of \$1 a car per day. The contract, signed by Francisco Perez, general director of the Mexican Government Railroad Administration, was received by the American Railway Association recently.

## FIRE AGENTS' COMMISSIONS IN ONTARIO

Agreement Reached With Agents Outside Toronto, but Situation as Regards Latter City is Still Unsettled

**A**FTER several conferences, the Ontario Insurance Department has reached an agreement with the executive of the Ontario Fire Insurance Agents' Association regarding agents' commissions. In place of the superintendent's original proposal of 15 per cent. on all premiums, the present arrangement is for 20 per cent. on three year business and mercantile risks, and 15 per cent. on all other business. The final meeting was held on January 11, and the following statement was issued to agents on the 13th by J. S. Dowling, of Brantford, president of the association:—

"Legislation will be enacted somewhat along his proposed lines in regard to the issuing of licenses with the object of eliminating such class of agents as he has already suggested. In addition to this the matter of an endorsement fee will become a fixed principle and every endorsement fee will have a charge and the agent will retain this.

### Fifteen and Twenty Per Cent.

"In regard to commissions. You know the original proposition was a flat 15 per cent. on everything, then he proposed 15 per cent on everything but three year dwelling risks which were to have 20 per cent. Our new arrangement with the superintendent is that we get 20 per cent. commission on all the three year risks, irrespective of whether they are residences, churches, farms, etc., and we are also to get 20 per cent. on all mercantile rated buildings, irrespective of construction and not influenced because of the use of power. The balance of the business, which would include manufacturing risks and contents of mercantile buildings, would remain at 15 per cent. flat. These commissions are to apply throughout the province although the Toronto rates are not yet adjusted, but everyone will get the above rate of commission no matter whether it is written by the local agent or outside brokers.

"Your committee feels that the above solution, coupled with the fact that it will probably obviate legislation entirely, will meet with your approval and if so it will enable us all to settle down to our insurance business after a good deal of strenuous work. The committee which assisted me deserve your thanks for the time and energy they spent on this work and they deserve my thanks for the very loyal spirit of co-operation they gave me, and also for their discussion to reason these solutions out."

### No Agreement for Toronto

Whether or not this agreement will take the form of legislation depends to a large degree upon the agents, said V. Evan Gray, superintendent of insurance, in a statement to *The Monetary Times*. The association, moreover, does not presume to speak for the Toronto agents, as it has very few members in that city. In Toronto the situation is complicated by the fact that some companies maintain branch offices for securing local business while others rely on general agencies. The agencies have an organization called the Toronto Insurance Conference, and the latter is now negotiating with the superintendent with a view to reaching an agreement for the city business.

There may, therefore, be no legislation of this kind. According to Mr. Gray the average commission outside of Toronto under the new plan will be 17.5 per cent., compared to 18.6 per cent., previously. It is the intention of the department, he said, to see that any reduction in cost secured in this way be passed on to the public in the form of reduced rates. According to a circular issued on December 2, "The Department will see that the decreased cost of carrying on the business of Fire Insurance in the Province under the proposed rules is transferred to the advantage of the insuring public in the form of lower insurance rates."

## UNION BANK HAD PROFITABLE YEAR

A profitable year was experienced by the Union Bank of Canada in 1920, due to the increased business handled by the bank. Net profits amounted to \$1,603,842, as compared with \$932,250 in 1919. H. B. Shaw, general manager, outlined the growth of the institution in his address at the annual meeting last week. The details have already been reviewed in these columns.

The address of John Galt, president, was particularly interesting, in view of the emphasis which was placed on the development of the west. Among other things, Mr. Galt explained that the satisfactory results shown by the bank were due to the fact that its resources were fully employed to the limit of prudence. Profits, however, were not made at the expense of the bank's clients; current rates of interest charged by Canadian banks, he declared, have remained practically unchanged since 1914. The banks were not among the profiteers, and the fact may not be among the least of those which enabled this country to come through the war and reconstruction period with relatively small inconvenience. A help to the banks in the connection was the privilege of re-discounting permitted by the government. To quote Mr. Galt, it "enabled Canadian banks to take care of the country's trade throughout the period when high prices involved the employment of a vastly greater amount of capital than formerly, and to finance all legitimate requirements." The farming industry was the first to undergo the deflation of prices. Both grain and livestock declined in value. The crop yield, however, was a good one as regards quantity, while the quality generally was higher than usual, a factor that counts for good in connection with the general level of prices.

## SECURITIES RESTRICTIONS RELEASED

On January 16, Sir Henry Drayton, finance minister, announced that the voluntary "embargo" on the import of securities from abroad should cease. This follows the release of Victory bonds from control on November 29 last, and concludes government interference with the security market as a whole. Sir Henry Drayton said:—

"There seems to be a great deal of misconception as to the so-called embargo. Embargo, in fact, there never was. The only action taken was to point to those interested in this particular business the adverse effect upon our exchanges of a large amount of these securities being brought in at the time the movement was under way, and agents, brokers and banks were asked as to whether it would not be better to keep Canadian money in Canada for the purpose of Canadian business when it was so sorely needed. The conclusion they came to was that the money should be kept at home.

"Conditions have since improved, and many of those who were perfectly willing to do their best to conserve the country's finances are of the opinion that the necessity no longer exists. The arrangement was never forced and was not a matter of government or legal control. In view of the changed attitude of many brokers, it is not thought advisable to continue the work of the voluntary committees any longer, and they have been dissolved."

In commenting on this action, E. Gordon Wills, president of the Toronto Stock Exchange, said:—

"The finance minister is to be commended for his action in removing the embargo on securities. The time has long passed when a financially sound country like Canada should have to resort to artificial props. The members of the stock exchange have never believed in the soundness of the principles involved, but have nevertheless loyally stood behind the finance minister in his efforts to enforce the embargo. The relief is a welcome one. I am sure the effect on public confidence will prove to be just as satisfactory as has been the case in the recent relisting of Victory bonds."

## FOREIGN EXCHANGE AND THE SECURITY MARKET

THAT foreign exchange rates had already worked their influence on the Canadian security market, in spite of the government's effort to prevent the importation of securities, is shown by the fact that the removal of this "embargo" has not produced any noticeable change during the past week. Even the fixing of Victory bond prices, which was a more effective measure of control, was found during the early days of December to have been an unnecessary restriction, and now Victory bonds are nearly all at higher levels than they were during the last days of price fixation. Uncertain factors affecting securities are sufficiently numerous already to vex investors, without the added difficulty of arbitrary control, attended by sudden changes of price. In emphasizing the fact that the embargo was never more than a voluntary measure, Sir Henry Drayton practically admits its futility, and has obviously changed his attitude since in October last he warned the bond-runners that they might be black-listed, and intimated that the restrictions might, if necessary, take the form of legislation at the next session of parliament.

There has, during the past few weeks, been a general strengthening of bond prices in the principal markets, which, coupled with an improvement in foreign exchanges, has removed the fear of further declines in Canada. Scarcity of new issues also indicates that borrowing governments, municipalities and corporations at last realize the folly of capital expenditures at present inflated costs, especially when extraordinarily high interest had to be paid on the money so borrowed. Even the New York market, in spite of the high premium on funds secured there, is, it is now realized, one to be avoided, for the excessive volume of financing there has meant the creation of a factor which will for many years to come operate towards a high rate for New York exchange.

The outstanding feature of the present bond situation in Canada is the scarcity of offerings, and it is expected therefore, that there will be a substantial movement of

securities from Great Britain to this country. Several bond houses have representatives or connections there, and active steps are being taken to show the British holder the advantages that can be offered. So long as sterling remains around its present levels there should be plenty of these arbitrage transactions. Another factor which should be kept in mind, in considering the relation of foreign exchange to security prices, is the fact that if the New York premium comes down many of the bonds which have been sold in the United States may come back on this market, as it was the exceptionally high yields obtainable, not any great love for Canadian securities, which induced American buyers to invest, or rather to speculate, in our securities.

## A "STAND PAT" POLICY NOW IMPOSSIBLE

"WHAT we have we'll hold," has been adopted by American labor as its policy in relation to the present movement of reduction in prices and in costs of production. But whatever ideal may be set up, the reality of the present tendency cannot be overlooked. As prices come down the margin of producing profit is reduced, and in some cases has disappeared. When this takes place the manufacturer's only alternative is to shut down. Producers of raw and manufactured goods made large profits on the up-grade, but the losses which have been experienced during the short period of price reductions have already been substantial.

Among the first to suffer were the farmers, just as they were among the first to benefit during the early years of the war. Then they enjoyed low costs and high prices; now they face high costs and low prices. Manufacturers are in a similar position, and already financial statements of industrial concerns are showing reductions in profits, while the increase in the number of failures bears witness to the effects of business depression on merchants and on the smaller manufacturers. Labor on the other hand suffered from the rise of prices, while the loss to salaried workers, investors and others with more or less fixed money

income was still more severe, as they were not well organized to meet the situation.

A considerable amount of unemployment already proves that production costs are not in line with the new price levels which are daily being established. This is a condition which will no doubt be experienced throughout the whole period of readjustment, but once the permanence of the downward movement is realized it will be recognized that all interests must fall into line. Doubled incomes cannot be maintained in the face of a price movement which bids fair to carry us back to pre-war days. Profits, interest and wages must come down as part of the new movement.

#### LONG-TERM FINANCING IN GREAT BRITAIN

**R**ENEWED activity in the British security markets, apart from government loans, is indicated by the London Joint City and Midland Bank's estimate of capital issues in 1920. These compilations of issues of new capital exclude all borrowings by the British government, shares issued to vendors, allotments arising from the capitalization of reserve funds and undivided profits, issues for conversion purposes, and loans by municipalities and county authorities, except in cases where there is a specified limit to the total subscription. The figures in all cases are based upon the prices of issue and are as comprehensive, as possible. They do not include issues of capital made by private companies except where such information is made public.

#### NEW CAPITAL ISSUES\* IN THE UNITED KINGDOM BY MONTHS

	1917.	1918.	1919.	1920.

Year ....	£26,436,999	£65,329,551	£237,541,363	£384,210,818

\*Excluding British government loans.

That this activity is largely industrial is shown by the following:—

#### CLASSIFIED DISTRIBUTION OF NEW CAPITAL ISSUES\* IN THE UNITED KINGDOM BY YEARS

Year to Dec. 31.	Government, municipal and railway loans.	Industrial undertakings of all kinds.	Total.
1911 .....	£108,452,000	£ 83,837,000	£192,289,000
1912 .....	93,404,000	113,732,000	207,136,000
1913 .....	153,789,000	88,350,000	242,139,000
1914 .....	140,128,000	59,500,000	199,628,000
1915 .....	77,745,000	5,237,000	82,982,000
1916 .....	29,491,000	5,252,000	34,743,000
1917 .....	15,071,000	11,366,000	26,437,000
1918 .....	25,769,000	39,561,000	65,330,000
1919 .....	17,244,000	220,296,000	237,540,000
1920 .....	75,056,000	309,155,000	384,211,000

\*Excluding British government loans.

Canada is therefore not the only country which experienced a revival in industrial financing in 1920; the movement is widespread, and represents in large degree financing which had been postponed because of war conditions.

#### INDUSTRIES' FINANCES MUST BE SOUND

**R**EOrganization of their business program to meet changing conditions has occupied the attention of a good many firms during the past few weeks. A feature of the work has been the wiping out or wiping off, or erasing from memory—whatever phrase suits best—of overhangs or adverse items that were handed down from the strenuous days of war. Many of these matters could not possibly have consideration in the warp and woof of business as it is being shaped to-day, and are best forgotten. At the same time firms who have the right perspective are strengthening their sales forces and selling equipment, for all are agreed that strenuous and more competitive days are ahead—if they have not already arrived.

"To wipe these things off and forget about them, so as to start anew with a clean slate, is the only business-like method," said B. J. McCormick, of the Canada Forge, Welland, recently. "There is a handicap in leftovers, and the same, it seems to me, applies to conditions confronting the dealer as well as the manufacturer. Cash on hand is more useful to the dealer than shelves full of stagnant stock, bought at prices which the public will not meet, for ready money makes possible the purchase of new goods at present values and puts the merchant on an up-to-date selling basis. There is sometimes better strategy in taking a loss than in sitting tight. A strategic loss nowadays seems to be essential to the most effective offensive."

Mining production in Canada in 1920 is valued at \$200,000,000. This is an increase of over \$23,000,000, compared with 1919, but is still far below the output which our resources warrant. \* \* \* \* \*

Imports into Canada in December were \$13,000,000 less than in November. While the "buyers' strike" has affected the volume of foreign as well as of domestic business, this decrease is in part due to lower valuations of goods imported. \* \* \* \* \*

A bill introduced into the French Chamber of Deputies proposes prohibitive taxation on branches of foreign banks. A worse blow at French foreign trade could scarcely be dealt than the passing of such a measure, shutting off the most direct and economical method of settlement. \* \* \* \* \*

The improvements in the condition of the government's finances, as shown in the monthly statements issued, help the security market more than did the embargo and the control of Victory bond prices. \* \* \* \* \*

A reduction in wholesale prices from 304.2 in November to 290.5 in December, these figures being percentages of the average from 1890-1899, shows that prices can come down just as rapidly as they went up. Moreover, the movement may go just as far. \* \* \* \* \*

#### ANOTHER U-BOAT FALLACY

In the London market where oil shares are dealt in one can usually hear the shrill cries of the traders as they shout "Scottish," "English," or "Romans." These names refer to the shares of the Scottish-American Oil Co., English Oilfields and Rumanian Consolidated Oilfields, respectively.

A passing stranger recently asked a bystander what submarine company was being traded in in that market.

"None that I know of," said the bystander. "Why? Want to buy?"

"Oh, no," said the stranger, "but I hear them yelling 'U-Boats' and just wanted to know what company it was."

"Oh, that's United British Oilfields of Trinidad."

The stranger scratched his head and passed on.

## PERSONAL NOTES

J. E. McKenna, who has been with the Montreal Stock Exchange firm of Redpath and Company for a number of years, has been admitted to partnership.

L. K. File, assistant actuary of the Canada Life Assurance Company, has been appointed to supervise the preparation of a civic pension scheme of the city of Toronto.

Oliver E. Hurd, until recently manager of the New York offices of the Royal Securities Corporation, has joined the sales organization of Nesbitt, Thomson and Company.

A. M. Macrae, of the investment house of R. C. Matthews and Company, Toronto, has been elected a member of

of the local stock exchange. The company purchased a seat on the exchange some time ago. Mr. Macrae has been with the company for twelve years. A statement regarding the future policy of R. C. Matthews and Company remarks: "Our object in buying the seat is to place at the disposal of our clients throughout the country the best facilities for buying and selling Victory bonds and other listed investment issues. We shall continue our policy of dealing

in the best investment securities and underwriting whole issues, particularly government and municipal bonds. It is not our intention to encourage speculation, or to accept margin accounts."

J. H. Ashdown, of the J. H. Ashdown Hardware Company, of Winnipeg and at one time mayor of that city, has been elected president of the Western Canada Colonization Association.

Major H. E. Boorman, who has been manager of the bond department at the Vancouver office of the British-American Bond Corporation, has been transferred to the Victoria office, where he will act in a similar capacity.

H. A. Richardson, general manager of the Bank of Nova Scotia, accompanied by W. D. Ross, a director of the bank, will leave at the end of this month for a tour of inspection of the branches of the bank in Cuba and Jamaica. Mr. Richardson will also visit Mexico.

Manuel Riconda, president of the Czarnikow-Riconda Sugar Company, of New York, one of the largest sugar firms in the world, and president of the Cuba Cane Corporation, and W. A. Hobbins, of the English sugar firm of Edward Grey and Company, Liverpool and London, have been added to the directorate of the Atlantic Sugar Refineries, Limited. With the acquisition of these two directors the Atlantic Sugar Company acquires the advice and co-operation of an expert in the raw material market, and an expert in the export market who are among the leading men in the world in their line of business, an acquisition that the Canadian enterprise should greatly benefit from.

## OBITUARIES

W. C. Parmalee, at one time deputy minister of trade for the Dominion, died at his home in Ottawa last week, at the age of 88 years. During the course of his long official career he was one of the most widely-known members of the Dominion public service, which he entered as chief clerk and accountant of the department of customs in January, 1876, when the Mackenzie Administration was in power. He was appointed assistant commissioner of customs January, 1885, and commissioner of customs March 1, 1892. On the creation of the new department of trade and commerce at the beginning of 1893, he was appointed first deputy minister of the department. He continued to hold this post until August 1, 1908, when he retired on a pension.

Sir William Gage, philanthropist and businessman, died at his home in Toronto this week, at the age of 71 years. He was especially known for his work amongst the consumptives in this country, although his charitable efforts were not by any means confined to this one great work. In his earlier days he was a school teacher, and later was engaged in the publishing business. He was president of the Toronto Board of Trade in 1911, and organized and was first president of the Associated Boards of Trade of Ontario. In business circles, he was known more especially for his connection with the Educational Book Company, of Toronto, as president, president of the Kinleigh Paper Mills, St. Catharines, Ont., a director of the Imperial Bank of Canada, and vice-president of the Chartered Trust and Executor Company.

## ROYAL BANK EXECUTIVE DISCUSSES TRADE SITUATION

At the annual meeting of the Royal Bank of Canada in Montreal this week, the trade situation, both in the retrospect and prospect, was discussed. The views expressed were optimistic, although the facts were not ignored, and coming as they do from the executive heads of an institution participating so largely in the development of the domestic and foreign trade of the Dominion, are of especial interest. C. E. Neill, general manager, dealt with the growth and development of the bank. The details have already been reviewed in *The Monetary Times*. Sir Herbert S. Holt, president, in his address remarked:—

"The position of Canada is fundamentally sound. Considering the times, we are a fortunate people. No nation has escaped the aftermath of the war, and throughout the world there is disturbance or unrest. In China famine spreads desolation, confusion and terror reign in Russia, while Europe is grappling with complex problems. Even in progressive Japan, industry is paralyzed. Contrast this with our condition. Our crops are the most valuable in our history, even at the reduced prices obtainable; bank deposits have doubled since 1913; most merchants have set aside reserves in the years of plenty to tide them over a lean period, and a great part of the bonded indebtedness of the country is held within the Dominion. Moreover, our friendship and cordial relations with our neighbor render unnecessary the expenditure for armaments which is strangling Europe. Unemployment is less, and business failures are fewer, comparatively, than in the United States, and when our war liquidation is over, we should be among the first to enter upon a new era of stable prosperity."

## MERCHANTS FIRE EXPENSE RATIO

The expense ratio of the Merchants Fire Insurance Co. for 1920 was 34.7 per cent., not 37.4 per cent. as was wrongly printed in these columns last week.

## THE STERLING BANK OF CANADA

A feature of our "Personal Service" policy is the fact that, like all matters in which personal attention is enlisted, it improves in efficiency as time progresses.

## POTATOES, ROOTS AND FODDER CROPS

### Output Greater Than in 1919—Progress of Work on 1921 Crops

THE year 1920 was better than its predecessor in respect of production of potatoes, roots and fodder, according to figures of the Dominion Bureau of Statistics issued recently. On the same date good progress on ploughing and sowing for the 1921 fall wheat crop was reported.

#### Potato Harvest of 1920

The potato harvest for the whole of Canada is represented by 138,527,000 bushels from an area of 784,544 acres, as compared with 125,574,900 bushels from 818,767 acres in 1919. The average yield per acre for 1920 is 176½ bushels, which compares with 153½ bushels last year, and with 146 bushels, the decennial average for the period 1910-19. By provinces the yield per acre of potatoes is well over the decennial average throughout the maritime provinces, Quebec and Ontario. In the western provinces the yield per acre is below average for Manitoba, Saskatchewan and British Columbia, but is above average for Alberta. In Manitoba the potato season has been particularly poor, and the average yield per acre is only 91 bushels, as against 126 bushels last year, and 150 bushels, the decennial average. In Saskatchewan the yield is 127½ bushels, as against 170 bushels last year, and 148¾ bushels, the decennial average. In Alberta the yield is 166 bushels, as compared with 179¾ bushels last year, and 161½ bushels, the ten-year average. In British Columbia the production has been greatly reduced through excessive rainfall during September and October, and the average yield is 184¾ bushels per acre on the sown area, as compared with 170 bushels last year, and 204¼ bushels, the ten-year-average. The total value to farmers of the potato crop for Canada is estimated at \$134,693,000, as compared with \$118,894,200 in 1919, the price per bushel ranging from 65 cents in Prince Edward Island to \$1.39 in Manitoba. For Canada the average price per bushel is 97 cents, as against 95 cents last year; for Quebec it is 93 cents, as against 85 cents, and for Ontario it is 96 cents, as against \$1.37.

#### Root and Fodder Crops

The total yield for Canada of turnips and other roots is estimated at 114,081,000 bushels from 290,286 acres, as against 112,288,600 bushels from 317,296 acres in 1919. The average yield per acre for the Dominion is 393 bushels, as compared with 354 bushels last year, and with 352¼ bushels, the average for the ten years 1910-19. Hay and clover yield 13,378,800 tons from 10,379,292 acres, as compared with last year's record total of 16,348,000 tons from 10,595,383 acres. The yield per acre this year is 1.30 ton, as compared with 1.55 ton last year, and 1.50 ton, the decennial average. Alfalfa yields 616,700 tons from 238,556 acres, as compared with 494,200 tons from 226,869 acres last year, the yield per acre being 2.60 tons, as against 2.20 last year, and 2.40 tons, the ten-year average. Fodder corn shows a yield of 5,404,000 tons from 588,977 acres, an average of 9.15 tons, as against 9¾ tons last year, and 8.85 tons, the decennial average. The total yield of sugar beets is 314,000 tons from 36,288 acres, as compared with 240,000 tons from 24,500 acres in 1919, an average of 8.65 tons, as compared with 9.80 tons last year, and 9.10 tons, the ten-year average. The total area under root and fodder crops, including potatoes, turnips, etc., hay and clover, alfalfa, fodder corn and sugar beets, amounts to 12,317,943 acres, as compared with 12,494,584 acres in 1919. The total value of these crops, at local prices paid to farmers, amounts for 1920 to \$584,634,500, as compared with \$560,151,800 for 1919. The average price per ton for hay and clover for Canada is \$25, as against \$20.72 last year, the price for 1920 constituting the highest on record.

#### Fall Wheat and Fall Ploughing

The total area sown to fall wheat in Canada for the season of 1921 is estimated to be 792,200 acres, as compared with 846,800 acres, the area sown in 1919 for 1920, and with 814,133

acres, the area harvested. This is a decrease of 54,600 acres, or 6 per cent., from the area sown, and of 21,933 acres, or 3 per cent., from the area harvested. In Ontario the area sown is 738,500 acres, as compared with 794,100 acres, a decrease of 7 per cent. In Alberta there is an increase sown of from 38,400 acres to 38,800 acres, or 1 per cent. In British Columbia the acreage is 14,900, as against 14,300, an increase of 600 acres, or 4 per cent. The crop is reported as having made good growth, its condition on October 31 being given, in percentage of the decennial average, as 102 for all Canada, 102 for Ontario, 98 for Alberta, and 104 for British Columbia.

On the whole excellent progress has been made this fall in the ploughing of land intended for next year's crops. In the maritime provinces the percentage ranges from 57 in Nova Scotia to 81 in Prince Edward Island, only Nova Scotia falling behind the proportions of the two previous years. In Quebec the percentage fall-ploughed is 88, as against 87 last year, and 62 in 1918. In Ontario 73 per cent. has been ploughed, as against 77 per cent. last year and 64 per cent. in 1918. In Manitoba the excellent proportion of 83 per cent. was reached, which compares with 64 per cent. last year, 54 per cent. in 1918, and 40 per cent. in 1917. Saskatchewan accomplished 45 per cent., or nearly half, this proportion being larger than in any year since 1914, when it was 77 per cent. In Alberta the proportion is 29 per cent., as against 34 per cent. last year, and 35 per cent. in 1918. In British Columbia 65 per cent. has been ploughed, as against 56 per cent. last year, and 48 per cent. in 1918. For the whole of Canada the percentage is 71, as against 66 last year, this year's percentage being larger than in any year since 1914, when the same percentage of 71 preceded the bumper harvest of 1915. The amount of land which it is possible to plough in the fall has usually an important bearing upon the next year's harvest, so that the prospect to this extent is favorable.

## SHADOWS SHOULD NOT BLIND US

In his address at the annual meeting of shareholders of the Bank of Hochelaga, Beaudry Leman, general manager, referred to the transition from a condition of almost universal war to one of partial peace and to the outburst of extravagance and pleasure-seeking that followed, reducing normal production. This quickly brought recognition of the fact that credit could not alone support the economic structure of the world, and that hard work must really be its sustaining power. He added that in view of the vastly superior means of production it is reasonable to hope that the wastage of war will be repaired in a no-distant future.

Mr. Leman reviewed to some length the growth of the various industries and trade, etc., dwelling particularly on the achievements of the province of Quebec, and in conclusion remarked:—

"This cursory examination of conditions, if it discloses some shadows, should not blind us to the many redeeming features which will fully develop provided we are willing to face the difficulties which confront us and do not leave their solution to future generations. The perusal of financial reviews and publications dealing with economics creates much the same impression as is derived from reading, without sufficient preparation, a medical book; one discovers that he is afflicted with all kinds of diseases, many of which might prove fatal. One should not forget that symptoms should not be taken separately but in relation to one another, and that mankind, like the human body, possesses wonderful and powerful vitality and means of recuperation. Canada is young and holds in abundance natural wealth which only awaits to be developed, man-power and financial backing. The program which would seem to commend itself to Canadians of all races and classes is to work hard and efficiently, not only to bear their share of public charges, not only to improve conditions of life, but also to accumulate by thrift the resources necessary to the development of their country."

The financial statement of the Bank of Hochelaga has already been reviewed in these columns.

BANK BRANCH NOTES

The Royal Bank of Canada has opened branches at Montego Bay, Jamaica; and at Layton and Danforth Avenues, Toronto. The Canadian Bank of Commerce announces the opening of a branch at Robs St., Vancouver.

The Royal Bank of Canada has purchased from the Bank of Nova Scotia Lot No. 167, fronting on 224 St. James St., Montreal, with building.

Steel contract for branch bank of Bank of Montreal at Granby, Que., has been let to MacKinnon Steel Co., Ltd., Sherbrooke, Que.

John B. Monk, formerly manager of the Bank of Ottawa at Winnipeg, has made announcement of his appointment as general agent for the province of Manitoba of the Guardian Insurance Co. of Canada.

Selby B. Mastin, who has been manager of the Royal Bank of Canada at Stratford, has been appointed manager of the branch at the corner of Yonge and College Streets, Toronto.

CANADIAN BUSINESS FAILURES

The number of failures in the Dominion, as reported by R. G. Dun and Co. during the week ended January 14, 1921, in provinces, as compared with those of previous weeks and corresponding weeks of last year, are as follows:—

Date.	Ont.	Que.	Man.	Alta.	Sask.	B. C.	N. S.	N. B.	P.E.I.	Total.	1920.
Jan. 14	13	23	4	1	3	0	0	0	0	44	14
Jan. 7	15	14	3	2	3	1	2	1	0	40	11
Dec. 31	16	7	2	1	3	3	4	0	0	36	18
Dec. 24	10	15	2	1	6	0	0	3	0	37	..

WEEKLY BANK CLEARINGS

The following are the Bank Clearings for the week ended January 20, 1921, compared with the corresponding week last year:—

	Week ended		Changes.
	Jan. 20, '21.	Jan. 22, '20.

# Mining Production Increased in 1920

Ontario Well in Lead, With British Columbia Second—The Coal Problem and its Importance—Gold Production Going Up, but Silver Output Falls Off—Manitoba's New Mining Field

By R. GOLDWIN SMITH

THE production in Canada of the more important metals during 1920 is estimated by the Department of Mines as follows: Gold, \$16,000,000 in value; silver, 13,500,000 ounces; copper, 82,500,000 pounds; nickel, 61,500,000 pounds; lead, 35,500,000 pounds; zinc, 42,000,000 pounds; pig-iron, 1,080,000 short tons; steel ingots and direct steel castings, 1,220,000 short tons. The production of these metals in 1919 was: Gold, \$15,850,000 in value; silver, 16,020,000 ounces; copper, 75,053,000 pounds; nickel, 44,545,000 pounds; lead, 43,827,000 pounds; zinc, 32,194,000 pounds; pig-iron, 917,781 short tons; steel ingots and direct steel castings, 1,030,342 short tons.

The total production of coal in Canada during 1920 is estimated on the basis of a nine months' record collected by the Dominion Bureau of Statistics at not less than 16,000,000 short tons. The production of coal in 1919 was 13,681,218 short tons.

The total value of the mineral production in Canada during 1920 is estimated at about \$200,000,000. The total value of the production in 1919 was \$176,686,390. The highest value of the mineral production obtained in any previous year was \$211,301,897 in 1918.

## Canadian Mining Industry Expanding Steadily

Previous to the opening of the present century the development of the mining industry of Canada had been comparatively small. The mineral resources of the Dominion were little known. The nickel fields of Sudbury had been discovered but the commercial value of the deposits was not realized. Neither Cobalt nor Porcupine had been discovered. Since 1900 the industry has grown by giant strides, and this can be no better demonstrated than by giving production figures over a period of fifty years:—

	Metallic	Non-metallic	Total value
1889	\$3,251,299	\$10,762,614	\$14,013,913
1899	19,651,182	29,582,823	49,234,005
1909	44,156,841	47,674,600	91,831,441
1914	59,386,619	69,476,456	128,863,075
1918	114,549,152	96,752,745	211,301,897
1919	73,262,793	103,423,597	176,686,390
1920 (est.)	.....	.....	200,000,000

Canada's chief products at the present time, in the order named, are coal, nickel, gold, copper, silver and asbestos.

## Ontario Leads Provinces

In the aggregate value of production from the mines Ontario leads the other provinces by a large margin, and has led the way for a number of years. Its ascendancy is due to the rich silver, gold and nickel-copper deposits in northern Ontario. British Columbia, which ranks second, contributes chiefly copper and coal, while Nova Scotia comes third with its coal and iron, and Alberta, with its almost unlimited coal resources, as yet for the most part unexploited, stands in fourth place. Quebec, which is in fifth place, is distinguished for its asbestos mines. Mineral production by provinces during the year 1918 and 1919 was as follows:—

	1919	1918
Ontario	\$65,842,826	\$94,694,093
British Columbia	34,258,267	42,835,509
Alberta	20,815,049	23,109,871
Quebec	21,341,829	19,605,347
Nova Scotia	23,213,751	22,317,108
Manitoba	2,846,565	3,220,424
Yukon	1,963,965	2,355,631
New Brunswick	1,675,606	2,144,017
Saskatchewan	1,118,055	1,019,781

When referring to the minerals that Canada has to import, such as oil, it must be borne in mind that this country has great wildernesses as yet unexplored. The country has to import most of its iron ore, but the chief source of supply is Newfoundland, the iron mines of which are controlled by Canadian and British capital.

## Our Mineral Wealth

But in other directions this country's minerals are very rich. Canada contributes 80 per cent. of the world's nickel supply; the asbestos deposits of Quebec are greater than those of any other country; while the iron and coal deposits of Newfoundland are among the largest in the world. For many years Canada has ranked third as a silver producer, while its gold mines which are being developed in various parts of the Dominion are increasing steadily in importance.

## Oil and Coal Deposits

News of great interest has come from northwestern Canada regarding the success of the Imperial Oil Company in bringing in what appears to be a rich oil well at Fort Norman on the Mackenzie River. While the discovery is too far away to be of commercial value for some years to come, nevertheless should a rich reservoir of oil be proved to exist in the Mackenzie area the time will not be far distant when it will be tapped to supply the increasing needs of the world. While the oil fields of western Ontario are supplying a fair volume of oil, and Alberta fields have grown in importance, the contribution of Canadian fields is small as compared with the country's requirements. Over 90 per cent. of the quantity used is imported, the amount produced in Canada being 8,435,000 gallons, as against 451,211,000 gallons imported. The vital importance of finding and developing oil fields in this country is thus demonstrated.

In view of the serious shortage of coal in central Canada and the dependence of Ontario on the United States for supplies it seems an anomaly to state that in eastern and western Canada one-sixth of the world's known coal deposits are located. Some day, perhaps before long, economic conditions will force the people of this country to organize in such a way that Canada will not be left hopelessly dependent on outsiders, at least for coal.

The approximate production of the leading minerals of Canada in 1919 and 1918 was as follows:—

	Value—1919	Value—1918
Copper	\$14,041,549	\$29,163,450
Gold	15,858,749	14,687,875
Pig iron	899,406	1,204,703
Lead	3,057,788	4,055,779
Molybdenite (exports)	84,228	434,528
Nickel	17,817,953	36,830,414
Silver	17,418,522	20,597,540
Zinc	2,328,998	2,746,620
Asbestos	10,658,946	8,936,805
Coal	54,051,720	55,752,671
Mica	273,305	268,373
Natural gas	4,071,572	4,370,622
Petroleum, crude	744,677	866,554
Salt	1,308,407	1,285,039

## Ontario Gold Exceeded Silver

An outstanding feature of the year 1920 in the mining industry of Ontario was the fact that for the first time since 1903 (when silver was first discovered in Cobalt) the value of gold produced exceeded that of silver. The change was due in part to the continued decline in silver output, but also in part

## Strong Convincing Evidence

THE value of Imperial Lubricants is best measured by the results they give. Bigger output, steadier and longer service from machinery, lower operating expense—all are made possible by their regular use.

In the accompanying list there is a right grade of oil for any make of machine and every moving part. All grades are of the same high quality. Carefully formulated to give dollar-for-dollar lubrication.

The success of countless Canadian industries is closely tied up with Imperial Lubricants. These testimonials from representative firms speak for themselves.

### Entirely Satisfactory

*We have been using Imperial Lubricants for several years. We are entirely satisfied with their quality, and the service could not be improved upon.*  
—Vancouver Lumber Co. Limited.

### A Grade for Every Need

*We have found Imperial Lubricants perfectly satisfactory and of very high grade. The fact that your company makes such a large line of lubricating oils has enabled us to make proper selections for the different machines we have to lubricate.*  
—Garden City Paper Mills Co.

Imperial stocks are always available. Imperial Engineers will gladly advise you regarding lubrication. Write to 56 Church St., Toronto.

Five Canadian Refineries

Branches In All Cities

to the fact that the gold-mining industry is expanding steadily. While some of the silver mines of northern Ontario appear to have many productive years ahead, it is evident that the future lies with the gold mines and the nickel-copper fields.

While final figures for the year 1920 have not been compiled yet, the approximate gold production of Ontario amounted in value to \$12,500,000, as compared with \$10,451,683 in 1919. The output in silver totalled \$10,600,000, as against \$12,913,316.

The aggregate output of metalliferous mines of the province in 1920 was approximately \$46,000,000, an increase over 1919 of about \$5,500,000, but a decrease as compared with the banner year 1918 of \$20,000,000. The total mineral production for 1920 was approximately \$67,000,000, an increase of \$9,500,000, but a decrease of over \$13,000,000 in 1919 from 1918. In view of the substantial manner in which the mining industry is developing now, it may be anticipated that rapid strides in the production, especially of gold, nickel, copper and iron, will be made during the next five years.

The nickel-copper mines contributed more to the total output in 1920 than any other class; the total for nickel being \$15,700,000, as compared with \$11,971,931 the year before. Copper production decreased by half a million to \$3,161,616.

The substantial increase in the production of mines in 1920 was due chiefly to the growth in nickel output, the sharp decline in silver offsetting the increase in gold output. Increases were recorded in pig iron, cobalt and platinum, while decreases were shown in the production of lead and copper. The following table gives the approximate output from the more important classes of metalliferous mines in the province, with comparisons with 1919 and 1918:—

	Value—1920	Value—1919	Value—1918
Gold .....	\$12,519,109	\$10,451,688	\$8,502,480
Silver .....	10,661,759	12,913,316	17,415,882
Cobalt .....	822,324	916,337	1,688,477
Nickel .....	15,700,000	11,971,931	27,840,422
Lead (pig) .....	142,012	90,490	149,841
Copper .....	3,161,616	3,708,596	8,532,790
Pig iron and iron ore...	1,429,642	1,248,384	1,989,100

#### Gold on the Increase

The gold-mining industry of the province is comparatively new but some of the hidden secrets of the mines are gradually being disclosed. The leading properties have been developed to great depth, the Hollinger and McIntyre shafts being down below 1,200 and 1,400 feet respectively. A favorable aspect of the mines as greater depth is attained is that ore bodies become more consistent and values increased. The sheared zones in all the gold camps that have been developed are close to the perpendicular, and geologists express the belief that values will be maintained as far down as the mines can be worked on a commercial basis. The same conditions appear to exist not only in Porcupine, but also in Kirkland Lake, Boston Creek and West Shining Tree.

In 1920 the Hollinger Consolidated produced close to \$7,000,000 in gold, while the McIntyre contributed over \$2,000,000 and the Dome close to \$2,000,000. Porcupine Crown, Dome Lake and Davidson Consolidated produced smaller amounts. The first three named and the Davidson Consolidated, a newer property, have built up large reserves of ore, while all of the gold properties are as yet in the early stages of development.

In the Kirkland Lake camp, which is younger than Porcupine, rapid progress has been made. The camp has made good. Three properties, the Lake Shore, Kirkland Lake and Teck-Hughes are steady producers, and several other properties will join the list shortly, including the Wright-Hargraves and Tough-Oakes.

At the present time the list of dividend-payers in the gold camps is small. Hollinger paid 8 per cent. in 1920, McIntyre 15 per cent., Dome 10 per cent., and Lake Shore 10 per cent.

A favorable recent development in gold mining in the province has been several large mergers. To be a permanent success gold mining must be carried on a big scale and a large output demands big ore-bearing areas. The Davidson Gold Mines amalgamated with several adjacent properties which carry the same general ore bodies, the merger being

known as the Davidson Consolidated Gold Mines. The control of the merger has virtually been sold to a syndicate of strong English capitalists. Another English syndicate has secured control of a merged group of properties in Kirkland Lake camp, including the Tough-Oakes, Burnside and probably the Sylvanite; also the Aladdin-Cobalt, which controls the Chambers-Ferland mines in Cobalt. The new English company is known as the Kirkland Lake Proprietary 1919, Ltd. The Dome Mines have taken control of the Dome Extension Mines, which has added materially to the company's resources.

#### Silver Mines on Decline

While the output and ore reserves of the Nipissing Mines in Cobalt are on the decline, this leading producer of the famous silver camp is still paying dividends at the rate of 30 per cent. per annum. The McKinley-Darragh maintains its dividend at 12 per cent. per annum and its ore reserves are being fairly well maintained. The Coniagas Silver Mines is paying dividends at the rate of 10 per cent., while the Mining Corporation of Canada pays 50 cents per share per annum. Other properties, including the Beaver, Crown Reserve, Kerr Lake, La Rose and Temiskaming, have been contributing to the production of the camp in a lesser degree. Developments in the Gowganda silver camp are more promising, the Castle property, owned by the Trethewey Company of Cobalt, having been added to the list of shippers.

From a stock market standpoint the precious metal mines of Ontario have been neglected during most of the year. The exploitation of the gambling instincts of the public in the past is largely responsible for lack of interest in mining stocks. This is unfortunate, as the gold camps are developing valuable properties, largely with outside capital.

The International Nickel Company, which with the British-American Nickel Corporation largely controls the known nickel-copper deposits of the Sudbury district, had an unfavorable year in 1919, but showed better results in 1920, due to an improved market for its chief product. The deposits of the International Company are known to contain some 20,000,000 tons of ore, sufficient to supply the company's requirements for many years to come.

#### The Asbestos Industry

The asbestos industry in Quebec has been making substantial headway due to an increasing demand for the mineral. The Asbestos Corporation of Canada, which is the leading producer, has a daily capacity of 4,500 tons. The asbestos of the mines, while short, is flexible and strong and its uses are increasing. Most of the world's available supply of asbestos comes from Quebec.

#### British Columbia Mining

Mining and lumbering are the two chief industries of British Columbia, and mining has developed rapidly in late years. Copper, gold and coal are the chief products, and the bulk of the province's output of copper comes from the smelters of the Consolidated Mining and Smelting Co., in which the C. P. R. has a heavy interest, and the Granby Consolidated Co., which is controlled largely by United States capital. The first-named company has the distinction of producing copper, lead, zinc, gold and silver. The output of British Columbia mines fell off sharply when the war came to an end but production is now on the increase again.

#### Manitoba's Mining Areas

This review must not close without a brief reference to the newly-developed mineral fields of northern Manitoba, chiefly copper and gold. It is estimated that the Flin Flon copper mine, with 24,000,000 tons of ore in sight, will develop into one of the most important properties in the Dominion.

The Motor Union Insurance Co., Ltd., which for over a year has been writing automobile business as a non-tariff company, has joined the Canadian Automobile Underwriters' Association.

# Canada's December Purchases Abroad Reduced

Trade Statement Shows Decrease in Imports of Nearly Thirteen Millions—Exports Slightly Increased—Sales of Animal Products Decline While Agricultural and Vegetable Products Advance—Adverse Balance Has Fallen to Twenty-Eight Millions

IN the December trade statement which has just been published by the Department of Customs, the continuance of the tendencies which developed earlier in the year are shown. Exports show an increase of less than \$2,000,000, as compared with November, but the principal change is in imports, which show a reduction of nearly \$13,000,000 for the month.

There were only two important changes in export figures. Agricultural and vegetable products sent out of the country increased by slightly more than \$6,000,000, while on the other hand animal and animal products declined more than \$3,000,000. Exports of the last-mentioned commodities are only half of what they were in December, 1919, while

agricultural and vegetable products have increased by a similar percentage.

All imports, with the exception of iron and steel and non-metallic minerals, show reductions for the month. Fibres and textiles show the principal decline of \$3,000,000.

A continuance of the tendencies manifested in the past three months would fulfil prophecies of those who have predicted a favorable trade balance for Canada for the fiscal year ended March, 1921. The adverse balance at the end of December was only \$28,414,478, as against a figure of \$164,000,000 at the end of September, 1920.

Details of the December statement and for the nine months of the fiscal year, together with comparisons, follow:—

# NOTICES

## ONTARIO PULP AND PAPER COMPANY, LIMITED

Incorporated under the laws of the Province of Ontario

To the Holders of Six Per Cent. First Mortgage 30-Year  
Gold Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 7 of a Supplemental Mortgage dated the 13th of January, 1915, made between The Spanish River Pulp and Paper Company, Limited, and The Royal Trust Company, the holders of the various bonds mentioned in said clause including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 7 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and/or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1¼% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage 30-Year Gold Bonds their proportion of said Preference Shares under said Clause 7, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to The Royal Trust Company, 59 Yonge Street, Toronto; or The Royal Trust Company, Montreal, Quebec; or Agents of the Bank of Montreal, 64 Wall Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or The Bank of Montreal, 47 Threadneedle Street, London, E.C., England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

THE ROYAL TRUST COMPANY,  
Trustee.

Toronto, November 24th, 1920.

## THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED

Incorporated under the laws of the Province of Ontario

To the Holders of Six Per Cent. First Mortgage Sinking  
Fund Gold Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 7 of a Supplemental Mortgage dated the 20th of January, 1915, made between The Spanish River Pulp and Paper Mills, Limited, and the Montreal Trust Company, the holders of the various bonds mentioned in said clause including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 7 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and/or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1¼% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage Sinking Fund Gold Bonds their proportion of said Preference Shares under said Clause 7, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to the Montreal Trust Company, 61 Yonge Street, Toronto; or The Montreal Trust Company, Montreal, Quebec; or The Agency The Royal Bank of Canada, 68 William Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or Montreal Trust Company, 2 Bank Buildings, Princess Street, London, E.C.2, England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

MONTREAL TRUST COMPANY,  
Trustee.

Announcement of the striking of oil by the Sparten Oil Well has started a boom in oil-drilling in all fields in the Vancouver-Fraser Valley area. The Sparten well struck oil at 1,500 ft. Contracts were let out and work started on the building of storage tanks to hold huge quantities of the crude oil as it comes from the gusher, until it is shipped away to the refinery.

The Monarch Building, 26-28 Adelaide St. W., Toronto, has been sold to the Dominion of Canada Guarantee and Accident Insurance Co. The purchase, which totals around \$200,000, was negotiated by the Provident Investment Co. The property has a frontage of 42 ft. by a depth of 80 ft. The building is of stone and brick construction and is eight stories high.

NATIONAL REVENUE INCREASED IN DECEMBER

WHOLESALE PRICES CONTINUE DOWNWARD

Expenditures Substantially Decreased—Income and Business Profits Taxes Produce Good Results

Index Number For December Dropped to 290.5—Nearly all Classes of Commodities Showed Declines

THE financial statement of the Dominion government for December shows that revenue increased from \$39,517,313 at the end of November to \$48,260,393. Income tax with an increase of close to \$9,000,000 and business profits tax with an advance of about \$3,500,000 are the principal changes, and are responsible for the revenue showing. At the same time ordinary expenditures decreased by nearly \$11,000,000.

FURTHER substantial declines in wholesale prices are reflected in the December statement of index numbers as prepared by the Department of Labor. The index number for that month fell to 290.5 as compared with 304.2 in November; 322.7 in December, 1919; 288.8 in December, 1918; 251.7 in December, 1917; 137.6 in December, 1914; and 137.1 in December, 1913.

The revenue and expenditure account for the nine months ended December 31, 1920, stands out very favorably, as compared with last year. Expenditure on capital account is also less burdensome, as a result of greatly reduced disbursements for war and public works. Details with comparisons, are shown in the accompanying table:—

By groups, all classes of commodities showed declines, with the exception of dairy products and house furnishings. The former increased from 322.1 in November to 340.0 in December, while the latter was stationary.

The following table gives the details for December with comparisons:—

### AUDITORS' CERTIFICATE

We beg to report to the Shareholders of the Banque d'Hoichelaga that in accordance with Section "56" of the Bank Act, we have checked the cash and verified the securities of the Bank at the Chief Office as at November 30th, 1920, as well as at another time during the year, and found they agreed with the entries in the books in regard thereto.

We have also examined the accounts and verified the cash and securities at some of the principal branches during the year.

We have examined the books and accounts at the Head Office and have compared the above Balance Sheet with these books and with the certified returns from the branches. In our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given us, and as shown by the books of the Bank.

We have obtained all the information and explanations required by us and, in our opinion, the transactions of the Bank, which have come under our notice, have been within the powers of the Bank.

S. ROGER MITCHELL, C.A.,  
of Marswick, Mitchell & Company,  
GEO. GONTHIER, L.F.A.,  
of Gonthier & Midgley, } Auditors.

\* The shipments for 1904 totalled 158.55 tons; for 1905, 2,336.01 tons; for 1906, 5,836.59 tons; for 1907, 14,851.34 tons, and for 1908, 25,362.10 tons.

† In addition to the shipments by this Company, the Dominion Reduction Company shipped from this mine and two others, 2,322 tons of ore, which are included in the total shipments of 15,044 tons in 1916.

‡ Absorbed by Mining Corporation in November.

## MONTREAL CLEARING HOUSE ASSOCIATION

Among the changes made at the meeting of the Montreal Clearing House on January 14, was the election of M. S. Bogert as vice-chairman, replacing J. D. G. Kippen; W. J. Finucane was elected to the committee, which now consists of H. B. Henwood (chairman), M. S. Bogert (vice-chairman), C. W. Dean, F. G. Leduc, R. L. Ritchie, H. B. Walker and W. J. Finucane. The routine business was gone through with the presentation of the high and low figures for each day, each month, etc., which showed Montreal to be the ninth city in size of clearings on the continent.

## SUCCESSION DUTIES COLLECTION

According to a report from the Quebec Provincial Treasurer's Department, the duties to be collected on the estates of the late Hon. S. N. Parent, Victor Chateaufort and William Power will amount to nearly \$100,000, being on a taxable amount of nearly two million dollars. In the case of Hon. Mr. Parent the taxes could have been collected by Quebec or Ontario, but the former province was chosen by the heirs. It is also announced that William Powers has left one year's salary to all his employees.

# UNION BANK OF CANADA IN STRONGEST POSITION IT HAS EVER HELD

**Fifty-sixth Statement Reveals Very Strong Cash Position Built Up During Past Year—Total Assets Increased \$60,000,000 Since 1916—Savings Deposits Again Show Marked Increase—Quick Assets to Liabilities Increased from 47.23 p.c. to 54.35 p.c.—There are now 393 Branches and Agencies.**

The fifty-sixth Annual General Meeting of the shareholders of the Union Bank of Canada was held at the Head Office, in Winnipeg, at twelve noon, on Monday, January 10th, 1921. Among those present in the large gathering were:—

Sir William Price, John Galt, G. H. Thomson, Stephen Haas, W. R. Allan, G. H. Balfour, Hume Blake, M. Bull, Sir John W. Carson, C.B.; E. L. Drewry, S. E. Elkin, A. Hitchcock, J. S. Hough, K.C.; F. E. Kenaston, W. H. Malkin, R. O. McCulloch, G. M. Black, D. N. Finnie, George Kidd, R. T. Riley, H. B. Shaw, J. W. Hamilton, F. W. S. Crispo, Geo. Wilson, J. S. Hiam, W. J. Dawson, H. A. Robson, C. A. Neel, L. J. F. Van Riemsdyk, Dr. Harvey Smith, John W. Ward, Max Heppner, A. R. Leonard, H. A. Mullins, J. H. Turnbull, E. F. Stephenson, Isaac Campbell, K.C.; J. B. Waddell, W. J. Christie, C. A. Adamson, W. K. C. Fisher, D. H. Blain, C. M. Scott, W. H. Williams, M. Snow, J. B. Persse, W. A. Windatt, J. A. MacLeod, P. K. Dickson, A. M. Stewart, W. W. MacMillan, F. W. Drewry, J. A. Tanner, C. D. Shepard, Jas. Fisher, K.C.; C. P. Wilson, K.C.; J. Woodman, G. A. Merrick, S. T. Hopper, J. D. McIntyre, K. F. Gilmour, N. R. Nagle, D. F. Rankine, G. S. Orde, S. E. Rae, J. Anderson, G. S. Harrison, R. H. Baird, A. A. Walcott, J. W. Millar, H. F. Forrest, E. D. McGregor, W. J. Cummings, C. R. Sanders, C. C. King, C. H. Hartney, C. MacMillan, G. F. Tweed, H. R. Tweed, Joseph Anderson, F. O. Robertson, P. Vibert, A. G. Ross, T. Craig, A. F. S. Tatum, A. J. Wilson, W. W. Barry, T. S. Fulton, J. G. Vieg, D. M. Neeve, P. D'E. Strickland, S. B. O'Connell, W. R. Bell, F. J. Willis, F. J. Boulton, E. J. Lockie, F. K. Wilson, G. R. Tinning, W. J. Swaisland, C. C. Balfour, H. C. McLean, W. Dunn, E. J. Roycroft, W. Mitham, O. F. Soeber, A. P. Nasmith, W. M. Chandler, G. T. Sewell, L. J. Elliott, W. L. Thorp, A. J. Sheard, A. G. Duncan, H. H. McKinnon, G. M. Prouf, F. W. Smith, A. B. Rowan Legg, H. A. Tubby, A. R. Jamieson, J. Cavers, W. R. Learmonth, F. C. Billingsley, E. E. Irwin, Geo. Howson, A. A. Sutherland.

On motion of Mr. Stephen Haas, the President, Mr. John Galt, took the chair.

The Chairman requested Mr. C. A. Neel to act as Secretary of the meeting, and Messrs. W. A. Windatt and F. W. Drewry as Scrutineers. (Approved.)

The Secretary read the Notice convening the meeting, which was in the following terms:—

Head Office, Winnipeg.

### NOTICE OF ANNUAL MEETING

Notice is hereby given that the Annual General Meeting of the shareholders of the Union Bank of Canada for the Election of Directors, and other General Business, will be held at the Head Office of the Bank in the City of Winnipeg on Monday, the 10th day of January, 1921. The chair will be taken at 12 o'clock noon.

By Order of the Board,  
H. B. SHAW, General Manager.

Winnipeg, November 6, 1920.

The Chairman read the Annual Report of the Directors.

### DIRECTORS' REPORT

The Directors have pleasure in presenting their report, showing the result of the business of the Bank for the year ended November 30th, 1920.

During the year 15 branches and agencies were opened, and 10 were closed, as follows:—

### Offices Opened

Province of Ontario, 6—Honeywood, Mansfield, Minesing, Oshawa, St. Anne's, Toronto (Daves and Danforth).  
Province of Manitoba, 2—Benito, McConnell.  
Province of Saskatchewan, 5—Birch Hills, Carmel, Mossbank, Pinkham, Saskatoon (West Side).  
Province of Alberta, 2—Calgary (Stockyards), Edmonton (Stockyards).

### Offices Closed

Province of Manitoba, 5—Graysville, Homewood, Margaret, Roscisle, Winkler.  
Province of Saskatchewan, 2—Kyleville, Scott.  
Province of Alberta, 3—Alcomdale, Grassy Lake, Loyalist.

The number of branches and agencies in operation at the close of business on November 30th was 393.

The number of staff employed at close of business on November 30th was 2,303.

The usual inspection of all branches and agencies has been made.

In accordance with an announcement made by him at the last Annual Meeting, Mr. R. T. Riley, Vice-President of the Bank, has recently resigned from the Board, to devote more time to his own affairs, and Mr. W. R. Allan has been elected Vice-President to succeed him.

To fill the vacancies on the Board, Mrs. G. M. Black and D. N. Finnie, of Winnipeg, have been elected Directors.

JOHN GALT, President.

### PROFIT AND LOSS ACCOUNT

Balance at credit of account, 29th November, 1919	\$ 198,222.87

<b>Report of the Auditors to the Shareholders of the Union Bank of Canada</b>		
In accordance with the provisions of sub-sections 19 and 20 of Section 56 of the Bank Act, we report to the Shareholders as follows:		
We have audited the above Balance Sheet with the books and vouchers at Head Office and with the certified returns from the Branches.		
We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.		
In addition to our verification at the 30th November, we have during the year checked the cash and verified the securities representing the investments at the Bank at its chief office and principal branches and found them to be in agreement with the entries in the books of the Bank relating thereto.		
In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of affairs of the Bank, according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.		
T. HARRY WEBB,		E. S. READ,
Auditors of the firm of		GEORGE A. TOUCHE & CO.
Winnipeg, 20th December, 1920.		
		\$169,205,445.39

H. B. SHAW, General Manager.

## Review and Forecast

### PRESIDENT'S ADDRESS

Gentlemen: It affords me very great pleasure again to meet you in Annual General Meeting.

The experience of the Bank in the financial year just closed is set forth in the statement which is now before you. Your Directors submit this statement with satisfaction. They recognize that vigilance and sound judgment on the part of the Executive throughout a difficult year materially contributed to such a good result.

I shall leave elaboration of the report, but take occasion to call attention to the material increase of our Rest Account by the addition of \$400,000.00 and to the fact of our position being such that we felt justified in declaring a cash bonus of two per cent. to our Shareholders. The transactions of the year have been satisfactory, and we are in a sound and healthy position.

### All Resources Employed

Our profits have been unusually good, owing to the fact that, with due regard to the factor of safety, all our resources were fully employed. Our profits were not made at the expense of our borrowers, for the current rate of interest charged by banks in Canada has remained practically un-

changed since 1914, and we have had more violent fluctuations and high rates from which other countries have suffered. Substantial enhancement of profits was due to the general banking facilities provided by the Bank to the community. These services became productive largely according to the measure of service rendered to their customers by the numerous Branch Managers and Staffs. In viewing the year's successful operations, due regard must be had to this valuable contribution.

The privilege of re-discounting with the Dominion Government has proved of the greatest service. It has enabled Canadian banks to take care of the country's trade throughout the period when high prices involved the employment of a vastly greater amount of capital than formerly, and to finance all legitimate requirements. This privilege does not appear to have been abused, and if continued would afford all the necessary financial elasticity for period of expansion and would be quite the equivalent of the Federal Reserve Bank system now in existence in the United States. The close scrutiny by the Department of Finance of the collateral submitted provides an ample measure of safety.

### Farming Industry

Our farming industry has on the whole been satisfactory. The crop of 1920 in the Prairie Provinces passed through many vicissitudes. An unfavorable spring resulted

in the late seeding of certain large areas, but good weather advanced the growth in a satisfactory manner. Abundant moisture was not general and, therefore, the yield in some sections of the country was light, but, on the whole, the crop was larger and of better quality than that of 1919.

In Manitoba the acreage under crop was approximately 6,350,000 acres, and the yield is the second largest in the history of the Province, and probably of greater value than any former year, the returns being as follows:—

	Bus. per acre
Wheat -----	15.1
Oats -----	33.6
Barley -----	22.3
Flax -----	6.8
Rye -----	15.7

In Saskatchewan the acreage amounted to approximately 17,000,000 acres, and the average yield per acre for 1920 shows a satisfactory advance on the previous year, and while not the best in the history of the Province, a satisfactory crop was harvested, yields being as follows:—

	Bus. per acre
Wheat -----	11.2
Oats -----	27.7
Barley -----	20.2
Flax -----	4.8
Rye -----	13.8

In Alberta the acreage amounted to approximately 7,900,000 acres. The total production will equal, if not exceed, past records, average being:—

	Bus. per acre
Wheat -----	21.50
Oats -----	38.50
Barley -----	28.00
Flax -----	8.25
Rye -----	23.75

The 1920 crop is the best since the record year 1915, but high cost of production combined with the decline in the market value of farm products, caused a heavy shrinkage in the volume of money at one time anticipated.

An open fall enabled the preparation of a large seeding area and as there was abundant moisture the spring crop should go in under favorable conditions.

#### Live Stock Industry

Turning to the live stock industry, the year has witnessed a marked shrinkage in values. In the case of cattle, sheep and hogs, price records for 1920 show a decline of practically ten cents per pound live weight between the high and low points of the market. This was apparently due to a limited demand from foreign countries and a pronounced decline in the values of by-products.

Foremost in the minds of cattle producers is the thought of the proposed duty against Canadian cattle entering the United States and its possible effect. The American market has provided such a healthy outlet for the bulk of our good feeder cattle in past years that a barrier against this market may injure our prices in Canada. Relief would be found in the removal of the British embargo and it is to be hoped that our government will not cease in their efforts in this direction. If the Canadian cattle raiser is to be confined to the Canadian market entirely, prices will be low.

Upon comparing the trade in 1919 and 1920 it is found that a total of 1,022,134 animals were marketed at the five central stock yards in western Canada during 1920 and were valued at \$51,415,176. During 1919 a total of 1,243,399 head were marketed and were valued at \$65,285,941. Comparison of the two years' statistics show during 1920 a decrease in receipts of 221,265 animals and a decline in value of \$14,240,765, as compared with 1919.

It is hoped that conditions may soon improve and give greater encouragement to this important Canadian industry.

#### Economic Conditions

Resumption of production overseas has conducted to restrict markets for Canadian products. Nevertheless, trade in Canada in 1920 was on the whole active, and there were few failures. But the strong tendency prevailing towards a falling of commodity values has become acute and a more difficult financial situation confronts us. It is, however, a great error to magnify this condition even though we are facing a period of re-adjustment.

The economic conditions of the country for the recent past and particularly in the year just closed, point to the imperative need there is for continued access for Canada to the world's markets. The demands made upon us from abroad for our natural and manufactured products during the war

may never be wholly repeated. Nevertheless these demands brought about a world-wide knowledge of our products which, coupled with a high standard of business dealing, created a good will abroad towards Canada. There should be untiring persistence in assuring the permanency of the commercial relations so established. This is undoubtedly a question in which the Banks are materially interested. Just as the country's home and foreign trade progresses, so does the welfare of the banking institution.

The dislocation in all exchanges is giving concern to bankers the world over. The only solution lies in increased production, that and in the further increase of our exports.

#### Deflation Period

The inevitable period of deflation has undoubtedly arrived. There is nothing to warrant us in taking a despondent view of the present or encouraging dismal prognostications of the future. With Canada's potential wealth so easily realizable there is nothing to prevent our surviving a temporary depression, and emerging therefrom in circumstances more fortunate and prosperous than will generally be found to exist the world over. But there must be a determination for harmony and unity among all classes, close application to industry and production, intensive educational and scientific development, a sound foreign trade policy and a fearless entrance into all fields of competition.

We have reached an acute stage in which it will be most unfortunate if our thoughts are distracted by the conflict of local interests. It is not sufficiently felt that Canada is one unit where the greater welfare is concerned. It is submitted that there should be adopted an all-Canadian policy which will encourage development and production in all portions of the Dominion.

#### Export Markets

It is clearly now the critical hour and the commercial flag of Canada should be carried into every available market abroad. A larger vision and determination of this kind is necessary. We must either go forward or go back, and it cannot be thought that we are to recede into the position of a country that merely produces for home consumption when we have demonstrated that we have the means and capacity for world competition in almost any avenue of trade. Our banking system has proven to have been at the same time conservative and progressive. Its soundness requires no demonstration, and, on the other hand, its elasticity and adaptability to great emergencies have recently been conspicuous.

#### Advisory Committees.

The thanks of our Shareholders are due to our Advisory Committees in London, New York, Montreal and Vancouver. At all these points the closest attention has been given to the Bank's affairs, with results that are eminently satisfactory and are apparent in the Balance Sheet which is in your hands to-day. We have indeed been fortunate in enjoying the services in London of such men as Sir Austin Harris, Sir Keith Price and Messrs. Blair and Small; in New York of Messrs. Stuyvesant Fish and Gilbert Thorne; in Vancouver of Messrs. Blake Wilson and George Kidd, and in Montreal of Mr. J. B. Waddell.

We are pleased to report a steady and satisfactory growth in the figures of the Park-Union Foreign Banking Corporation with which we are closely associated. It promises to be a valuable adjunct to this Bank and of material assistance to developing foreign trade.

It is pleasing to observe the attendance here to-day of so many of your Directors from other Provinces. Except where prevented by illness or disability, they have all come together on this occasion. This fact denotes the active interest taken by all these gentlemen in the welfare of the Bank.

#### New Officers

As was intimated at our last Annual Meeting, our good friend, Mr. R. T. Riley, bade us an official farewell during the year. Mr. Riley found it necessary for personal reasons to lighten somewhat the load of public responsibilities which he has been carrying so long. The Bank is greatly indebted to Mr. Riley for his wise counsel in many years past. He has expressed his readiness to assist us on any occasion when that might be desired. We feel, therefore, that Mr. Riley is still in effect one of us. It would be impossible to think of him otherwise. The Vice-Presidency vacated by Mr. Riley was filled by the appointment thereto of Mr. W. R. Allan. That we are fortunate in that appointment is apparent, and needs no emphasis. Mr. Allan's wide experience, his good judgment and business acumen eminently fit him for the position.

Owing to vacancies it became necessary to elect two new Directors to the Board. Messrs. G. M. Black and D. N. Finnie were appointed. These gentlemen are highly regarded both here and in other parts of Canada. Mr. Black has been for many years associated with financial interests and has proven himself of sound judgment and business capacity. Mr. Finnie brings to us valuable commercial experience gained in manufacturing and mercantile spheres. We are fortunate in their acceptance of the trust.

In conclusion, I may say your Directors will exercise courage and discretion in dealing with all problems that may come before them during the year. They believe that the sagacious policy followed by our Executive will enable us to show good results for the ensuing year and that the Union Bank will do its full share in maintaining confidence and in rendering service to its customers and to the public.

## Marked Progress During Year

### GENERAL MANAGER'S ADDRESS

Mr. Chairman and Gentlemen:

It is a pleasure to present to you a satisfactory report of the operations of the Bank for the past year.

Owing to the high price of all commodities during that period and to the very heavy public and private unfunded indebtedness of Great Britain and Europe to this continent, the demand for banking credit has been without precedent. Constant watchfulness has, therefore, been necessary to protect the interests of our shareholders and depositors and, at the same time, to provide adequate banking credit for our customers.

The large increase in our loans due to this inflation has naturally resulted in substantial profits, and I feel it is my duty to point out that the period of deflation upon which we have now entered does not promise such favorable results for 1921. We shall welcome such deflation even though it is at the expense of our earning smaller profits.

### Assists Grain Movement

The peak of the Bank's loans at \$118,000,000 was reached in September, and since that time a steady reduction has taken place until our commercial loans to-day are down to approximately \$70,000,000 and our loans to governments and municipalities \$7,648,000. Our loans for the purpose of assisting in the grain movement amount to approximately \$10,000,000, thus demonstrating that we are meeting all demands made upon us for this important business.

Our policy of rendering the necessary assistance to farmers and ranchers for production purposes during the summer was, we believe, a wise one, as it carried them over a very trying period and prevented undue hardships. We feel that we pursued the right course, though it taxed our resources at the time.

The re-discounting privileges available with the Dominion Government, under the War Finance Act of 1914, were used extensively for this purpose, and the Minister of Finance is to be strongly endorsed for taking the position that the legitimate needs of the country must be financed over a difficult period, even though it meant further inflation of a temporary character. Since the end of the year we have repaid all loans obtained under the above Act.

### Bank's Liquid Position

I am pleased to draw your attention to our liquid position at the present time. It is worthy of notice that the ratio of loans to deposits of all the Canadian banks is now considerably lower than it was in the year 1914, also that the Bank's Reserves to Public Liabilities are higher than they were in that year.

The profits for the year have enabled the payment of a bonus of two per cent. to the shareholders, in addition to the regular annual dividend of 10 per cent., and we have also been able to add \$400,000 to the Rest Account, bringing that fund up to an even six million dollars.

Comparing various items in the Balance Sheet with those of last year, we find:—

### Capital Account

The Paid-up Capital of the Bank now stands at \$8,000,000. Last year our shareholders numbered 3,925 and this year we have 4,211.

### Rest Account

An addition of \$300,000 has been made to the Bank's Rest Account during the year, bringing it up to \$6,000,000, or 75 per cent. of the Capital, as compared with 70.28 per cent. last year.

### Profit and Loss Account

Net profits of \$1,603,842.39, after deducting the usual expenses and provisions, show an increase over the previous year of \$671,585.59. These net earnings are 11.45 per cent. on our Capital and Reserve as compared with 9.70 per cent. last year. The earning power of our new Capital is reflected in these improved figures.

### Deposits

The Total Deposits of the Bank aggregate \$135,524,515.81, which is approximately the same as last year.

### Interest Bearing Deposits

These show an increase of \$1,233,754.85, while non-interest bearing deposits show a decrease of \$1,405,752.87. The latter was not unexpected as we had several large balances of a temporary character.

### Cash Reserves

Our holdings of Gold and Silver Coin and Dominion Notes amount to \$18,586,316.49, being 12.70% of our Liabilities to the Public, as compared with \$14,678,725.93 last year, with a ratio of 9.11%.

### Quick Assets

The percentage of Quick Assets to Total Liabilities to the Public is 54.35% as compared with 47.23% last year.

### Dominion and Provincial Government Securities

The figures this year are \$8,790,636.23, compared with \$13,048,913.69 last year, a decrease of \$4,258,277.46 or 32.63%. This shrinkage is entirely due to the payment at maturity of various issues of our holdings of Dominion of Canada Treasury Bills throughout the past year.

### Canadian Municipal and British and Foreign Securities

These total \$11,900,843.26, compared with \$15,818,016.79 last year, a decrease of \$3,917,173.53 or 24.76%, which is very largely due to the payment at maturity of certain issues of Imperial Treasury Bills which we held.

### Call and Short Loans in Canada

The figures this year are \$5,418,177.66, compared with \$3,439,110.79, an increase of \$1,978,766.87.

### Call and Short Loans Elsewhere Than in Canada

The total this year is \$3,119,133.31, as compared with \$7,956,854.74 in 1919, a decrease of \$4,837,721.43 or 60.79%. This item refers more particularly to our business in London and New York and is of a fluctuating character.

### Current Loans in Canada

Two new headings appear in the statement this year which were included in 1919 under Current Loans in Canada. These are "Demand Loans in Canada Secured by Grain," amounting to \$10,732,755.47, and "Loans to Governments and Municipalities," amounting to \$7,648,176.39. If we include these two headings with Current Loans and Discounts in Canada, we find a total increase of \$1,701,560.62 over last year's figures, as our commercial loans stand at \$69,849,784.93.

### Current Loans Elsewhere Than in Canada

The figures are \$4,494,251.20, as compared with \$3,672,372.29 last year, an increase of \$823,878.91 or 22.43%.

### Liabilities of Customers Under Letters of Credit

These amount to \$3,450,511.93, as compared with \$7,186,940.91 in 1919. The decrease of approximately \$4,000,000 is due to the world-wide contraction of business which has manifested itself during the last few months.

### Central Gold Reserves

The figures this year show a reduction of \$500,000, as compared with 1919, the amount now on deposit being \$5,000,000.

### Bank Premises

The figures this year are \$985,969.61, as compared with \$532,740.61 in 1919, an increase of \$453,229.00. It has been found necessary to erect our own premises at many of the smaller points during the past year.

### Total Assets

Total Assets of the Bank now amount to \$169,205,445.39, as compared with \$174,989,057.47 last year, being a reduction of approximately \$5,700,000. This small reduction cannot be considered unsatisfactory in view of the existing conditions during the last four months. The period of deflation upon which we have entered is already having its effect on our figures and we cannot look forward to any large increase during the coming year unless we are blessed with a very bountiful harvest.

### General Remarks

Due to the unsettled conditions which have obtained throughout the whole world during the year under review, business has not been normal, and has caused bankers much anxiety.

At the beginning of the year we were on the crest of a wave of prosperity which it was most difficult to breast. Unfortunately there are many people who do not, or will not, recognize the fact that prosperity is an abnormal condition of affairs, and that it means that trade conditions are above the level; conversely, depression means that trade conditions are below the level, but between the two is a normal line which indicates steady and healthy progress. Prosperity, at its height, can only travel a certain distance before there is the inevitable reaction. Our Bank, in common with others, did its best to promulgate this view in the early part of the year and warned the public to prepare for a change in conditions, but by many the warning was not heeded. Dealers consequently found themselves with large stocks purchased at high prices, and owing to diminished purchasing power on the part of the public, their credits became frozen and were not liquidated as they should have been. They must now take the consequences and be prepared to accept losses, which may largely offset their profits of the last few years.

There is, unfortunately, still a hope in the minds of some that the recession of prices is temporary and that, through curtailed production, prices will again revive. We think this a mistaken idea and shall do our best to prevent the holding of surplus stocks in the hope of higher prices.

It is reasonable to expect that a return to normal conditions in this splendid country of ours can be accomplished without undue commercial mortality if manufacturers, wholesalers and retailers will only realize the necessity of marketing their goods in a steady and orderly fashion.

### The British Plan

The country's large national debt and the steadily increasing unfavorable trade balances point to the necessity for co-ordinated action on the part of our manufacturers with a view to the development of business in foreign markets. The plan adopted by British manufacturers is well worthy of the attention of Canadian manufacturers. It may be stated briefly that an organization has been formed representing upwards of 17,000 British manufacturing concerns covering all classes of British industry, whose object is by mutual effort and harmonious co-operation to promote British trade with the world to the utmost possible degree. The organization is known as the "Federation of British Industries," and I venture a recommendation to Canadian manufacturers to acquaint themselves more closely with its aims and methods.

It is now generally admitted that the total wheat crop of the three Prairie Provinces is considerably below the estimate of 263,000,000 bushels made by the Federal Government. There were large areas in the three Prairie Provinces where the grain ripened very quickly, with the result that the yield was appreciably lessened. It is, of course, impossible, even at this date, to give an accurate estimate of the total yield, but the best opinion does not grant a maximum of more than 220,000,000 bushels.

### Crop Movements

From September 1st, the beginning of the crop year, to December 31st, approximately 150,000,000 bushels were marketed, of which 123,000,000 bushels were shipped to Fort William, Port Arthur and Canadian mills, and 5,000,000 direct to the United States, leaving about 22,000,000 bushels in country elevators. Approximately 89,000,000 bushels have been shipped from Fort William and Port Arthur, 70% of which was destined for United States ports. It is estimated that 30,000,000 bushels are being held unsold in country and terminal elevators and in transit to Fort William and Port Arthur, which, together with 35,000,000 bushels held by the farmers over and above their seed requirements of 35,000,000 bushels, leaves approximately only 65,000,000 bushels still to be sold,

from the proceeds of which will have to be deducted advances already made against the unsold grain in storage. On the basis of No. 1 Northern in store Fort William and Port Arthur, the average prices obtained are as follows:—

August	-----	\$2.74
September	-----	2.73½
October	-----	2.32
November	-----	2.05
December	-----	1.97½

Our wheat this year has proved to be of a very high quality, 87½% of all cars inspected being of contract grade. This quality has created a demand for our wheat both in Europe and the United States for the purpose of mixing it with softer wheats and those of a lower percentage of gluten. These purchases have been almost entirely for immediate delivery, thereby causing a substantial cash premium over deferred positions. This has resulted in the withholding of wheat by the producers until it was available for spot or on track delivery, thus the handling of our crop to date has been on a much more rapid turn-over basis than in ordinary years, and the banks have had to supply less money for this purpose than usual.

### Eastern Crops

The total value of field crops in the Eastern Provinces for 1914 amounted to \$349,000,000, or 54% of the total, and that of the West to \$289,000,000, or 46% of the total. In 1920 the total value of the Eastern crop was \$858,000,000, or 52%, and in the West \$778,000,000, or 48%. The increased production of 1920 as compared with 1914 amounted to \$509,000,000, or 145%, in the East, and \$488,000,000, or 168%, in the West.

It is pleasing to note the provision that has been made for scientific development of our agricultural interests as evidenced by our educational institutions established for that purpose and the voluntary agencies of our agriculturists formed to disseminate special knowledge for the encouragement of their industry. Our practical farmers have an unerring knowledge of their own needs and interests and have shown high intelligence and energy in promoting their permanent welfare. By their action they have made it clear that Canada is a prosperous land for the earnest and intelligent farmer and stock-raiser. In the highly important phase of community life and in that of rural education advances have been made which have, in many well settled areas, removed in large part the early pioneering disadvantages and hardships.

### Splendid Future

This is no time to harbor unfounded fears which paralyze industry, but rather to go forward in the confidence that we have a land of plenty. It is a wonderful heritage and demands our best endeavors. If these are given with prudence, hard work and economy, the future should yield up a full measure of prosperity. I have abundant faith in the future of our country, its institutions and the ability of our people to build up a nation of high ideals and sound citizenship.

### Staff

We have now completed the readjustment of our Staff, thoroughly disorganized during the war, and have absorbed into the permanent service all those employed in a temporary capacity who wished to remain and whose services were found to be satisfactory. We still find it difficult to obtain a sufficient number of desirable young men as juniors.

Our Staff now totals 2,313, of which 1,606 are males and 707 females. I cannot speak too highly of the loyalty and devotion of these officers and of the splendid work they are performing.

In conclusion, I should like to give you my assurance that no effort will be spared and no labor considered too heavy to uphold the important position which this Bank has attained in the financial life of our Dominion.

## Canada Should Wake Up!

### MR. KENASTON'S ADDRESS

Mr. President: If I may be permitted to diverge from the subject of vote of thanks to the members of the different Advisory Committees, I would like to say a word respecting the reference made by the General Manager to the Agricult-

tural Schools, which are furnishing scientific instruction to the farmers of the country, and the great benefits being derived therefrom.

There is no question but what scientific farming is now, and will later on bring wonderfully satisfactory results to all of Canada, and it is a matter which should encourage the most loyal support of all good citizens of the Dominion.

#### Protective Tariffs

I wish to go on record as being in full accord with this great work, but there is still another, very important subject, to which I would like to call your attention to-day, and that is the subject of rendering scientific aid to the manufacturing industries of Canada. You are buying from the United States approximately one billion dollars' worth per annum, or at least that is the approximate figure which your imports from that country will reach during the current year past.

To-day there is an exceedingly strong element in the United States which is clamoring for a protective tariff against the import of wheat, cattle and other farm products from Canada. I hope that the bills introduced asking for these duties will not be enacted into laws, but the chance is that they will be.

#### Balance of Trade

Now that your very heavy imports from the United States and your handicap in exporting your chief products there to assist in paying for such imports will leave you with an extraordinary heavy balance of trade against you, this balance of trade can only be covered by making loans payable in United States funds in New York.

For the present time the people of the United States are quite willing to buy Canadian bonds with principal and interest payable in their own funds, but there is bound to come a day of reckoning for you when these debts must be paid, and it seems to me most wise at this particular time that the best thought of Canadian statesmanship should devote itself to devising such means as will enable Canada, in so far as is possible, to manufacture within her own borders the things that she needs, as well as as large an export business as can be reasonably handled.

#### Canada's Rich Resources

Canada has wonderfully rich natural resources, including timber, minerals and oil. Naturally there will be discovered from time to time, valuable means and resources unknown at the present time. The assembly and practical use of these resources and the best method of utilizing their value in manufactured articles is a subject which should be most carefully studied.

The individual manufacturer can neither afford the time or the expense to pursue this study as it should be done; therefore, it seems to me wise that the Government, in the interest of the whole people, might well devote a reasonable sum from income and Excess Profits taxes to the establishment of a department to be organized and operated under Government control for the purpose of analytical research of the natural resources of Canada and the best application of the same for the use of manufacturers and general commerce.

#### Germany and Canada

A concrete example of resultant benefits of governmental aid, such as is suggested, may be had by referring to pre-war Germany and the eminence to which the Germans had attained in research work and practical science as applied to the manufacture and general uses of their discoveries. Germany, as compared with Canada, was, and is, very poor in natural resources, and it was only through the strict application of her intelligent research that she was able to attain her then commercial position in the world.

#### Canada, Wake Up!

Another reason why it seems to me that Canada should wake up at the present juncture, is the fact that the most progressive countries of the world are emerging from the state of confusion resulting from the Great War just as rapidly as they can, and, in common vernacular, "it is up to us to get busy," unless we wish to be left behind in the race.

## General Proceedings of the Meeting

Mr. John Galt moved, seconded by Mr. Stephen Haas, that the report be adopted and that it be printed for distribution.

The Chairman informed the meeting that the retiring Auditors were eligible for re-election, and that no other nominations had been received. It was then moved by Mr. James Fisher, K.C., and seconded by Mr. W. J. Christie, that Messrs. T. Harry Webb, C.A., and E. S. Read, C.A., of the firm of Messrs. George A. Touche & Co., be reappointed as Auditors of the Bank. Carried.

It was then moved by Mr. James Fisher, K.C., and seconded by Mr. W. J. Christie, that a sum not exceeding \$10,000 be set apart by the Directors for the remuneration of the Auditors, to be apportioned by them as may be deemed advisable. Carried.

The Chairman stated that it was required to provide additional remuneration for the Directors to the extent of \$30,000, and asked the Secretary to read the proposed amending by-law.

The by-law having been read, it was moved by Mr. C. P. Wilson, K.C., and seconded by Mr. J. H. Turnbull, that the by-law be now passed and enacted by the Shareholders accordingly. Carried.

It was moved by Mr. E. L. Drewry and seconded by Mr. R. O. McCulloch, that the meeting proceed to the election of twenty Directors for the ensuing year and that the Chairman do cast one ballot for Messrs. W. R. Allan, G. H. Balfour, G. M. Black, Hume Blake, K.C., M. Bull, Sir John W. Carson, C.B.; B. B. Cronyn, E. L. Drewry, S. E. Elkin, M.P.; D. N. Finnie, John Galt, S. Haas, A. Hitchcock, J. S. Hough, K.C.; W. H. Malkin, R. O. McCulloch, F. E. Kenaston, Sir Wm. Price, Wm. Shaw and G. H. Thomson.

The motion was carried unanimously. The ballot being cast, the Scrutineers reported these gentlemen elected as Directors of the Bank for the year ending November 30, 1921.

It was moved by Mr. J. B. Persse and seconded by Mr. J. Woodman, that the thanks of the Shareholders be tendered to the Honorary President, President, the Vice-Presidents, and the Directors of the Bank, for their valued services during the year. Carried.

Mr. Stephen Haas and Mr. W. H. Malkin responded.

It was moved by Mr. F. E. Kenaston and seconded by Mr. W. R. Allan, that thanks be tendered the gentlemen on the Bank's Advisory Committees.

Mr. George Kidd and Mr. J. E. Waddell responded.

It was moved by Mr. Isaac Campbell, K.C., and seconded by Mr. G. A. Merrick, that the thanks of the Shareholders be hereby tendered the General Manager, Assistant General Managers, Superintendents, Inspectors, Managers and other officers of the Bank for their efficient service during the year. Carried.

Mr. George Wilson and Mr. W. J. Dawson responded briefly on behalf of the staff.

The President then called upon Mr. R. T. Riley to address the meeting. Mr. Riley stated that this was an unexpected pleasure. In the course of his remarks Mr. Riley drew attention to the fact that as a young man he remembered the central western States, such as Iowa and Nebraska, during the process of expanding population, and stated it as his belief that the Prairie Provinces to-day stood in the same relation to the future; and that whereas the total assets of the Union Bank of Canada may now be \$170,000,000, yet he believed that within the lifetime of most of those present they would see these assets increased to \$570,000,000.

Mr. H. A. Mullins, rising to order, endorsed the President's remarks with regard to the embargo on cattle, outlining the present position of the Canadian live stock market at some length.

The meeting then adjourned.

At a subsequent meeting of the newly elected Directors the following officers were elected: Sir Wm. Price, Honorary President; Mr. John Galt, President; Mr. G. H. Thomson, Mr. Stephen Haas, and Mr. W. R. Allan, Vice-Presidents.

**WHERE OUR BANK BRANCHES ARE SITUATED**

(These Figures are as at October 31st, 1920.)

BANK	Ontario	Quebec	Nova Scotia	New Brunswick	P. E. I.	British Columbia	Manitoba	Saskatchewan	Alberta	Yukon and N. W. T.	Newfoundl'd	U. S. A.	United Kingdom	Continental Europe	Mexico	West Indies	Asia	Central America	South America	Other Countries	Total Oct. 31, 1920	Total Oct. 31, 1919

† This Branch is at St. Pierre, Miquelon.

‡ Decline is explained in that last year Sub-branches were included. Sub-branches of the Provinciale Bank now total 250. In order to make a fair comparison with last year, this should be added to the total, bringing that figure to 4,680

**FOUR HUNDRED NEW BRANCHES IN YEAR**

Branch expansion in Canada during the past year, while only half that of 1919, was on a fairly generous scale, as some 400 new offices were opened. Canadian banks now have, roughly, 4,700 offices, including sub-branches. Of these, 4,500 are in Canada, and, assuming a population of 8,000,000, this works out at one banking office for each 1,800 inhabitants, a ratio not equalled in any other country.

The table given herewith shows how the branches are distributed as to provinces, Ontario having as many as all the western provinces together. It was in the eastern sections that the bulk of the new offices were opened during the year, Ontario and Quebec accounting for 335, Nova Scotia 15, New Brunswick and Prince Edward Island three each, British Columbia 25, Manitoba 40 and Saskatchewan and Alberta 14 each. The reason is very probably that it is in the eastern sections that the bulk of the deposits are obtained. In the west, as in all new sections, the customers are borrowers rather than depositors, and, as the resources of the banks have been fully employed in the last few years, new depositors are more sought after than new channels for investment.

In the search for opportunities to establish a branch there have been cases where a competitor's toes have been stepped on, and this has, no doubt, accounted for much of the criticism by bankers of each other's policy in this respect. This criticism has often been heard in the past, but invariably the business obtained has in time been sufficient to justify the banks who made the attempt, and there is no reason to doubt that this will be the case again.

The branch system has been one of the chief factors in the upbuilding of the country, as by it the banks have been able to furnish the necessary accommodation to all classes of business in Canada, whether farmers, merchants or manufacturers, at rates which compare most favorably with those current elsewhere.

It is reported from Montreal that there is small likelihood of much increase in branches in the near future, owing to the difficulty of procuring equipment, particularly safes. During the war there was no demand for these, but since then the makers have not been able to fill orders. The staff problem also is none too easy, even with the large number

of women and girls now employed, as these cannot be sent around the country at short notice, as men expect to be and are, as the service requires.

**IMPERIAL GUARANTEE AND ACCIDENT**

**Sixteenth Annual Report Reveals Company in Fine Position—  
Assets, Premium Income, Interest Earnings,  
all Show Increase**

The sixteenth annual report of the Imperial Guarantee and Accident Insurance Company as presented to the shareholders January 14th indicates a real strengthening of its financial position.

The company now has on its books 25,648 policies for insurance of \$56,684,000, as against 21,686 policies and \$42,091,819 in force at the end of 1919.

Gratifying, indeed, also is the fact that the total assets of the company now stand at \$540,945.95, as against \$512,016.81 a year ago, of which the very substantial sum of \$365,227.46, on a book value basis, consists of high-grade securities, such as government bonds and debentures, all bearing good interest returns.

The premiums on new and renewed business amounted to \$557,771.86, a very satisfactory increase over the previous year of \$107,201.17. After providing \$221,224.94 for unearned premium reserve, reserve for outstanding claims, and providing for other liabilities, the surplus to policyholders stands at \$306,721.01, which together with the un-called subscribed capital, amounting to \$800,000.00, provides a security for all contracts of \$1,106,721.01.

The following lines of insurance are now written by the company: Personal Accident, Sickness, Elevator, Fidelity Guarantee, Plate Glass and Automobile (including insurance of automobiles against fire).

Looking back over the year just closed the directors, shareholders and policyholders have good cause for gratification, as the report reflects most careful and efficient management in the administration of the company's affairs. (Adv.).

## TRANSATLANTIC TRADE RELATIONS

### Exchange Rates Have Been Subjected to Influences of Commodity Prices—The Situation in Wheat

By S. L. JONES

*Manager, Dominion Bank, London, Eng.*

STERLING exchange followed its usual course during the past year, showing early strength and falling to the low point in the autumn when the American and Canadian crops were being exported. It would not fall so low were not Great Britain the financial clearing house for the continent, but, as it is, every recession in the value of the franc, the mark, or the lire, is reflected in a corresponding weakening in the exchange quotation for the pound sterling. When these currencies, including sterling, will return to their pre-war standard of value as compared with the dollar, and stay there, or if they ever will do so, are questions which no one can answer; but while the United States retains so large a proportion of the world's gold, does not purchase abroad in any volume and makes no investments to speak of in loans to other countries, so long must this lopsided condition of affairs remain.

#### Seasonal Fluctuations

Lacking the stabilizing influence of gold shipments, the exchanges must be subject to serious fluctuations, responding seasonally to the flow of the necessities of life from the producing to the non-producing countries. During the rest of the year the tendency is towards recovery in value, as these non-producing countries are centres of travel, controllers of shipping and have many other sources of revenue, but the fact remains that their currencies must show considerable depreciation at certain periods of the year if they cannot produce gold to neutralize the effect of their purchases. It is true that European importers can, in the foreign exchange markets of London and New York and other great centres, buy transfers in the currencies of other trading countries months before they are required to pay for commodities, but this process only tends to hasten or defer the result on the exchanges of such purchases.

#### Fall in Price of Wheat

For some years, due to causes of the war, Great Britain has been largely dependent on the United States and Canada for supplies of wheat, but now Australia and India are in the market again with good crops, and, the exchanges having gone against both, Great Britain has been able to buy advantageously. The effect has been to lower the price of our No. 1 Northern under governmental control, which still exists. There is only one buyer of wheat in Great Britain, the Royal Commission on Wheat Supplies, who receive at their London headquarters each morning offers from local representatives of the exporters abroad. These are accepted or refused according to requirements. The country is so compact, and the amount on hand and required for consumption so well known, that it is possible to estimate accurately in advance how long present supplies will carry the population along. Thus it became known to dealers early in the autumn that all domestic wheat storage accommodation was taken up and the independence of the commission is thus understandable. Sooner or later, however, they must take our wheat, but the effect of the delay has been to leave us with our crop at the head of the lakes, lower the price and throw the burden of financing on the banks for the winter.

#### Money and Credit

International trading in these days of receding values is suffering a set-back which must exist and intensify until demand shows signs of catching up to the supply of commodities, but the people of the world must be fed and clothed and housed. Larger quantities of foodstuffs and general goods will be carried by wholesalers and retailers as confi-

dence returns and capital becomes available for them to increase their stocks. Then the pendulum will swing the other way. Credit is being rationed now, whereas, during the years of war, goods were rationed and credit manufactured far too freely. The result was that money became cheap and goods dear. The process of rectification causes depression, and that is what we have been passing through—a period of strain which must be endured calmly if we are to return safely and quickly to normal times again. Who can doubt the truth of the remark of the president of the Canadian Bankers' Association, Mr. Clarence A. Bogert, who said that Canada will recover sooner than almost any other country.

## TRAVELLERS' MUTUAL BENEFIT RAISES RATES

### Funds for Old and New Members Separated—1920 Revenue Decreased But Surplus is Shown

READJUSTMENT of rates by increases of from 25 to 100 per cent. and re-classification of membership were agreed to at the annual meeting of the Dominion Commercial Travellers' Mutual Benefit Society held in Montreal on January 15. The proposal, submitted by J. G. Watson, provides for the division of the membership into two separate classes, to be known as Classes A and B. The accounting and administration of assessments collected in each class is to be kept entirely separate and distinct, and the amount of the present reserve is to be credited to the A class. The new system becomes effective on March 1st.

#### Old and New Members Separated

Class A will comprise the whole of the present membership with the exception of those members under fifty years of age who may transfer into the new Class B, upon written application and agreement to pay the rate of assessment applicable at their respective attained ages. The rates of assessment payable by the Class A members will be increased from the present figures to amounts ranging from 25 per cent. to 100 per cent. additional in accordance with the length of their respective membership.

The membership of Class B will comprise all new members admitted on and after March 1st, as well as the younger members who may transfer from Class A, and as the scale of assessments adopted for this class conforms with the requirements of the law, it is hoped that a great number of members of the Dominion Commercial Travellers' Association who were more or less reticent about joining under the old system will come forward and join the "Mutual" now that an adequate scale of assessments has been adopted. The necessity for special assessments is done away with under the new plan, and only twelve assessments per annum will be levied henceforth.

The by-laws were also amended to provide for the acceptance into membership of any insurable person under fifty years of age, and it is hoped by this means to greatly augment the present membership during the ensuing years.

#### Results for 1920

The annual report showed that the society lost 26 of its members through death, and all claims had been promptly paid with the exception of three, the forms for which had not been fully completed. The average age of the deceased members was 62 years and the length of their membership averaged 26½ years. Since its inception the society had paid 531 death claims, amounting to \$524,205. The revenue for the past year was considerably lower than the year previous, but in spite of this a surplus of revenue over expenditure was shown in the assessment account. The following are the chief officers for 1921:—President, S. S. Woodward; vice-president, Wm. Blanchard; treasurer, F. C. Cote.

## MODERATE POLICY IN ERECTION OF BUILDINGS

One Large Building Completed, Eighteen in Course of Erection, and Twenty-seven Planned

WHILE the number of new branches opened in 1919 reached a record figure, and the number in 1920 was exceptionally large, the Canadian banks have gone slow in erecting new buildings at the high costs of construction which have prevailed. Some work of this kind has been gone ahead with, however, as the lists below show.

## Building Completed

Banks.	
Commerce	Portage Ave., Winnipeg, Man.
Buildings in Course of Erection	
Montreal	Galt, Ont.
	Main and Arnslie, Montreal, Que.
Union	Portage and Arlington, Winnipeg, Man.
Merchants	Portage and Goulding, Winnipeg, Man.
	Regina, Sask.
Royal	Marpole, B.C.
	Bridgewater, N.S.
	Erskine, Alta.
Standard	St. John, N.B.
	Coaldale, Alta.
Nova Scotia	Annapolis, N.S.
	Queen and McCaul Sts., Toronto.
Commerce	Moncton, N.B.
	Williams Lake, B.C.
	Charlotte St., Sydney, N.S.
Hamilton	Tusford, Sask.
Imperial	Windsor, Ont.
	Queen and Carlaw, Toronto, Ont.
Intended Erections	
Commerce	Powell River, B.C.
	New Glasgow, N.S.
Merchants	Walter St., Galt, Ont.
	Granville and Robson, Vancouver, B.C.
	St. James St., Montreal, Que.
Montreal	Granby, Que.
	Hollis St., Halifax, N.S.
	Prince and Forester Sts., Truro, N.S.
	Woodstock, Ont.
	Banff, Alta.
	Cherry St., Toronto, Ont.
Royal	Drummondville, Que.
	Spring Garden Rd. and Queen St., Halifax, N.S.
	Gage and Main and Boston and Lottridge, Hamilton, Ont.
	Bernard St., Montreal, Que.
	Taber, Alta.
	Morinville, Alta.
Imperial	Kingston Rd. and Balsam Ave., Toronto, Ont.
	Amherstburg, Ont.
Union	Lutes and Main, Moncton, N.B.
	Hastings and Seymour, Vancouver, B.C.
Molsons	Bedford, Que.
	Bernard St., Montreal, Que.
Hochelaga	Ontario St. E., Montreal, Que.
Nova Scotia	New Toronto, Ont.
	Pitt and Charlotte Sts., Sydney, N.S.
Toronto	St. Clair Ave. and Christie St., Toronto, Ont.

The Landry Pulpwood Co., Ltd., of Quebec, is a new company formed to deal in lumber and pulpwood. The authorized capital is \$100,000, of which \$50,000 has been subscribed and paid-up, under a federal charter. A. Landry and J. A. Landry, merchants, of Lac-au-Saumon, Que., are the principals in the company, which is taking over their business. 18,000 cords of pulpwood have already been bought and contracted with American paper mills.

## REVIEW OF BOND MARKET FOR 1921

Exceptionally Large Proportion Sold in United States—Signs Point to Stiffer Prices, says J. W. Mitchell

“FROM the standpoint of finance,” says J. W. Mitchell, vice-president of the Dominion Securities Corporation in a Review of the Bond Market for 1920, “the year 1920 is of special interest because during the second quarter Canada witnessed the arrival of ‘deflation,’ and in due course all its disturbing consequences in the liquidation of commodities, securities, credit and labor. Ever since the termination of the war our bankers and financial leaders had pointed out the necessity of preparing for the inevitable advent of this period of readjustment, but the surprising continuance of increased business and high prices throughout 1919 and the early part of 1920 doubtless led many to regard these warnings as either exaggerated or ill-founded. Certain it is that the fall in general values, coinciding with the financing of a bountiful crop and the tightest money market Canada has ever known, resulted in severe losses in many lines of industry and kept the bond market during the last six months of the year unsettled and apprehensive, with steadily declining prices.”

## Sales in United States

Bond issues of the year he estimates at \$318,832,081, of which 67.18 per cent. was sold in the United States, which is much higher than in the three preceding years. “The low 1917-1918-1919 percentages,” he says, “are explained by the entry of the United States into the war, and the enormous amount of financing they undertook for the Allies before and after the armistice. Very favorable exchange conditions, varying from the low of 7½ per cent. to the high 19¼ per cent. on December 21st, 1920, greatly stimulated the purchase of our securities by the American market, but when we remember the tremendous competition there was from European borrowers like France, Belgium, Norway, Sweden, Denmark and Switzerland, and the exceedingly attractive terms they offered, the reception accorded to Canadian bonds—there was no direct Dominion issue—must be regarded as striking evidence of the confidence of that great market in our financial stability. Apart from their huge direct investments in great industrial undertakings in our country Americans increasingly recognize the necessity of backing up their enormous export trade with Canada (their second best customers) by heavy purchases of our securities, and thus easing to some extent our difficult problem of payment. However that may be, we are extremely fortunate, in view of our large financial requirements, in now being able to borrow over two hundred million dollars per annum from the United States almost as readily if not so cheaply as we did in the pre-war days from Great Britain.”

Regarding prospects for 1921 Mr. Mitchell says: “Enforced liquidation of commodities and the restriction of credit to commercial and industrial enterprises, however, have always inevitably meant cheaper money and the entry of the released funds into the bond market. The increased purchasing power of the dollar is already in evidence, and that increased power will be followed by higher prices for bonds. Undoubtedly erratic conditions will prevail in the early part of the year, but on the whole Canada should witness an active bond market in 1921, with gradually advancing quotations. All long-term bonds already feel the first effects of the changing conditions. As taxation in this country must continue heavy for years to come our long tax-free issues should be increasingly in strong demand.”

A preliminary statement regarding the Huron and Erie Mortgage Corporation's year was presented to the annual convention of Ontario branch managers and heads of departments, held at London, last week. This showed that increases during 1920 in the savings and Canadian debenture departments were the largest in the corporation's history.

# Economic Developments in Western Canada

Drop in Wheat Was Setback, But Solution is Being Sought in Economical Production and Marketing—Natural Resources Are Plentiful, and Immigration is to Be Encouraged—Financing Becomes Easier as Wealth Accumulates

By J. COURTLAND ELLIOTT  
University of Saskatchewan, Saskatoon

**M**ANY developments in western Canada of economic interest and significance to Canadians anxious to see the fullest expansion of the prairie provinces have occurred during the past twelve months, and with the coming of a new year and a new decade problems of unprecedented importance are asserting themselves for solution.

Outstanding among the economic occurrences, of course, has been the rapid decline in the prices paid for grain products, especially for wheat, which stands in the forefront of western production. Briefly the cause is to be found in the fact that bountiful harvests the world over have produced a world surplus variously estimated at from 150,000,000 to 300,000,000 bushels. The important buying market is Europe and by increasing production and reducing consumption through the imperative necessity of counteracting the detrimental effect of the adverse exchanges, that continent to-day is demanding a relatively smaller supply of wheat. Consequently under the system of open trading in cash and future sales of wheat the speculators have naturally been discounting the future probabilities of the market and the price has fallen through the decreased and inelastic demand to a point which in many cases will not cover the cost of production. It has been quite a natural process in line with the disastrous declines in all the commodity markets and represents an aspect of the inescapable psychological attitude of refraining from buying which is being encountered throughout the business world.

## Wheat's Decline Hampers Business

The decline in the prices of the staple commodities of western producers has resulted in a general slowing up of business and, as in other parts of the Dominion, bargain sales are being advertised galore. Although it has been denied in some quarters that the wheat price has had any effect upon business, it seems reasonably certain that the decline has had a very important influence, first, by preventing the liquidation of due obligations and thus obstructing the free flow of credit, and secondly, by reducing not only present but prospective purchases. Indeed, the result of the first influence has been even more important than the second, and the failure on the part of farmers to meet their obligations, either through inability or a seemingly vain desire to wait for higher prices, will not be properly appreciated unless the extent to which a structure of credit has been built up in the west is understood.

Although there is considerable dissatisfaction with respect to the price being obtained, it is more and more generally recognized that it is the result of natural forces, and although manipulation may be responsible for a part of the decline the indications are that the price would have tumbled even under a system of government marketing. Consequently the demands for price control are becoming somewhat less insistent, as it is being realized that in the event of the fixation of a high price Canada would be undersold by other producers, for the value of wheat is determined by world conditions.

## Seek Lower Production Costs

However, the future is not without hope for the western farmer operating under high costs of production. The western universities—magnificent institutions—are concentrating their attention upon methods of reducing the costs of production in agriculture by more efficient methods, and with the gradual spread of knowledge through governmental and university propaganda, it may be confidently assumed that when a more normal condition of affairs has been attained the potentialities of western farm lands will be exploited with consid-

erable profits to the producers. In addition to the spread of knowledge concerning the desirability of more efficient production financial assistance has been planned. Already Manitoba has in operation a provincial bank which utilizes its deposits for the extension of reasonably cheap loans to needy farmers. A similar project is gaining support in Saskatchewan and Alberta, and already Hon. C. A. Dunning, provincial treasurer of the former province, is engaged in the flotation of a farm loan bond issue of \$3,500,000 whereby prosperous farmers will subscribe towards the funds necessary to assist less fortunate producers to secure the greatest possible returns from maximum intensive cultivation of their land. It has been suggested that such a provincial flotation will prejudice the future interests of the producers by forcing mortgage companies out of the field, but the dearth of capital obtainable by these private interests from their ordinary sources in England and Scotland through the adverse exchange rates has, it is said, forced the provincial authorities to secure the necessary loans.

## Co-operative Marketing

It is not only in the lessening costs of production, however, that the farmer may recoup some of his losses sustained in the recent abrupt decline, but also in more efficient distribution of his product. The opinion is being generally expressed, however sound the basis in fact, that there are many preventable wastes in the marketing of Canadian grain, and the producer is determined that he will lessen the margin between the consumer and himself. A co-operative marketing system is already under consideration by the Canadian Council of Agriculture, and the success that has accompanied such ventures in the past with respect to co-operative elevators, co-operative live stock associations, co-operative creameries, and so forth, augurs well for the new plan. It is a perfectly normal development, and despite the antagonism it may arouse in the minds of the middlemen whom it will injure financially it will be welcomed by all those who recognize that competition is the soul of business. If the service can be rendered more satisfactorily or more efficiently it will be a magnificent boon and will richly deserve its rewards. It should be purely a matter of competitive business, and as such must not be confused with political organizations which seek to use the credit of the state for class benefits.

## Manufacturing in the West

Not only in the agricultural sections of the province, however, have there been economic advances during the past year. Those who think of the prairies simply as great fertile plains are doomed to disappointment in their verdict as they travel across them and note the development of industrial possibilities. All of the western provinces have great possibilities in mining, lumbering and manufacturing, and astounding progress will be made in the next few years if conditions are favorable. To-day there are more than seven hundred members of the Canadian Manufacturers' Association west of the great lakes, whereas two decades ago there was not one. Two years ago, according to the Dominion Bureau of Statistics, there were in Saskatchewan alone 1,122 manufacturing establishments, capitalized at \$29,476,260, employing 8,188 persons, and turning out a product valued at \$50,096,635, and since then there have been several hundred additions. Besides the wonderful mining possibilities of northern Manitoba and the tremendous coal deposits of Alberta there are opportunities in Saskatchewan for the development of industries—manufacturing chemicals, glass, paper, brick and tile, fine china and other commodities. Indeed, the clay deposits in Saskatchewan are

very valuable and are being exploited already by American interests. In the neighborhood of Ceylon, Sask., there are sodium sulphate deposits 98 per cent. pure, considered to be the most valuable in the world. In addition to vast forest areas in northern Saskatchewan there are mineral deposits of sodium chloride, salts and potash, coal, gold, petroleum and natural gas in various parts of the province.

#### Control of Resources

Although the east does not seem to appreciate the value of these natural resources, the west is confident that in time they will be exploited, adding materially to the wealth of the provinces, and a conflict is being precipitated to have the federal authority return to the provincial governments control of their natural resources. Nor are the westerners permitting them to lie idle. Their potentialities are being spread broadcast by reports of investigations by provincial departments, by the Western Canada Industrial Association, and to some extent by western members of the Canadian Manufacturers' Association.

To reiterate in detail the production and possibilities of the west would simply emphasize the fact that its resources have hardly been tapped. Capital and not credit is needed to develop the country, and during the next few years in the period of readjustment and development great supplies of capital and thousands of good immigrants will be necessary to exploit western resources. During the past year the government estimates place the wheat production alone at nearly 300,000,000 bushels, with excellent yields per acre, and yet the wheat lands of the west have scarcely been touched. The superintendent of immigration has calculated that there are 128,000,000 acres awaiting development on the prairies. Land values have increased but are still below eastern Canada and the United States, and the opportunities for increased settlement and greater production of grains and live stock will be exceedingly attractive.

#### Encouraging Immigration

Still more sympathetic treatment must be expected from the Dominion and provincial authorities in spite of their generous assistance in the past with respect to inducing desirable immigration and the extension of financial aid. The Western Canada Colonization Association—a development of the past year—has been formed by eastern and western business men seeking the largest realization of the prairie provinces' heritage to assist settlement, and in spite of the words that have been uttered and written, it is the opinion of the writer that, fundamentally, there is nothing which should antagonize east and west, and that a compromise upon national differences can be secured if mutual tolerance is evinced by both sides of the so-called controversy.

A great deal of dissatisfaction has been expressed in the past in the west concerning the treatment by the chartered banks, and the establishment of provincial banks and farm loan boards has been largely an outgrowth of their apparent "stinginess" of funds necessary for western development. It is not always certain, however, that the western farmer properly appreciates the functions of commercial banks. The extent to which the banks of Canada have built up the prairie provinces has not been fully realized, but there is a limit to the extension of credit, for credit must be based upon ultimate ability to repay the debt—that is, upon the production of future goods.

#### Savings Must Accumulate

The sources of capital—which in the final analysis is not money, but the surplus of production over consumption—must come from the savings of Canadian individuals and corporations cognizant of the possibilities of the prairie provinces, and whether these savings are derived ultimately from banks, farm loan boards, mortgage companies or any other form of business organization, the extension of credit will have to be founded upon the probable productiveness of the western farmers, and not, as in the past, upon a hit-and-miss rule of granting credit to anyone who desired it. The former is the only safe way of western development—slow, perhaps, but sure.

#### The Tariff and Taxation

Finally any reference to economic developments in the west would be incomplete without a brief review of the attitude towards the tariff and taxation—the fundamental economic problems of Canada. During the past few years there have arisen in western Canada the great farmers' organizations, which are firmly entrenched, it would seem, in the hearts and lives of the great mass of the people. In every community there is a farmers' or a grain growers' local under the supervision of a provincial executive, which in turn reports to the Canadian Council of Agriculture in Winnipeg—an incredibly strong organization of farmers because they have been fired with zeal for a cause which they believe is just.

Without commenting upon the possibilities of such an organization it is safe to say that the injustices and oppressions of the tariff—apparent or real—and the desire for a better standard of living have bound the farmers into a unit seeking the achievement of these aspirations through freer trade and better conditions on western farms. Anyone who has travelled in the more remote districts realizes that the pioneer days are not yet over and he will sympathize with the farmers in their desire to secure a better standard of living. The space is too limited to go into a discussion of the means which their organizations are utilizing to effect these ends—suffice it to say that the prospect of an early election is consolidating the farmers' movement and is simply in line with group tendencies the world over seeking to achieve real economic democracy.

#### Future of the West

From an agricultural, industrial and social standpoint the west is facing great days and each setting of the sun sees the energetic, alert and progressive western pioneers one day nearer their goal of making the prairies the banner provinces of Canada. Reverses there have been in the past; reverses there shall be in the future. But something more than a temporary setback will have to take place to cause the prairie dwellers to lose heart or courage and bedim their eyes to the glorious future that lies ahead. Much will depend upon the sympathetic understanding of all classes towards their aspirations and ideals; much will hinge upon the supply of capital and sound development of western Canada in the urban and rural areas; much will rest upon the policy of immigration. To-day there is a real and sincere attempt to get down to a firm basis and the outcome is in the hands of a hardy breed of Canadians who will not be deterred from seeking their highest good by the denunciations of those who cannot see the forest for the trees, who base their judgment upon what they conceive to be the tariff heresies of the west, and consequently would withhold support from men and women who need every encouragement in their uphill fight.

#### TORONTO MORTGAGE COMPANY

A contraction in mortgage business is seen in the annual report of the Toronto Mortgage Co., which shows mortgage loans as at December 31, 1920, at a figure of \$1,777,241, as against \$1,974,270 at the end of the previous year. As against this decrease the company's holdings of Dominion and provincial government and municipal securities have increased from \$900,535 to \$989,136, while cash on hand and in banks is about \$27,000 higher at \$117,712.

Liabilities to the public are lower, as a result of a reduction in debentures, both sterling and otherwise, of \$106,649, and a slight decrease in deposits of \$7,884. The reserve fund has been increased \$30,000, and now stands at \$700,000, as against the outstanding capital of \$724,550. Liquid assets are approximately eighty per cent., of the total liabilities to the public.

The profit and loss account shows interest on investments at \$216,641, being a small increase of about \$3,000 over the previous year. The nine per cent. dividend was maintained, and a balance of \$37,588 was carried forward, as compared with a balance forward in 1919 of \$39,412.

# Trade Expansion Reviewed at Royal Bank Annual Meeting

**Sir Herbert Holt, President, Stated That Considering the Times, Canadians Are a Fortunate People—Government Ownership of Railways and Fleet More Expensive Than Pension Charges and other Legacies of War.**

**Edson L. Pease, Vice-President and Managing Director, Points Out That Business is Being Brought Down to a New and Sounder Basis—Foreign Branches Important Factor in Building Up Foreign Trade of the Dominion.**

**C. E. Neill, General Manager, Reviews Most Successful Year in History of the Bank—Total Assets Now Stand at \$594,670,013, an Increase For the Year of \$61,022,928.**

The fifty-second annual meeting of the Royal Bank of Canada marked the close of the most successful year in the history of the bank, and was also featured by a number of interesting announcements by Sir Herbert Holt, the president, and Edson L. Pease, vice-president and managing director.

The past year has been one of unusual developments throughout the world, and many problems have naturally developed for the larger banks. Sir Herbert Holt made a particular reference to the situation in Canada at the present time, and touched on what the bank considered to be the outlook. In discussing this subject, Sir Herbert said:—

"The position of Canada is fundamentally sound. Considering the times, we are a fortunate people. No nation has escaped the aftermath of the war, and throughout the world there is disturbance or unrest. In China, famine spreads desolation, confusion and terror reign in Russia, while Europe is grappling with complex problems. Even in progressive Japan, industry is paralyzed. Contrast this with our condition. Our crops are the most valuable in our history, even at the reduced prices obtainable; bank deposits have doubled since 1913; most merchants have set aside reserves in the years of plenty to tide them over a lean period, and a great part of the bonded indebtedness of the country is held within the Dominion. Moreover, our friendship and cordial relations with our neighbor render unnecessary the expenditure for armaments which is strangling Europe. Unemployment is less, and business failures are fewer, comparatively, than in the United States, and when our war liquidation is over, we should be among the first to enter upon a new era of stable prosperity."

## HIGH COST OF GOVERNMENT OPERATION.

Sir Herbert also dealt with the Government control and pointed out the tremendous load that is now being inflicted upon the country through Government ownership of rail-

ways. Discussing the question of Government control, Sir Herbert said:—

"Government control has practically disappeared during the year just past—wheat, paper and sugar being the commodities to be freed from regulation. Government ownership of transportation systems has developed. Without any advantage to the public in efficiency or rates, the operation of our national railways during the past twelve months has resulted in a loss which will probably more than absorb the amounts collected on excess profits and income taxes for the year 1919. Unless Government methods of operation are more efficient in this country than they have been in others, tax payers in Canada may find the maintenance of their railroads and fleet more expensive than pension charges and other legacies of the war combined. Of a total of \$6,400,000,000 spent by the United States during the last year, \$1,037,000,000 went to pay the cost incurred by the Government in its control of the railroads. The present waste is obvious and the remedy should be speedy and effective. The needs of the country call for business-like administration of its assets. If this be afforded, we can attack our problems with added confidence."

## SITUATION IN CUBA.

Owing to the important developments that have occurred in Cuba and the interest which the bank has in that centre, Sir Herbert reviewed the Cuban situation and also drew attention particularly to the bank's position. In dealing with this subject, Sir Herbert said:—

You will doubtless wish to hear how we fared in Cuba, in view of the recent financial disturbances in that Island, and our interests there. The business of Cuba is bound up in sugar. Production last season was some 700,000 tons less than estimated, and prices naturally rose abnormally, reaching over 23½c. last May. A sugar famine in the United States appeared inevitable, when relief came from an un-

expected source. Financial disturbances in the Far East, and the sudden fall in the silver exchanges, led to the curtailment of Far Eastern purchases of sugar in the Java market. This sugar was available for the United States, and it is estimated that that country purchased altogether 500,000 tons of Japan and other sugars, of which ordinarily not a pound would have come to this continent. The market price broke violently and has continued steadily downward, to-day the quoted price being  $4\frac{1}{2}$  cents per pound. Cuba was left holding a stock of 300,000 tons, about 10% of last season's production. 90% of the crop had been sold at prices which averaged not less than 10c. per pound, and the amount thus realized, over \$700,000,000, was much greater than that obtained for the whole crop of 1918-19, itself a record season. Certain individuals and firms, however, were hard hit by the collapse in prices. The fall left them to face a severe loss, and these individual embarrassments were the original cause of Cuba's troubles. The difficulties of one Cuban bank which suspended operations in October last, were caused only partly by losses in sugar. The main reason was probably over-extension of its business. On its suspension the Cuban Government declared a moratorium.

Thanks to the precautions taken by our management in early warning our officers in Cuba of the inevitable reaction that would follow the excessively high prices, and instructing them to adhere to our policy of making no advances for speculative purposes. I am pleased to tell you that we have made no loss, and do not anticipate making any loss as a result of the present financial disturbances; in any case full provision has been made for unforeseen contingencies. We are conducting business as usual, not taking advantage of the moratorium, being satisfied, after an experience of over twenty years, that there is no safer banking field than Cuba.

While I see no need for pessimism at this time, we should look the situation in the face. The present reaction is a temporary set-back only, but before normal business activity is restored, further liquidation is inevitable. In the United States this liquidation has proceeded far more rapidly than here, and the fall in prices has been much greater than with us. I see no escape from the common level. This further fall will involve business losses, curtailment of manufacturing and partial unemployment of labor. Trade will then be placed on a sounder and surer basis. There is comfort in the thought that a return to normal prices will bring relief from the high cost of living, which has become so intolerable.

#### VICE-PRESIDENT'S REMARKS.

Edson L. Pease, the vice-president and managing director, dwelt more particularly with the affairs of the bank and the endeavors that were being made all the time to increase the export and import trade of the country. Dealing with this form of business, Mr. Pease said:—

"Despite the generally unsatisfactory condition of international trade, due to impaired buying power and depreciation exchanges, we have every reason to be thankful for the results and the quality of the business we have built up in the countries where we are represented. Our branches in South America are making steady progress, and we are well pleased with the outcome of our first year's operations there. We are moving slowly, taking no undue risks. It must not be supposed that a bank's interests in a foreign country are necessarily jeopardized in consequence of weak exchanges. As a matter of fact, we are not affected by the wide up and down movements in exchange, since our position in the exchange market is covered daily by sales against purchases and vice versa.

#### ADVANTAGE OF FOREIGN BRANCHES.

"Without exception the operation of our foreign branches has been satisfactory, and in this connection I desire again to put on record my views as to the advantage of conducting foreign business, where possible, through the medium

of our own branches rather than through affiliations with other banks, which we do not control. It is only through its own branches that a bank can keep in close touch with its customers and give efficient personal service.

"That the expansion of a bank does not mean a drain on the main organization is something which I have had occasion to point out many times. The figures of our foreign loans and deposits as they stood at November 30th last year affirm this fact.

Deposits .....	\$164,000,000
Loans .....	\$102,000,000

#### PREFERENTIAL TARIFF WITH BRITISH WEST INDIES.

"The preferential tariff agreement between Canada and the British Colonies in the Caribbean, which now awaits ratification by the Dominion Parliament, will not only result in trade advantages, but will serve to strengthen the movement for closer union. A most gratifying feature is that Jamaica, British Honduras, Bermuda and the Bahamas, which did not join in the old pact of 1912, are parties to the new arrangement. Canadian trade with these British colonies, which was increasing steadily under the influence of the preferential tariff arranged in 1912, will receive fresh impetus from the very favorable conditions now in prospect. The trade of the British West Indies reaches surprisingly large figures, the total value of their 1919 imports and exports being about 250 million dollars. Of this amount, a little over 100 million dollars is represented by imports, one-third of which is supplied by the United States.

"In summing up the general business situation, while I feel that casual optimism is out of place, and that we ought all to recognize the fact that business is being brought down to a new and sounder basis, I think that undue pessimism is just as bad as the other extreme. Whatever the difficulties we have to face in the near future, the fundamentals of Canada's position are sound, granted that the Canadian people work hard and exercise reasonable economy.

"In the period we are thus looking forward to, I feel confident that this bank will play no small part."

#### DEVELOPMENT OF FOREIGN TRADE.

Mr. Pease also touched upon the commercial relations between Canada and the United States. Dealing with this subject and the manner in which our exchange had been affected, he said:—

"The character of our foreign trade has also changed sharply. The year ending November 30th, 1920, shows an adverse balance of \$56,000,000 as compared with a favorable balance for the year ending November 30th, 1919, of \$330,000,000. Exports during the past year were well maintained at slightly above the level of the previous year, but imports showed an increase of \$425,000,000. Our imports from the United States amounted to \$925,000,000, an increase of \$200,000,000 over the previous year, due in large part to increased prices of commodities. During the five years 1910-1914, the percentage of exports to the United States to imports from the United States averaged 40 per cent. Since then the percentage has improved, and will probably be 58 per cent. this fiscal year. Our exports last year were notably supported by sales of lumber, pulp and paper. On the other hand, the consumption of those articles for the supply of which we are largely dependent upon the United States; is increasing with the growth of the country. Iron and steel products imported during the six months ending September were of about the same value as those for the entire fiscal year 1913, viz.: \$130,000,000. The year's purchases of cotton and its products in the United States were \$70,000,000, compared with \$17,000,000; automobiles, 11,000 as against 8,000; \$12,500,000 worth of automobile parts as compared with less than a million dollars. We consumed 300,000,000 gallons of United States petroleum, gasoline and lubricating oils, as against 190,000,000 in 1913."

## NECESSITY OF INCREASED EXPORTS.

Is it any wonder we are suffering from adverse exchange rates? The only correctives are, we repeat, the curtailment of imports of non-essential articles and the increase of exports. So far as a country's currency is at a discount, the cost of imports is increased, and wide fluctuations tend to change legitimate business into speculation. We in Canada have been fortunate in that our exchange relations with the United States have been fairly stable compared with those of other countries with the United States. The premium on American funds ranged from eight to nineteen per cent. during the past year, and is now 15%. Contrast this with the discount on other currencies in New York on December 31st; Sterling, 27%; French exchange, 69%; and Italian exchange 82%.

Difficulties incident to a period of falling prices in Canada and abroad have been lessened by the fact that this year's field crops in the Dominion have been abundant, and are estimated to represent in value an increase of \$184,000,000 over the previous year, this despite the fact that the acreage sown to wheat in 1920 was about a million acres less than the previous year, and the average price for wheat is low compared with the price paid by the Government last year for the entire crop, viz.: \$2.63 per bushel. The partial abstention of the British Royal Commission from buying new crop wheat has been an unfortunate feature, but their place in the market has been taken to a certain extent by the United States and various continental countries.

In summing up the general situation in Canada, Mr. Pease said:—

"In summing up the general business situation, while I feel that casual optimism is out of place, and that we ought all to recognize the fact that business is being brought down to a new and sounder basis, I think that undue pessimism is just as bad as the other extreme. Whatever the difficulties we have to face in the near future, the fundamentals of Canada's position are sound, granted that the Canadian people work hard and exercise reasonable economy."

## BEST YEAR IN HISTORY.

C. E. Neill, the general manager, in reviewing the statement for the past year, said:—

"The Statement submitted to you to-day records another year of substantial growth. The total assets of the bank are now \$594,670,013.43, an increase of \$61,022,928.50 for the year. Total deposits are \$455,017,387.02, the growth being \$61,463,229.74.

"It will be noted that there is a shrinkage in free deposits, which is accounted for by the fact that on November 30, 1919, we had large special deposits in connection with subscriptions to the Victory Loan.

"The substantial increase in interest-bearing deposits is a particularly satisfactory feature, inasmuch as deposits of this class to a considerable extent represent the savings of the people.

"The note circulation of the bank continues to expand.

"An increase of no less than \$52,951,830 in current loans is the result of our policy of affording legitimate assistance to clients of the bank during a period of great trade expansion. The percentage of current loans to total assets of the bank is now 48.16.

"The substantial reduction in our holding of Government securities is due chiefly to repayment of loans granted to the Imperial Government for war purposes.

"In view of the heavy demands made on us by commercial borrowers, it is satisfactory to note that the liquid position of the bank is well maintained, liquid assets being 50.50% of liabilities to the public, our actual cash and deposits in banks being over 30% of our total liabilities.

## INCREASE IN CAPITAL AND RESERVE.

"The capital of the bank has been increased during the year by the issue of 34,000 shares to our shareholders at \$150 per share. Although the final instalment is not due until April 11th, only \$265,990 remains to be paid on account of the new issue.

"The Reserve Fund now equals the capital, having been increased through the year by premium received on new stock and by an appropriation from profits.

"The substantial growth in the bank's resources has resulted in a satisfactory increase in earnings, the net profits being \$4,253,649.24, equal to 23.70% on our capital, or 12.01% on our combined capital and reserve.

"The usual dividends and an additional bonus of 2% have been paid to shareholders, and a balance of \$546,928.20 is carried forward in Profit and Loss Account.

"I desire to draw particular attention to the fact that in addition to writing off all bad debts, the fullest provision has been made for any loans of a doubtful character.

"In view of existing conditions, a particularly careful revaluation of the assets of the bank has been made, and it is gratifying to know that our position is a very satisfactory one. In this connection I wish to draw special attention to the fact that the loans of the bank are very widely distributed, and that we have no unusually large individual advances of any kind on our books."

## WHAT LABOR WANTS

Demand for Recognition as Well as Remuneration is at Bottom of Movement — Representation on Directorate is Fair Solution

By ANGUS LYELL

AN analysis of the labor unrest of to-day reveals some comparatively new features. There is, for example, the matter of combination among trades unions leading to the sympathetic strike, which is usually decried by the public. The force of this weapon is easily discernible in the conditions surrounding the recent coal strike in Great Britain, where the railway men and transport workers were prepared to lend active assistance through cessation of work. Had the strike developed according to prearranged plan the economic loss to the nation would have been enormous.

But the industrial unrest that prevails is not caused wholly by an agitation for increased wages. Behind the monetary demands is a demand for recognition; for a voice in industrial management. Mr. Thomas has made this quite clear on several occasions when arguing for the nationalization of railways in Great Britain. Profit-sharing and bonus

schemes have been tried, but more or less in vain. These affect the earnings but not the status of labor, and what the average workman now wants is a function a good deal different from that which we were wont to describe as a cog in the wheels of industry. It is this effort to place business administration on an entirely new basis which I propose to discuss.

## Capital Now Directs

It cannot be denied that business management has been, and is, a prerogative of capital. It is perfectly true that the shareholders of a joint stock company, unless few in number, have usually but little to say in the actual direction of their company's affairs. They elect, from year to year, a few of their members to act as directors. These in turn appoint a manager and other necessary officials to carry on the business of the company, the directors advising on, or merely approving of, matters of policy and procedure. But while the management may even dictate to the directors in cases where the directors are more or less of an ornament or a body created to comply with the law, the control is vested fundamentally in the shareholders — in capital.

What the workers are now demanding, in addition to wages which will provide fairly of the comforts of life, is im-

ply a share in industrial management. Analyzed and stripped of side issues it will be found that most of the demands of labor to-day could be settled if these were granted. Let the workers elect certain of their members—the most skilled for the duty to be undertaken—to sit on the board of directors, help decide the policy and direct the procedure of the venture, help appoint the necessary officers, and so on, and we will be well on the road to industrial harmony.

#### Could Labor Be Trusted?

There are, of course, several vital principles involved in this. With a representation on the directorate labor would become familiar with the risks of modern business enterprise and the actual earnings of capital, unless the management was sufficiently astute to hide from the directors certain fundamental financial manipulations. Trade secrets and risks would become known to the representatives of labor and might be disclosed by them to rival competitors, with serious ensuing loss, in case of friction with the workmen. Loyalty, as a general rule, however, may be safely assumed. My own opinion is that if capital frankly and fully discloses its actual circumstances labor will co-operate in any reasonable request.

We should not lose sight of the fact that capital is but one factor in production. It is non-human, as is land, under which term is included raw material, the forces of nature, power, the location of an industry, and so on. Labor and management are the human factors. It is the workman who, under the direction of the appointees of capital—the management—transforms natural forces into marketable commodities. But it is the representatives of capital who wholly direct, and herein lies the cause of much of the industrial unrest of the day.

#### Management an Essential Factor

I will admit freely that land, labor and capital, though assembled in any business enterprise, are virtually useless without efficient management. They require direction. They have to be united in their proper proportions. Business administration is really a science. In every successful industrial enterprise there are a few men who direct—perhaps there may be only one. These are the outstanding personalities in the venture. And while labor might have a place on the directorate, labor could not materially interfere with the work of these men without perhaps serious and fatal disorganization.

But, as already stated, representation on the directorate would enable labor to acquire exact knowledge of the financial standing of the company. To-day in many cases actual earnings are covered by clever manipulation, dating back usually to the time of incorporation. A company which is osten-

## Condensed Advertisements

"Positions Wanted," 3c per word; all other condensed advertisements 5c per word. Minimum charge for any condensed advertisement, 65c per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

A FAST-GROWING GENERAL AGENCY, with excellent organization, requires additional representation in their office for the Provinces of Alberta and Saskatchewan. Experienced underwriters of proven ability. We have three inspectors in this field. An exceptional opportunity for the company just entering this territory. Box 373, *Monetary Times*, Toronto.

EXECUTIVE.—Age 35. Twenty years' experience. Eight years in Railway Operating and Construction Department, twelve years in Accounting Department, past five years as General Auditor. Expert Accountant, thorough knowledge of railway and construction materials, well informed in financial matters, seeks engagement. Box 381, *Monetary Times*, Toronto.

## NOTICE

LAKE SUPERIOR PAPER COMPANY, LIMITED

Incorporated under the laws of the Dominion of Canada

To the Holders of Six Per Cent First Mortgage 30-Year Gold Bonds of the above-named Company

Notice is hereby given that at a Special General Meeting of Shareholders of The Spanish River Pulp and Paper Mills, Limited, held at the Head Office of the Company, in the City of Toronto, on the 23rd day of June, 1920, the Shareholders approved of a plan to pay the accumulated dividends on the Preference Stock of the Company up to June 30th, 1920, amounting to 42%, by the declaration of a Preferred Stock dividend, and that in accordance with Clause 5 of a Supplemental Mortgage dated the 20th of January, 1915, made between Lake Superior Paper Company, Limited, and The Royal Trust Company, the holders of the various bonds mentioned in said clause, including the holders of the bonds to whom this notice is directed will receive their pro rata share of 10% of the total amount of the Preference Stock of The Spanish River Pulp and Paper Mills, Limited, issued in accordance with the said plan so approved by the Shareholders as aforesaid. Under the terms of the said Clause 5 of above Supplemental Mortgage the holders of the various bonds therein mentioned are also entitled to 10% of the total amount of any cash dividend paid to the holders of the Common and/or Preference shares of The Spanish River Pulp and Paper Mills, Limited. A cash dividend of 1¼% for the quarter ending September 30th, 1920, has been distributed to both Common and Preferred Shareholders, and bondholders will be accordingly entitled to their pro rata share of such dividend.

In order to distribute to the holders of the above-mentioned Six Per Cent. First Mortgage 30-Year Gold Bonds their proportion of said Preference Shares under said Clause 5, and to provide a convenient means of distributing the above and all future cash dividends to bondholders, it will be necessary that all holders of said bonds, whether of registered bonds or bearer bonds, send their bonds at once to The Royal Trust Company, 59 Yonge Street, Toronto; or The Royal Trust Company, Montreal, Quebec; or Agents of the Bank of Montreal, 64 Wall Street, New York City; or City Trust and Savings Bank, Dayton, Ohio; or The Bank of Montreal, 47 Threadneedle Street, London, E.C., England, in order that the bonds may be stamped with a notation that the holders thereof have received their respective proportion of the said Preference Stock of The Spanish River Pulp and Paper Mills, Limited, and have also received the necessary certificate with coupons attached to enable them to collect their pro rata share of all cash dividends now or hereafter distributable to bondholders.

Bondholders are urged to send in their bonds to any of the above places at once, in order that the above distribution may be made without undue delay.

THE ROYAL TRUST COMPANY,

Trustee.

Toronto, November 24th, 1920.

352

At the annual meeting of the Ontario Power Company, which is owned by the Ontario Hydro-Electric Commission, held in Toronto on January 12, the 1920 board of directors was re-elected, and the meeting then adjourned, awaiting the return of Sir Adam Beck from Europe.

**DIVIDENDS AND NOTICES**

**THE MERCHANTS BANK OF CANADA**

**QUARTERLY DIVIDEND**

A Dividend of Three Per Cent. for the Current Quarter, being at the rate of Twelve Per Cent. per annum, upon the Paid Up Capital Stock of the Bank, was declared payable on 1st February next to Shareholders of record on the evening of 15th January, stock not fully paid up on 1st November to participate from that date on the amounts then paid up and on subsequent payments from the dates thereof.

By Order of the Board.

D. C. MACAROW,  
General Manager.

Montreal, 28th December, 1920. 346

**NOTICE**

is hereby given that the Annual General Meeting of the Policyholders and Guarantors of the

**North American Life Assurance Company**

will be held at the Head Office of the Company, North American Life Building, 112-118 King Street West, Toronto, Ont., on

## WHAT LABOR WANTS

*(Continued from page 42)*

sibly paying a dividend of 10 per cent. on its issued capital may in reality be providing a return of 100 per cent. on the actual money investment. What labor wants to know is the exact earning capacity of the business in order that it, as a necessary factor of production, may receive its fair and just recompense.

Agitation for state ownership, communism, or other form of collective control, springs largely from a desire to replace the existing management, appointed by capital, with some other form of management, in the expectation that better results for labor and the community in general would be obtained. In the propaganda for this fundamental change capital, as such, is usually denounced. The pertinent thing, however, is the form of management.

## Capital Should Be Honest

There can be little industrial harmony while distrust exists. If industrial conflict, usually ruinous, is to be avoided, distrust must be removed. Why should labor, as an important factor in production, not have due representation on the directorate of all industrial enterprises? Why should the workmen not know the exact results of their efforts? Why should actual earnings not be disclosed? Why the setting up of class distinctions and the relegation of labor to a subordinate position?

The representatives of capital to-day are, in my opinion, able to solve the labor problem if they so desire. They can do this independently of government legislation and without financial ruin. Let the management be absolutely honest with labor, showing the workmen just what is being accomplished and indicating their plans and desires. Let there be an honest statement of financial facts. Let all manipulation be eliminated. Let there be due recognition of the place labor occupies as a factor in production, granting to labor a fair say in management, adequate remuneration according to the earnings of the business, and the best possible working conditions. Let these things be and there will be little industrial unrest.

## WESTERN CANADA MUTUAL FIRE INSURANCE

## Windstorm Losses, Adjustments and Premiums—Fire Losses and Their Causes—Relations with Mortgagees

CAUSES of insurance loss and questions of adjustment were the main topics discussed at a meeting of the Western Canada Mutual Fire Insurance Association held in Brandon, Man., December 8-9, 1920, presided over by M. G. Doyle, of the Miniota Farmers' Mutual Fire. T. H. Lamont, inspector of the Portage la Prairie Mutual, addressed the meeting on "Adjustments." Speaking first in reference to windstorm damage, Mr. Lamont remarked that it was very essential to have on application complete and accurate particulars as to the construction of the buildings insured. Windstorm insurance should be placed on buildings which are entirely enclosed, set upon and secured to a good foundation. There should also appear in application a clause setting forth that nothing would be allowed on shingle or board roofs over 20 years old; that payment in full for total loss would be made for such roofs up to 10 years old; after 10 years a reduction of 10% for each year up to 20 years. Flint coat roofing should not be insured against wind damage. An inspection of properties insured against wind damage, prior to damage, is very necessary. Buildings of poor construction should be specifically mentioned on applications, "not insured against wind."

Valuable statistics were quoted giving the ratio of losses for his company from various causes for the years mentioned, as follows: 1916—186 wind claims, \$19,443. Fire

damage, same year, \$60,485. Lightning damage, same year, \$13,905.

1917—98 wind claims, \$7,140. Fire damage, \$71,368. Lightning damage, \$7,638.

1918—92 wind claims, \$6,364. Fire damage, \$50,253. Lightning damage, \$11,858.

1919—235 wind claims, \$25,231. Fire damage, \$98,620. Lightning damage, \$13,657.

1920—Damage from wind is somewhat comparable to that sustained in year 1918.

## Fire Adjustments

Mr. Diggle, of the Sasatchewan Farmers' Mutual, was to have addressed the meeting on fire adjustments, but he was not present, and Mr. Lamont agreed to submit further experience with respect to loss from this cause. Most of his trouble in arriving at satisfactory adjustments had been in cases where the assured were foreigners, the tendency of these people being to grossly exaggerate values, to conceal salvaged goods, etc. Many instances of spontaneous combustion had come to his notice, some of these traceable to greasy overalls being carelessly dropped on the floor of a building, ignited by concentration of the sun's rays through a crack, bubble or other defect in window glass. Greasy jute sacks were another contributory factor. Combustion in barn lofts had been, in cases where the cause of damage was traceable, mostly confined to the east end of barns in which windows were placed. In storing green feed, hay and like produce, in barn lofts, plenty of salt should be scattered through it, as salt has been found a good preventative of heating, souring and gas fermentation which takes place when insufficiently cured and dried produce has been deposited in the barns.

Many fires were traceable to the practice of threshing straw into barn lofts, some of these caused by matches passing through the separator becoming ignited and leaving the blower on fire. In a discussion which took place at this stage of the proceedings, several specific instances of fires from this cause were narrated by members present. The chairman suggested as an advisable move the getting up of a uniform circular to the assured and agents, and a series for farm papers, quoting instances of this nature and advising precautions which should be taken to prevent this class of loss.

## Difficulty With Mortgagees

The secretary brought to the attention of the meeting a possible source of trouble with mortgagees, citing a recent instance in which the Wawanesa had primarily refused to pay a loss account of an unpaid assessment, the mortgagee in question being the Manufacturers' Life Insurance Co. While the loss was eventually paid, the loan company in question experienced considerable trouble in collecting, and have been considering refusal of policies in mutual companies.

Mr. Whitaker and Mr. Doyle were of the opinion that legislation should be secured in Saskatchewan and Alberta similar to that in effect in Manitoba whereby it is obligatory upon any mortgagee to accept any policy tendered by an assured provided such policy is in a mutual company which has been in operation for three or more years. While such is very favorable legislation, it was pointed out by Messrs. Cook and Reed that in the absence of such legislation at present it would be inadvisable to antagonize the loaning companies, and that, while the mortgage clauses as a matter of fact afford ample protection to mortgagees, it would not be amiss to confirm their provisions.

The following resolution was passed on this point:—"That we recommend to the members of the Association that an assurance be given to vendors and mortgagees that all companies, members of this association, appreciate their obligations and shall continue to respect the rights of vendors and mortgagees under the mortgage clause agreement where the premiums are on the assessment note plan."

## DISPUTE OVER SUBSCRIPTION TO STOCK

Alberta Supreme Court Holds that After Agreement Had  
Been Made to Buy Back Shares, Shareholder Lost  
Rights by Repudiating Contract

IN an application by a subscriber for shares in a company to have his name removed from the register the Supreme Court of Alberta held that "a subscriber for shares in a company issued to him upon misrepresentations sufficient to entitle him to rescission is not entitled to have his name removed from the register if he has entered into an agreement to sell his shares to other members of the company. The agreement expressly keeps the shares alive and recognizes them as his property."

## Agreement to Repurchase Shares

The facts of the special case stated to the court were: The applicant, with others of his class, subscribed for shares in the company. A couple of years later they claimed to have learned of some facts in connection with the purchase of the land, for the acquisition of which the company had been formed, and with respect to the constitution and distribution of the company's shares with which they were not theretofore familiar, and they brought action against the company and some of its directors. Two days later a settlement of the action was arrived at, the terms of which were embodied in a written agreement. The company was not a party to this agreement. By it these individual defendants agreed to buy the shares of these dissatisfied shareholders at the prices paid by them therefor, with interest, and to pay all calls made or to be made on them, and to indemnify them against all liability therefor. Each of the shareholders agreed to transfer his shares to the nominee of the defendants upon payment in full therefor, and not to vote on the same until after default had been made by the purchasers. The shareholders who were parties to this agreement seven months after its date brought action against the other parties to it for specific performance of it, in which they afterwards obtained a judgment for specific performance, with a personal judgment against the defendants therein for the amounts respectively owing to them under this agreement. The company was not a party to this action. This judgment directed a rectification of the company's share register by removing therefrom the names of these dissatisfied shareholders and substituting therefor the nominee of the purchasers of their shares. The company refused to obey this order, and a motion at the instance of the plaintiffs in that action, including the applicant, to compel it to do so was cut short by the winding-up order.

His Lordship's decision is as follows: "The first question submitted for my opinion is whether or not the applicant, who was one of the plaintiffs in each of the above-mentioned actions and a party to the above-mentioned agreement, is entitled to have his name removed from the list of contributories. It is assumed, for the purposes of this case, that shares were issued to him upon misrepresentations sufficient to entitle him to rescission, and that he has not waived his rights arising therefrom, or estopped himself from setting them up as a defence otherwise than by reason of the facts contained in the submission and the accompanying documents.

"The applicant's right to rescind was lost by the commencement of the winding-up proceedings unless before then he had repudiated his shares and had commenced proceedings for rescission. The bringing of the first action, in which he was a plaintiff, was a proceeding brought for the rescission of his contract to take these shares, and it was an effective repudiation of them.

## Repudiated Contract

"In this case the applicant most definitely repudiated his contract by the bringing of his action. He sought by it escape from his position as a shareholder. Then those whose acts he relied upon to entitle him to this relief offered to pay him back his money, with interest, and indemnify him from

further liability if he would transfer his shares to them, and this he agreed to do. In this way he thought that he had accomplished what he set out to do, though by a different method, and thus got rid of a bad bargain. In one sense, nothing that was thus done was done "toward the company," for it was no party to this agreement. But in another sense it was. If the applicant had persisted in his original course of action and succeeded in it, the result would have been that his shares would have been wiped from the register entirely and this transaction would have been as though it had never taken place. By reason of his agreement and of the judgment, which he has secured for the specific performance of it, the shares were expressly kept alive, and the purchasers of them became entitled to have them transferred to them upon compliance with the company's requirements in that behalf. The applicant's right to have his name removed from the register and from the list of contributories is based entirely upon his claim that he is entitled to rescission of his contract. It is impossible for him to make *restitutio in integrum* because of his agreement to sell his shares, and he, therefore, is not entitled to rescind. His claim for rescission is absolutely inconsistent with his recognition of his contract in his agreement to sell his shares, his insistence upon that agreement by his action to enforce it, and his subsequent attempt to continue his original contract by having the purchaser of them registered in the books of the company as the owner of them.

"In my opinion, the applicant is, for the reasons given, not entitled to have his name removed from the list of contributories."

## DEED OF LAND TO DEAD PERSON INOPERATIVE

Ontario Supreme Court Decision—Drawn With Purport to  
Convey to Heirs or Assigns

IN an application to the Ontario Supreme Court before Justice Orde, the decision of which is of interest to trust companies, it was held that a deed to a person, his heirs and assigns, that person having previously died, is wholly inoperative to convey any estate either retroactively to that person in his lifetime or directly to his heirs.

His Lordship's statement of the facts and decision thereon are as follows:—

One of the links in the chain of title as registered is a conveyance by way of grant from one Levi Snider to one Henry McCartney, dated the 24th April, 1879, and registered on the 12th of May, 1904. Henry McCartney had in fact died on the 4th January, 1879, more than three months prior to the date of the conveyance. It is not suggested that the deed was really executed prior to his death and by some error dated afterwards, but it appears that McCartney had purchased, or agreed to purchase, in his lifetime, and died before the conveyance was made; and that, through the stupidity of some unlicensed conveyancer, the deed was so drawn and executed as to purport to convey to Henry McCartney, his heirs and assigns.

The purchaser objects to this deed as being wholly inoperative to convey any estate in the lands to any one. The purchaser's objection must be sustained. Among the necessary incidents to a deed are that there shall be at least two parties to it, and that it shall be delivered: (First), Coke upon Littleton, 35, b.; Blackstone, vol. 2, pp. 296 and 306. Among the requisites mentioned by Blackstone (p. 296) is "that there be persons able to contract and be contracted with for the purposes intended by the deed." There was not when the deed was executed by Levi Snider any such person as the Henry McCartney with whom he purported to contract. Nor was there any such person to whom or for whose benefit the deed could be delivered. There is no principle which can make the purported conveyance operate retroactively so as to vest an estate in Henry McCartney during his lifetime.

# News of Industrial Development in Canada

**Revival in Steel Trade Not Yet in Sight—Wages and Prices are the Principal Obstacles—Coal Mining Companies Curtailing Operations—Large Cuts in Textile Prices, States Manufacturer—Outlook for Woollens Brighter—Brick Company Anticipates Extensive Building in the Spring**

**P**OSSIBILITY of an immediate revival in the steel industry in Nova Scotia is not held out by officials closely in touch with the situation, while practically the same conditions rule in other parts of the country. Wages and prices are the principal obstacles, and until these are overcome it is not expected that any favorable developments will take place. President Wolvin, of the Dominion Iron and Steel Corporation, stated recently in Montreal:—

"The continued operations of the company will depend entirely on the volume of business for which orders may be received hereafter. The orders now on hand are no more than sufficient to keep the plant in operation until about the end of the present month. Prospective orders can only be secured on a competitive basis, and to enable the company to be successful in this a substantial reduction in the cost of production will have to be made, including reducing wages, and this alternative the company is reluctantly obliged to resort to in the expectation that sufficient orders may be obtained to keep as large a number as possible, if not all, of those on the payroll at present employed."

The Steel Co. of Canada at Hamilton, and the Algoma Steel Co. at Sault Ste. Marie, are only operating the finishing departments, and are not making pig-iron or steel.

## Coal Industry Also Depressed

Depression in the coal trade is also taking place, and again Nova Scotia is the province principally affected. It is natural to expect curtailment of operations in this field, at the time of depression in the steel trade, as the two industries are so closely related. As stated in these columns last week the smaller companies were more greatly affected, but the large companies are not escaping without feeling the pinch. H. J. McCann, general manager of the Dominion Coal Co., recently stated at Glace Bay, N.S.:—

"The depression which has been felt in other industries for the past several months has commenced to affect the coal mining industries in Nova Scotia. While this is a natural sequence of the curtailment of the manufacturing industries, the depression was not expected to affect the Dominion Coal Co., as they had lately secured a renewal of the orders from the Dutch government, which they had lost when the embargo was put on foreign shipment. However, in the last few days these orders have been cancelled. This, in addition to the reduction in the Steel Co. requirements from 35,000 to 700 tons per day, leaves the company with only the maritime provinces as market for their output. As this market is very limited, it will not afford sufficient outlet to enable the mines to work more than half time.

"In order to meet the new conditions a readjustment of the forces in the machine shop, railways and other auxiliary departments has to be effected. Work in the machine shop will be reduced and over one hundred men will be laid off. Construction work will be limited to those jobs which are absolutely necessary at the present time, resulting in a reduction of several hundred men in this department.

"About one hundred men now employed in repairing and upkeep of company houses will also be laid off within the next week. As the amount of traffic of the Sydney and Louisburg Railway and coal handling at piers will be greatly reduced, a number of train crews and pier men will also be laid off. It is the intention of the company to bank considerable coal with the hope that they may be able to enter Montreal market next summer, but as the American competition is very keen in this, there is no assurance that with the present high cost of production Nova Scotia will be able to compete."

At the same time word comes from Alberta of reduced operations in the coal mines there. Reduction of forces in the coal mines all the way along the Crow are going into effect. Several of the big mines are on part time. However, the situation in the mines of this district is not so bad as at Drumheller where there are practically no orders. Many of the miners of the Lethbridge field will be kept on at development work, as for the past eighteen months there has been little chance to undertake anything but active mining owing to the heavy demand.

## Textile Prices Lower

F. G. Daniels, general manager of the Dominion Textile Co., states that the company's new price list is more than 50 per cent. below the high point of last summer. This reduction is fully equal to that made by the American mills, and has been quite effective in providing Canadian consumers with their customary requirements without calling upon the American product. Only two of the mills of the company, he adds, could be said to be working much below normal. These were mills devoted more particularly to the manufacture of automobile and rubber work, and were operating about half time. The other mills of the company were all fully employed, and some were running overtime. The supply of labor is much improved but up to the present the wage scale remains as heretofore.

According to a statement by Secretary N. T. Macleod, of the South Alberta Wool Growers' Association, the outlook is somewhat brighter than it has been. The last report sent out by the government shows that the Canadian trade in wools continues quiet. A number of mills have been shut down pending a change in the situation. Mills that are now in the market for supplies are buying very cautiously as they have only a few new orders to fill. Sales of medium clothing wool are reported as being at 35 cents, which Mr. Macleod says is slightly in advance of the general expectation in wool circles.

Referring to the future, Mr. Macleod said that Canadian wool growers may have to look to England before long for a market. The English buyers are now satisfied with the government standard of grading wool which clears away one of the difficulties encountered in the past in exporting to the Mother Country. In shipping to England the Canadian wool grower comes in contact with the Australian product, vast quantities of which find their way into the textile centres of the British Isles every year.

## Notes of Industry

Construction of a 60-ton kraft paper mill at the mouth of the Harrison River, British Columbia, costing approximately \$3,000,000, will be commenced immediately by the Harrison Lumber and Pulp Co., headed by Sir Douglas Cameron, which was recently incorporated at \$15,000,000. It is the intention of the company to erect a paper and pulp mill at Kitiman on one of the coast inlets.

One of the largest brick manufacturing firms in Toronto has decided to operate its plant to the fullest capacity throughout the winter, as the outlook is regarded as better than it has been for many years. Extensive building programs will be proceeded with here next spring, the company believes, and is preparing to have a full stock of brick to meet the anticipated demand.

Power development, involving an expenditure roughly estimated at \$60,000 and providing electric current to more than forty cities, towns, villages and rural municipalities in

### THE NORTHWESTERN LIFE

HOME OFFICE BUILDING DONALD ST. WINNIPEG

Manitoba, may be undertaken by the Manitoba Power Commission this year if applications and tentative applications received by the government are acted upon. J. M. Leamy, power commissioner, has announced that the program for the forthcoming year would be limited only by the initial financing provided by the legislature.

A representative of an English wood silk and other pulp products company was in Sarnia, Ont., recently, investigating the possibilities of this city, and although any definite decision as to the establishment of a Canadian branch is held in abeyance pending an improvement in business conditions, it is intimated that the choice for a plant site rests between Sarnia and another Ontario city, with Sarnia holding the advantage, due to facilities offered for securing an ample supply of water required in the process.

The output of Winnipeg factories during 1920 is valued at \$120,000,000, and approximately \$85,000,000 is invested in Winnipeg industries, according to the statement made by D. J. Dyson, chairman of the prairie division of the Canadian Manufacturers' Association.

Abbey, Sask., will have among its industries a new factory where roller disc bearings will be manufactured. The inventor and patentee of the new bearing, Mr. Fiefield, has secured the machinery and steel necessary to make a start at his work. This plant is beginning in a small way, but it is expected will develop before many months into a fairly large factory employing a goodly number of hands.

The Mack Furnace Co., Ltd., recently incorporated with a capital of \$250,000, has secured a plant at Chatham, Ont., and will commence manufacturing.

#### NEW INCORPORATIONS

Dominion Steel Products, Ltd., Brantford, \$3,000,000—  
Sesekinika Divide Mines, Ltd., Toronto, \$3,000,000—  
Cosgrove Export Brewery Co., Ltd., Montreal, \$1,000,000

THE following is a list of companies recently incorporated under Dominion charter, with the head office and authorized capital:—

Godge Casket Manufacturing Co., Ltd., Sutton, \$100,000; Metropolitan Corp., Ltd., London, \$500,000; C. C. Smith and Co., Ltd., Montreal, \$50,000; Federal Manufacturing Co., Ltd., Montreal, \$49,000; Halt Fuel Savers, Ltd., Kitchener, \$500,000; Ottawa Axe and Tool Co., Ltd., Hull, Que., \$100,000; Asbestos Crude and Fibre Mining Corp., Ltd., Montreal, \$600,000; British Dominion Holding and Investment Corp., Ltd., Toronto, \$250,000; Doctor Casewy's Veterinary Remedies, Ltd., Regina, \$100,000; Corporate Securities, Ltd., Montreal, \$300,000; Lumsden Engineering and Transport Co., Ltd., Toronto, \$150,000; Reliance Airless Wheel Co., of Canada, Ltd., Montreal, \$100,000; Evans-McBride, Ltd., Montreal, \$50,000; Leeds Importing Co., Ltd., Montreal, \$25,000; Quaker City Chemical Co., of Canada, Ltd., Hamilton, \$50,000; Cosgrove Export Brewery Co., Ltd., Montreal, \$1,000,000; Press Service Corporation, Ltd., Toronto, \$250,000; New England Oil Corp., Ltd., Montreal, \$10,000; Hawthorn Mills, Ltd., Carleton Place, \$750,000; Dominion Steel Products Co., Ltd., Brantford, \$3,000,000.

#### Provincial Charters

The following is a list of companies recently incorporated under provincial charter:—

British Columbia.—Kameo Shingle Co., Ltd., Vancouver, \$50,000; Harrison Lumber and Pulp Co., Ltd., Vancouver, \$150,000; St. Julien Co., Ltd., Vancouver, \$600,000; Leader Publishing Co., Ltd., Prince George, \$10,000; Canadian Tailoring Co., Ltd., Vancouver, \$10,000; Weld, Maclaren and Co., Ltd., Kelowna, \$10,000; Regina Club, Ltd., Vancouver, \$25,000; Ark Club, Ltd., Vancouver, \$5,000; KorKer Shoe Co. of B.C., Ltd., Vancouver, \$50,000; Rainier Bottling Works, Ltd., Vancouver, \$30,000; British Columbia Japanese Club, Ltd., Vancouver, \$10,000; Hopkins Hamilton Seed Co.,

Ltd., Nanaimo, \$25,000; Strand Buffet Co., Ltd., Vancouver, \$10,000.

Manitoba.—Farmers' Mutual Grain and Elevator Co., Ltd., Winnipeg, \$250,000; North West Trading and Supply Co., Ltd., Winnipeg, \$5,000; John F. McGee Co., Ltd., Winnipeg, \$5,000.

Ontario.—MacLean Building Reports, Ltd., Toronto, \$200,000; Ontario Car Advertisers, Ltd., Toronto, \$40,000; St. Lawrence Steel and Wire Co., Gananoque, \$500,000; Woodworker Publishing Co., Ltd., Toronto, \$100,000; Cache Creek Butter and Cheese Co., Ltd., Cadarette, \$10,000; Glenburn Farms, Ltd., Toronto, \$250,000; Smith's Falls Malleable Castings, Ltd., Smith's Falls, \$750,000; Martin Coal Co., Ltd., London, \$30,000; Bluebird Fashion Shops, Ltd., Toronto, \$40,000; Northrop Strong Securities, Ltd., Toronto, \$5,000,000; Sesekinika Divide Mines, Ltd., Toronto, \$3,000,000; Niagara Glass Co., Ltd., St. Catharines, \$40,000; Dominion Insurance Agencies, Ltd., Toronto, \$40,000.

#### INSURANCE NOTES

The Merchants' Marine Insurance Co., Ltd., of London, England, which recently obtained a Dominion license to write fire and automobile insurance, has received a certificate of registration from the province of Manitoba. John Calverly is western fire manager.

Notice is given that Lloyd's Plate Glass Insurance Co. has ceased to transact business in the province of Manitoba.

At the last session of the Manitoba legislature a hail insurance bill was enacted, providing for a system of municipal hail insurance. The act required that at least thirty-five municipalities pass the bill before it becomes effective but according to the vote taken recently the act cannot become law.

Prospective abandonment of the group insurance proposals, by which employees of Manitoba government are to receive free life insurance, is reported. Difficulty in obtaining a blanket policy low enough in rate to warrant adoption by the government is said to be the reason for the suggestion. According to a member of the civil service, the government, after collecting complete data as to the employees who would benefit, called for tenders from insurance companies willing to accept the business. Four policies are said to have been tendered. None was acceptable, it is stated, and an effort was made to create a satisfactory policy combining the best features of each. This, submitted to the insurance companies, proved equally unsatisfactory, according to reports, and the matter now is at a deadlock.

The Winnipeg Paint and Glass Co. has made arrangements with the Canada Life Assurance Co. for insuring all its employees, under the group plan, who have served with them one year or more. The amount of the policy issued will depend on the length of the service of the employees.

All employees of the Imperial Tobacco Co., of St. Johns, Nfld., have been insured under the group plan in the Sun Life Assurance Co. This is the second contract closed by the Sun Life in Newfoundland.

J. R. Grant has succeeded John Sturrock as branch manager for the Railway Passenger Assurance Co. in Winnipeg.

#### COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended January 14th, 1921:—

Coniagas Mine, 125,827; total, 125,827. The total since January 1 is 288,311 pounds, or 144.1 tons.

MacDougall and MacDougall is the name of the new Montreal stock brokerage partnership which was announced in these columns recently. The company has commenced business in temporary offices at 42 Guardian Building, 102 St. James Street.

## Insuring the Motive Power

The object of Business Insurance is to insure the "brains" of an organization. Knowledge, combined with administrative ability, is invaluable. Every business, large or small, depends primarily upon one or more experienced leaders. The death of any one of them would result in a heavy financial loss. There would be heavy going until the deceased official was replaced by someone of equal ability. The possession of a policy of insurance payable to the firm in the event of the death of such a leader is essential. Joint policies payable on the death of the first partner, or (preferably) separate policies on the lives of the individual partners in favor of the survivors are issued by The Mutual Life of Canada. It will be the object of the Company to adapt each Business Policy to the particular requirements of the insuring firm. Consult our representative. He will be glad to advise you regarding business insurance.

# News of Municipal Finance

**Bill Incorporating the Metropolitan Commission of Montreal Will be Opposed—Calgary's Tax Collections Ahead of Last Year—Vancouver Finances in Better Shape, States Finance Chairman—Winnipeg Will Again Apply to Legislature for Civic Income Tax**

**T**HERE will, it is expected, be a good deal of controversy in the Quebec legislature before the bill incorporating the Metropolitan Commission of the Island of Montreal is either passed or thrown out. The commission, as was fully explained in these columns last week, would have jurisdiction over all the municipalities on the Island of Montreal, as well as the city of Montreal, if created. On the one hand, there are the larger municipalities of the Island, who will insist on a maintenance of their independent existence, while the city of Montreal and a number of the smaller municipalities on the other will endeavor to have all the municipalities forcibly annexed to the city.

Just how the larger municipalities, such as Westmount, Outremont, Montreal West, etc., feel about the subject can be seen in the resolution which was passed by the Westmount Municipal Association at a meeting last week. The resolution reads as follows:—

"That the Westmount Municipal Association, in special meeting assembled, after having given due consideration to the draft of an act to incorporate the Metropolitan Commission of the Island of Montreal, is of opinion that it would be prejudicial to the interests of the city of Westmount and to other municipalities if such an act should be passed by the legislature of the province of Quebec, and that it solemnly protests against any such action, and it would urge the legislators of Quebec to defeat such measure should it be introduced in the legislature.

"It is the conviction of the association that the proposed consolidation of the indebtedness of all the municipalities in the Island of Montreal is neither equitable nor just, as it would mean the penalizing of the municipalities which have carefully administered their finances for the benefit of such as have acted in an injudicious manner.

"The association draws special attention to the fact that the taking from the municipalities of the moneys and investments made for sinking funds would be a serious breach of contract with the bondholders who had purchased bonds with the assurance that the sinking funds would be carefully guarded and protected, and in the case of the city of Westmount such funds are protected by a sinking fund commission appointed under a by-law approved of by the electors."

**Winnipeg, Man.**—Although two former attempts have failed, the city will again approach the legislature for right to impose a civic income tax.

**Langley, B.C.**—The municipality ended 1920 with no bonded indebtedness, all current debts paid and a balance in the bank. Expenditures were some \$25,000 greater than in 1919, but an increase in taxation took care of the excess.

**Kitchener, Ont.**—The auditor's report of the city treasurer's statement for last year shows a surplus of \$13,025. This is considerably higher than was expected when the estimates were struck at 30% mills. The amount of tax arrears out of a total of about \$550,000 is reported to be \$8,184. It is confidently expected that the tax rate can be reduced this year owing to the increased assessment.

**Regina, Sask.**—Collections of current taxes at the city hall during 1920 were not quite so good as the preceding year, although the difference in proportion of the levy collected in comparing the two years was very small. Last year, out of a total levy of \$1,749,092, the officials gathered in \$1,401,286, leaving \$348,706 to go into arrears on January 1. The penalty on this amount of arrearages at 8 per cent. will, when collected, net the city an additional sum of \$27,896. While the collection of current taxes in 1920 represented 80.12 per cent. of the total levy, the percentage of current taxes collected the preceding year was 80.96. The total amount of current taxes collected in 1919 was \$1,332,606 out of a total levy of \$1,645,832.

**Vancouver, B.C.**—Ald. James Ramsay, retiring civic finance chairman, in reviewing the financial status of the city before the council last week, said:—

"I consider the city's financial situation much better than it was at this time last year. In proof of this I would point to the fact that for the first time for six years the city has completed the year without having to resort to an overdraft from its bankers. I believe the heavy receipts which the city now secures from civic license fees and half-yearly water-works receipts, which will be coming in soon, will enable the city to finance payroll demands until the incoming council secures the usual loan in anticipation of this year's taxes. At the same time, I would advise a continuance of the policy of strict civic economy and caution in financial affairs.

"For this satisfactory condition of affairs the city is to a large extent obligated to the property owners, who came forward and paid up both current and arrears of taxes in generous amounts last fall. I regard the broadening of taxation, however, as still the most important problem that confronts the new council, and I believe that Dr. Brittain's report will go a long way towards uniting the many divided factions on this question, so that the civic delegation that will ask new taxation powers from the legislature will present a united front. At present it does not admit of much argument that the taxation burden is too heavy on the few and not broad enough to afford the city sufficient revenue to meet the increasing costs of operation."

**Calgary, Alta.**—Taxes, current and arrears, collected by the city during the year 1920 totalled \$3,745,966, according to a first forecast of the annual statistics prepared by J. H. Mercer, city treasurer. The total amount of such taxes collected in 1919 was \$3,210,000, so that the collection of current taxes and arrears for 1920 were more than half a million greater than in the preceding year. Of the total of \$3,745,966 of current and arrears of taxes collected in 1920, \$2,919,841 were current taxes and \$826,125 were arrears. This payment of arrears of taxes was approximately 20 per cent. of the total owing, and compares with approximately 18 $\frac{2}{3}$  per cent. of the total amount of arrears collected in 1919. In the same manner, the payment of current taxes totalling \$2,919,841 in 1920 was approximately 71 per cent. of the total owing, as compared to collection of approximately 69 $\frac{1}{2}$  per cent. of the current taxes in 1919.

Temporary estimates for the first four months of the year 1921 for the operation of Calgary's public utilities total \$814,700. On this basis, the year's operations of all utilities would cost \$2,444,100. The estimates are based on the actual expenditures for the first four months of 1920. Total estimates for other departments of the city are fixed at \$858,100, and the estimates for the public utilities added to these bring the total city temporary estimates for the first four months of 1921 to \$1,672,800.

Unless the Alberta government agrees to put through some legislation, Calgary will be faced with the necessity of paying possibly a quarter of a million dollars in acquiring titles to the various properties coming into its possession through the tax sales. As a result, the legal department of the city is preparing to make application to the legislature for an amendment to existing legislation to enable the city to acquire title en bloc to large parcels of property coming in at tax sales. Under the existing law the very first step in acquiring title to such property when the transfer is made costs \$3 per lot or parcel for property under \$500 in value and \$4 for property over the \$500 mark. In addition, there are several other charges which probably will make the cost mount up to \$5 or \$6 per parcel. In many instances the cost of acquiring title would be equivalent to or more than the actual value of the property itself.

# Government and Municipal Bond Market

Lifting of Securities Embargo Has Little or No Effect—Alberta Takes Canadian Bid on Two Million Issue—Lethbridge Irrigation Bonds May Sell on Present Merits—Paris Loan to be Made Here on 6½ Per Cent. Basis—Saskatchewan Calls for Tenders—Victory Bonds Easier

**A**NNOUNCEMENT of the removal of the so-called securities embargo had little or no effect on the general bond market this week. As to the future, it is not expected that there will be any noticeable disturbance as a result of the removal of the restrictions. For one thing, the sentiment has greatly improved. Then again the recent improvement in sterling exchange will also have a tendency to making the sale of their holdings less attractive to the owners abroad. With sterling around 4.27 in Montreal, would, in banking opinion, tend to obviate any inclination on the part of overseas holders of Canadian securities to liquidate them. It is not expected in any event that liquidation could go much further, in the dollar securities at least. Canada has already absorbed a large amount of its own issues held abroad, and the supply is very much smaller than it was originally.

## Victory Bonds Easier

Victory bonds were a little easier this week, but the movement was not attributed to the lifting of the embargo, but rather the result of general conditions, as slight reductions in prices were shown previous to January 17. The following are comparative prices of all issues:—

	Control price.	Two weeks end Jan. 12, '21.		This week.	
		High.	Low.	High.	Low.
1922	98	98¾	97	98¾	97½
1927	97	98	95½	98½	97½
1937	98	99½	96½	99¾	99
1923	98	97½	95	97¾	96½
1933	96½	98½	95	98	95¾
1924	97	97¼	94¼	97	96
1934	93	96½	92¾	95¼	95

## Alberta Takes Canadian Bid

Tenders closed this week on Alberta's \$2,000,000 bond issue, and the province accepted the bid for bonds payable in Canada only, paying 6.39 per cent. for its money. The offer for bonds payable in New York was on a 5.98 per cent. basis, but nevertheless it is considered that the provincial treasurer was wise in taking the action that he did.

Trustees of the Lethbridge Northern Irrigation District have been unable to do anything with regard to further guaranteeing of their proposed bond issue on account of the illness of Premier Stewart, but it is stated that a San Francisco bond house is sending a representative to Lethbridge shortly to look over the situation, and that some Portland houses are also interested. Chairman Crofts, of the trustee board, is very hopeful that construction work will be started this year.

The new issue of 6 per cent. City of Paris bonds amounting to \$4,000,000, particulars of which were given in these columns last week, will be offered to the Canadian public at 96.50 to yield 6½ per cent. The offering will be made by a syndicate composed of the Municipal Debenture Corporation, Ltd., Versailles; Vidicaire, Boulsis, Ltd., Beaubien and Co., Credit Canadien, Inc. The first instalment of the \$20,000,000 loan authorized by the city of Paris for placement in Canada was sold recently by the Municipal Debenture Corporation, and was for \$2,000,000.

## Expect Heavy Borrowing in U.S.

A dispatch from New York states that there will be a large aggregate of foreign financing in America this year, the volume and time of offering of securities of this character being mainly dependent upon the development of fav-

orable investment conditions. There are few of the governments of Europe which are not anxious to obtain accommodations there, while most of the South American countries following the slump in their exchanges and as a consequence of current financial and economic distress are looking to the United States for aid. It is also on the schedule that China should obtain a loan from the international consortium, a large part of the actual funds for which will, it is anticipated, be raised there.

Canada is expected to be a rather heavy borrower in the United States, although it seems improbable that the Dominion government as such will figure largely. Various provincial and municipal governments, however, have maturities approaching either in that market, or abroad, the bulk of which will, it is anticipated, be cared for by refinancing, and the National Railways, which are government-owned, will also seek accommodation on the other side of the border, according to the present outlook.

## Coming Offerings

The following is a list of debentures offered for sale, particulars of which have been given in this or previous issues:—

Borrower.	Amount.	Rate %.	Maturity.	Tenders close.
Kamsack, Sask. ....	\$ 13,400	7	15-instal.	.....
Merritton, Ont. ....	30,000	6	20-instal.	Jan. 24
Brampton, Ont. ....	61,139	6 & 6½	Various	Jan. 24
Kenogami, Que. ....	80,000	6	5-years	Jan. 25
Watford, Ont. ....	52,000	6½	30-instal.	Jan. 25
Saskatchewan Prov.	2,000,000	6	15-years	Jan. 27
Gladstone, Man. ....	11,000	6	20-years	Feb. 1
Regina P.S.D., Sask.	250,000	6½	30-years	Feb. 1
Brockville, Ont. ....	143,964	6	10-instal.	Feb. 4

**Brockville, Ont.**—Tenders will be received until February 4, 1921, for the purchase of \$143,964 6 per cent. 10-instalment debentures.

**Brampton, Ont.**—Tenders are being called up till January 24, 1921, on \$5,225,21 6 per cent. 20 and 30-year debentures, and \$55,913.72 6½ per cent. 10 and 20-year debentures. C. M. Corkett, town clerk.

**Merritton, Ont.**—Tenders will be received until January 24, 1921, for the purchase of \$30,000 6 per cent. instalment debentures maturing from 1922 to 1941. The proceeds of the issue will be used for school purposes. R. Clark, town clerk.

**Watford, Ont.**—The village is calling for tenders up till January 25, 1921, for the purchase of \$52,000 6½ per cent. 30-instalment debentures, the proceeds of which issue will be used for installing a water works system. W. S. Fuller, clerk.

**Saskatchewan.**—The province is asking for tenders up till January 27, 1921, for the purchase of \$2,000,000 6 per cent. 15-year bonds. Alternative bids for securities with and without American payment. Tender must be accompanied by marked cheque for \$20,000.

**Orillia, Ont.**—Through A. B. Thompson, a local dealer, the town is offering \$285,000 debentures to its citizens. Mr. Thompson has been given an option on the issue and is offering the bonds to yield 6½ per cent. The bonds are guaranteed by the county of Simcoe and run from one to twenty years.

**Kenora, Ont.**—The town has again extended the date on which tenders will be received for its debentures until February 15, 1921: The debentures, which total \$82,320.25, are

## Reinvest Your January Funds

Bond interest and dividends due January 1st, as well as payments of principal due on that day, will be best employed when invested in Canadian Government and Municipal Bonds.

These bonds afford unquestioned security, and no investment permits of more convenient collection of interest.

At existing prices, from 6.20% to 7% interest can be obtained from these bonds.

Write for a list.

F. J. Hooper, clerk and treasurer.

#### Debenture Notes

**Orillia, Ont.**—Ratepayers have passed a by-law authorizing the erecting of a hospital costing \$210,000.

**Indian Head, Sask.**—The council of the rural municipality has passed a by-law authorizing the borrowing of \$30,000 for the year's expenses.

**Edmonton, Alta.**—The failure of Morris Bros., the Portland bond house, and the resulting inability to take up \$1,595,600 of the city's bonds, has placed the city in an embarrassing and very unpleasant position. Legal proceedings will involve a delay of probably six weeks before the case as to the possession of the securities opens in Portland. Both City Solicitor Brown and City Treasurer Barnhouse have returned from Portland, and have made reports to Mayor Duggan of recent developments in the financial tangle which is so vital to the city. The chief trouble has been caused by the First National Bank filing an interpleader in the state courts. This has the effect of the bank declining to give up the bonds to any of the claimants without formal order to do so. This precaution has been taken by the bank to protect itself against the possibility of future legal actions.

It is stated that the liquidators of the defunct company are using all possible means to take up the remainder of the bonds at Portland. If they succeed in this purpose, there will be a profit to them of possibly \$100,000, which would materially augment the company's assets. In the meantime the city's interests are fully protected against loss, and arrangements have been made with the city's bankers for funds. Nevertheless, the situation is a perplexing one, and a considerable amount of expense and trouble will have to be borne before the case is finally settled.

#### Bond Sales

**Dartmouth, N.S.**—The Royal Securities Corporation has purchased \$100,000 6 per cent. 20-year debentures at a price of 95.63, which is on about a 6.35 per cent. basis.

**Saskatchewan.**—The following is a list of debentures reported sold by the Local Government Board from December 25, 1920, to January 8, 1921:—

**School Districts.**—Laird, \$15,000 12-years, to local investors; Sugar Hill, \$4,500 10-years, to Sturgeon Lake Lumber Co., Prince Albert; Silberfeld, \$800 5-years, Mutual Life Assurance Co.; Columbia, \$3,000 10-years, Waterman-Waterbury Co.; Milner, \$2,000 10-years, R. S. Henry, Rosthern; Robert, \$3,000 15-years, Regina Public School sinking fund; Gauthier, \$4,000 15-years, Walter Martin, Regina; Downey Lake, \$3,500 10-years, Waterman-Waterbury Co.; South Loverna, \$2,000 10-years, Dr. Hunter, Hoosier; Moose Jaw, \$18,500 10-years, local investors; Invermay, \$12,500 20-years, J. A. Thompson; Bright, \$2,500 10-years, Regina public school sinking fund trustees. All 8 per cent. debentures.

**Rural Telephones.**—15-year 8 per cent. debentures: Invermay, \$20,500, R. O. Berwick, Regina; Yarbo, \$4,350, J. I. McVicar, Ltd., Regina; Heron, \$600, Stewart Bros., Maryfield; Viscout, \$11,500, W. D. Craig, Regina; Glen Adelaide, \$2,800, S. L. Platt, Regina; Hohenloe, \$9,500, and Leslie, \$14,800, R. O. Berwick, Regina; Bromhead South, \$4,000, W. H. Houston, Regina; Hyas, \$12,000, G. W. Brown, Saskatoon.

**Alberta.**—A syndicate composed of Wood, Gundy and Co., A. Jarvis and Co. and A. E. Ames and Co. have purchased \$2,000,000 6 per cent. 15-year bonds of the province at a price of 96.21, at which rate the province pays 6.39 per cent. for its money. Alternative tenders were asked for 15-year bonds payable in Canada only, and 10-year bonds payable in New York. Bids were received as follows:—

Fifteen-year bonds payable in Canada only.

Wood, Gundy and Co., A. Jarvis and Co. and A. E. Ames and Co. ....	96.21
United Financial Corp., Ltd. ....	95.40
Dominion Securities Corp., Harris, Forbes and Co. and National City Co. ....	95.147
W. A. Mackenzie and Co., R. A. Daly and Co. and Hanson Bros. ....	93.28

Ten-year bonds payable in New York.

A. Jarvis and Co., First National Co., Halsey, Stuart and Co. and A. E. Ames and Co. ....	101.11
Harris, Forbes and Co., National City Co. and Drake Ballard and Co. ....	99.544
Miller and Co., Housser, Wood and Co., Brandon, Gordon and Waddell ....	99.51
Wood, Gundy and Co. ....	99.29
Dominion Securities Corp. and Dillon, Read and Co. ....	98.97
Continental and Commercial Trust Co., Blythe, Witter and Co., W. A. Mackenzie and Co. and R. A. Daly and Co. ....	98.83
United Financial Corp., Ltd. ....	97.73

**Niagara Falls, Ont.**—An issue of \$58,806.71 5 per cent. 10-instalment debentures has been purchased by the United Financial Corporation, Ltd., at a price of 91.87, which is on about a 6.80 per cent. basis. The proceeds of the issue will be used for paving purposes. R. C. Matthews and Co. submitted a bid of 91.96, while Dymont, Anderson and Co. offered 91.03.

**St. Catharines, Ont.**—Harris, Forbes and Co. and C. H. Burgess and Co. have purchased \$184,000 6 per cent. local improvement debentures, maturing from one to six years, at a price of 97.37, which is on a basis of about 6.85 per cent. Other tenders received were:—

A. E. Ames and Co. ....	97.091
Wood, Gundy and Co. ....	96.63
A. Jarvis and Co. ....	96.30

**York Township, Ont.**—The municipality has disposed of \$262,000 6 per cent. 20 and 25-instalment school and waterworks debentures to the United Financial Corporation, Ltd., at a price of 96.22, which is on about a 6.40 per cent. basis. Tenders received were as follows:—

United Financial Corporation, Ltd. ....	96.22
Wood, Gundy and Co. ....	96.09
A. E. Ames and Co. and the Canadian Bank of Commerce ....	95.86
A. Jarvis and Co. ....	95.402
Dominion Securities Corp. ....	95.147
R. C. Matthews and Co. ....	95.07
Harris, Forbes and Co., Inc. ....	94.347
MacNeill, Graham and Co. ....	94.03

In addition bids were submitted by A. Jarvis and Co., Housser, Wood and Co., and the Canadian Debentures Corporation for separate blocks.

**Barton Township, Ont.**—W. L. McKinnon and Co. have been awarded \$23,743.55 6 per cent. 5, 10 and 20-year debentures, at a price of 97.305, which means that the municipality would pay about 6.35 per cent. for its money. Many tenders were received as follows:—

W. L. McKinnon and Co. ....	97.305
Canada Bond Corp. ....	96.83
C. H. Burgess and Co. ....	96.17
Brent, Noxon and Co. ....	96.11
Wood, Gundy and Co. ....	96.07
Harris, Forbes and Co., Inc. ....	95.877
Nesbitt, Thomson and Co. ....	95.81
R. C. Matthews and Co. ....	95.733
MacNeill, Graham and Co. ....	95.73
Canadian Debentures Corp. ....	95.67
Turner, Sprague and Co. ....	95.43

Dymont, Anderson and Co., bid 96.07 for the five-year bonds, 95.27 for the ten-year and 94.17 for the twenty-year securities.

# Corporation Securities Market

Less Activity on the Stock Exchanges—Bank Issues Command Attention—Grand Trunk Equipment Trust Certificates—Maritime Telegraph Bonds Sold

THE stock markets, both in Montreal and Toronto, were less active this week and inclined to be reactionary. At the close on January 19 prices seemed to be holding up fairly well, but a glance over the lists shows a number of net losses. The removal of the securities embargo was slightly effective, particularly to those issues which are held abroad, but the easiness of the markets as a whole is merely a reflection of the general conditions prevailing. The business situation at present is bare of new developments, and bull traders on the exchanges find very little ground to work upon. Nevertheless, some stocks are moving up, among which utilities are prominent. Papers are still in the background, although the past few days have seen a moderate improvement in these issues.

Bank stocks commanded the most attention during the past week. Nova Scotia, Standard and Royal gave good exhibitions of strength, while Merchants moved down. Commerce made a spectacular advance of fourteen points, but lost the greater part of this before the close. Union was one of those issues which felt the effects of the removal of the embargo, but after the first preliminary liquidation of the shares held in Great Britain, which carried this security down several points, a firmer feeling prevailed and the stock closed with a fractional loss for the week.

Trading figures show that there was less activity. The turnover of listed stocks in Montreal was 48,572, as compared with 66,497 in the previous week, while the turnover in Toronto of listed shares was 14,575, as against 18,790 previously. Bonds changed hands on the Montreal exchange to the extent of \$1,449,290, compared with \$2,556,700 last week, while the Toronto figures were \$1,801,500 and \$2,661,650, respectively.

Fifteen-year equipment trust certificates of the Grand Trunk Railway have been disposed of by Dillon, Read and Company and associates to the extent of \$12,000,000 in the United States. The securities cannot be called before maturity, but their retirement is provided for by semi-annual sinking fund payments of \$400,000, sufficient to cover the entire principal during the life of the issue. Sinking fund payments must be devoted to the purchase of certificates up to par. Balances of the sinking fund payments not so used up in any six months must then be devoted to the purchase either of certificates of this issue at the market or of Canadian government securities maturing before the maturity date of the certificates.

Grand Trunk Railway is now a part of the Canadian National Railways, and under the railroad law of Canada rentals payable for the use of the equipment covered by the lien of these certificates, including interest and instalments of principal, rank as a working expenditure of the railways ahead of the claims of mortgage bondholders on the earnings of the road. The certificates are thus practically guaranteed by the Canadian Government.

The coupon rate of interest is 6½ per cent., and the offering price of 95.40 represents an interest yield of 7 per cent. Associated with Dillon, Read and Co. in the offering were National City Co., Blair and Co., Bankers Trust Co., Guaranty Trust Co., Lee, Higginson and Co., Continental and Commercial Trust and Savings Bank of Chicago.

## New Offerings

A considerable portion of the 12,786 shares of the Consumers' Gas Company, of Toronto, was taken up jointly by two financial houses, viz., Osler and Hammond and the United Financial Corporation, Ltd., and the shares, which have a par value of \$50, were sold to the Toronto public to yield 8 per cent. At the rate of the present dividend (10 per cent. per annum) the stock would bring a price of \$62.50 per share.

Harris, Forbes and Co., Inc., and the Royal Securities Corporation have disposed of \$500,000 7 per cent. refunding mortgage gold bonds of the Maritime Telegraph and Telephone Co., Ltd., at a price of 97.50, to yield 7.25 per cent. The Maritime Telegraph owns and operates, without competition, the telephone system in the province of Nova Scotia and controls the telephone business in Prince Edward Island. Its lines connect with the New Brunswick Telephone Company's system and it has other connections under favorable agreements for long distance business. The total population served is considerably more than 500,000. Net earnings of the company for the year ended November, 1920, were \$332,708, or more than double the annual bond interest charges. The book value of the physical assets of the company is over \$5,000,000, or twice the amount of bonds outstanding, including this issue.

The Dominion government has authorized the L. R. Steel Co., Ltd., to increase its capitalization from \$2,000,000 to \$8,000,000 by the issue of 40,000 preference shares of \$100 each and 20,000 shares of common stock of \$100 each.

The Metallic Roofing Company of Canada, Ltd., Toronto, has been authorized by the Dominion government to increase its capital from \$200,000 to \$1,000,000 by the issue of 1,600 shares of \$500 each.

A circular has been mailed to shareholders of the Windsor Hotel Company enclosing a form of option in favor of the Crown Trust Company or its nominee, signed by the directors of the hotel and recommended by them. The form reads, in part: "It is a condition of the exercise of this option that the Crown Trust Company or its nominee shall purchase the shares of all other shareholders of the Windsor Hotel Company of Montreal who may desire to sell the same at the price of \$175 a share."

All payments are to be made in Montreal funds. The form further states that the regular quarterly dividend of 1½ per cent. may be declared and paid until the present option has been exercised, provided that the next quarterly dividend shall be payable March 1 to shareholders of record February 24.

**CONTINENTAL AND FIDELITY-PHENIX EMPLOYEES**

The employees of the Continental Insurance Company, of New York, and the Fidelity-Phenix Fire Insurance Company, of New York, whose joint Canadian head office is operated at 17 St. John Street, Montreal, under the management of Mr. W. E. Baldwin, received on December 24 an amount equal to 10 per cent. of the salary paid them during the year 1920.

**BANKRUPTS AND AUTHORIZED TRUSTEES**

A reprint of the "Canada Gazette" has just been published, showing the notices of appointment of trustees under the Dominion Bankruptcy Act from July 1, 1920, up to November 27, and also the notices to creditors. From the latter a fair idea of the nature of the firms coming under the operation of the act may be obtained. They include:—

Synthetic Rubber and Tire Co., of Canada, Ltd., Toronto; Empire Traction Co., Ltd., Edmonton; Pathe Freres Phonograph Co. of Canada, Ltd., Toronto; Hyde Shoe Manufacturing Co., Ltd., Toronto; Royal Supply Co., Calgary; Phonograph Specialties, Ltd., Montreal; Gibson Lumber and Shingle Co., Ltd., Ahusat, B.C.; Eastern Ladies Wear Mfg. Co., Montreal; Dominion Food Products Co., Ltd., Guelph; Dominion Shipbuilding and Repair Co., Ltd., Toronto; Stewart Mercantile Co., Ltd., Stewart, B.C.; Canadian Ferro Alloys, Ltd., Shawinigan Falls; Toronto Cement Products Ltd., Toronto; Getty Shoe Co., Kitchener; Capital Broom Co., Regina; Gulf Islands Fishing and Canning Co., Vancouver; Dominion Fibre Co., Guelph; Acme Leather and Supply Co., Montreal; F. R. Oliver Mfg. Co., Toronto; Century Mfg. Co., Montreal; Consolidated Fish and By-Products Co., Ltd., Heriot Bay, B.C.; Eagle Shingle Co., Ltd., Dewdney, B.C.; Rideau Steamboat Co., Ltd., Ottawa; Peerless Rubber Co., Ltd., Toronto; N. Brenner and Co., Ltd., Toronto; Canadian Fisheries and Storage Co. Ltd., Port Stanley; International Motors, Ltd., Vancouver, B.C.; Ideal Glove and Mitt Works, Montreal.

**WESTERN HOMES, LIMITED, REPORT**

The eleventh semi-annual dividend at the rate of 7% per annum, announces M. Willis Argue, president of Western Homes, Ltd., which will hold its annual meeting on January 27. The company was organized and started business in 1915. On account of the unsettled conditions it was decided to proceed with a small organization. By the time the authorized capital (\$1,000,000) was fully subscribed, it was found that business had increased substantially, and it was deemed advisable, therefore, to provide more capital. At a special meeting of the shareholders in September last it was decided to increase the authorized capital to \$5,000,000, and to offer 10,000 shares to shareholders and other investors in Manitoba. Applications for more than 2,000 shares have been accepted by the board, and it is anticipated that the whole issue will be taken early this year. The intention is to expand from time to time as conditions and circumstances warrant until the capital has reached \$5,000,000. With regard to home building, Mr. Argue announced that it was still the intention of the company to assist men who are building homes to buy their material, supply labor and supervise their work. This assistance will be given only to those who require it and a nominal fee will be charged for the service rendered.

The officers and directors of Western Homes are: M. Willis Argue, president and manager; W. Redford Mulock, K.C., and David J. Dyson, vice-presidents; Ralph C. Duncan, secretary-treasurer, and Wm. Owen Jefferies, Malcolm McInnes, Wm. A. Bremer and Edwin J. Brownlee, directors.

**PROGRESS OF NATIONAL LIFE ASSURANCE CO.**

Up to the present time few reports of life insurance companies' operations in 1920 have been submitted to the public, but those which have appeared indicate clearly the progress made in this field last year. The annual report of the National Life Assurance Co. is a good illustration. New assurances issued and revived in 1920 amounted to \$7,501,852, an increase over the previous year of \$2,261,500. The actual cash receipts amounted to \$1,280,558, being \$181,055 in excess of the 1919 figure. Reserves for protection of policyholders were increased \$324,079 to \$4,298,456, while a surplus of \$466,081, including paid-up capital of \$250,000 for additional protection of policyholders, showed an increase of \$45,992.

The progress of the National Life is illustrated by the following figures:—

	Assets.	Business in force.
1902	\$ 199,071	\$ 3,425,897
1911	1,740,701	14,453,866
1914	2,886,717	21,908,408
1917	3,755,420	22,686,816
1920	5,179,182	30,806,390

The assets of the company are made up largely of Dominion and provincial government and Canadian municipal debentures. These securities have a par value of \$4,375,806, but are shown in the statement at book value of \$3,934,496.

**TORONTO GENERAL TRUSTS ATTAINS ANOTHER RECORD**

The Toronto General Trusts Corporation's statement for 1920 shows estates trusts, etc., at \$100,248,237, as against \$87,763,834 last year. Trust funds for investment and distribution amount to \$31,112,579, compared with \$27,885,791 at the end of 1919. The guaranteed trust account is slightly lower at \$9,124,317.

Capital account shows that the paid-up capital now stands at \$1,726,960, as compared with \$1,500,000 previously. The reserve fund has been increased by \$250,000 to \$2,250,000.

Gross profits for the year increased in accordance with the increase in the business handled by the company, the figure being \$820,269, compared with \$757,338 for 1919. Net profits, after allowing for administration expenses, advertising, rent, taxes, etc., totalled \$353,713, which, added to the amount of \$265,529 brought forward, and \$171,395 premium on a stock issue of \$500,000 made during the year, left \$790,638 for distribution. Out of this two quarterly dividends at the rate of 10 per cent. per annum, and two at the rate of 12 per cent. per annum were paid to shareholders, while a bonus of one per cent. was also declared. A balance of \$293,163 was carried forward.

The Toronto General Trusts Corporation is the oldest trust company in the Dominion, having been formed in 1882, and the close of 1920 marks another step in its rapid progress. In 1912, when the corporation had been in business for thirty years, the total assets under its care amounted to \$50,000,000; whilst at the end of 1920, eight years later, another \$60,000,000 had been added.

**TEMISKAMING AND NORTHERN ONTARIO RAILWAY**

Net earnings of \$298,842 for the year ended October 31, 1920, are reported by the Temiskaming and Northern Ontario Railway, compared with \$53,153 in the previous year. In addition, about \$250,000 of back-wages had to be paid under the McAdoo award, and some other debts met. Gross revenues during the year 1920 were, according to the report, \$4,187,573, as compared with \$3,207,708 in 1919, an increase of nearly a million dollars. Expenditures on way and track maintenance during the year were \$813,763, as compared with \$718,431 in 1919. Rolling stock maintenance cost \$770,620, as against \$594,401 in 1919.

# Corporation Finance

**Gordon Ironside Interest Default Explained—Montreal Telegraph Statement Void of Important Changes—English Syndicate to Take Over Davidson Gold Mines—Canadian Western Natural Gas Company Had Loss Last Year**

**Dominion Bridge Company, Ltd.**—At the annual meeting of the company last week it was announced that the company had financed its new subsidiary, the Canadian Tillsoil Farm Motors, Ltd., by the purchase of 500 shares of preferred stock at the par value of \$100 a share and 10,000 shares of common stock of no par value at \$5 a share, or a total of \$100,000. The company owns the whole stock of this concern. Reference was made to an increase of the present dividend of 8 per cent. by a shareholder, but the reply of the president, G. H. Duggan, did not encourage the idea at the present time. He said that while the directors would not forget this, the present was an occasion where caution was required.

**North American Pulp and Paper Company.**—The reorganization of the North American Pulp and Paper Co. Trusts will take place at the annual meeting of the company, which has been called for February 8 at the Ritz-Carlton Hotel. It is proposed to authorize the trustees to sell the assets for an equivalent of \$6 (American funds) per share of common stock after redeeming the preferred. For each ten old shares of N.A. Pulp held will be offered in exchange one preferred share and four common shares of \$10 par value in the Saguenay-Pulp and Power Co.

The trustees also desire to be authorized, in the event of their being unable to effect such a sale, to sell sufficient of the trust estate to provide funds for the redemption of the preferred stock and expenses, and to distribute the remainder ratably among holders of the common stock. The Saguenay Company is applying for permission to subdivide its preferred and common shares, which are of par value of \$100, into shares of \$10 par, so as to more easily convert.

**Canadian Western Natural Gas, Light, Heat and Power Company, Ltd.**—According to the report of the company for the year ended September 30, 1920, which will be submitted at the annual meeting at Calgary, Alta., on January 26 next, the number of consumers supplied at the end of the year was 12,118, an increase of 277, or 2½ per cent. over the number supplied in the previous year. The total consumption of gas decreased during the year 55,310,000 cubic feet, or 16¼ per cent., one-sixth less than in the preceding year. Service for industrial purposes has been practically discontinued, forming now only about 1½ per cent. of the total. The average prices on rate obtained for the gas during the year were 34½ cents for the total consumption, 35 cents for the domestic, and 16¼ cents for the industrial. The rates have been inadequate to properly sustain the business of the company. The supply of gas to Calgary, Lethbridge and other towns and villages on the company's mains is seriously threatened through the lessened output of the Bow Island field, now over eight years old, and an advance in rates is imminent if the gas fields are to be developed and the present pipe lines extended. An application for new rates has brought in response from the municipalities affected, and the company has consequently had to discontinue its search for new gas fields. The directors are confident that if they are shortly placed in the position of charging a fair and sufficient price for their output it will be possible to secure a gradually enlarged supply from several new fields. The net loss on operations the past year was \$101,607.

**Montreal Telegraph Company.**—The financial statement of the company for the year ended December 31, 1920, is void of any important changes. The company's property, valued at \$2,151,823, is unchanged as compared with a year ago, while liquid assets of \$163,663 are a few hundred in excess of 1919. The contingent fund has been increased slightly at \$122,720.

The company's property alluded to in the foregoing statement was taken over in 1881 by the Great North Western Telegraph Company, now controlled by the Dominion, and

operated with its railway system under the management of its Canadian National Railway Company in conformity with the terms of the agreement with that company and the Western Union Telegraph Company, adopted at a general meeting in August of that year. The agreement provides for the operation and maintenance of the property by the Great North Western Telegraph Company, as well as the payment of dividends. Operation, maintenance and payments are guaranteed by the Western Union Telegraph Company. The agreement is for a period of 97 years from July 1, 1881.

Out of the revenue (8 per cent. on the company's capital) derived from the operation of the company's property by the Great North Western Telegraph Company dividends were paid to shareholders to the extent of \$160,000. From the revenue derived from the investment of the company's contingent fund the annual bonus, amounting to \$5,000, was distributed to shareholders.

**Davidson Consolidated Gold Mines, Ltd.**—At a meeting of shareholders of the company in Toronto this week a decision was reached to sell the stock to an English syndicate. The syndicate has purchased 1,000,000 shares of treasury stock at 75 cents a share and will buy in the outstanding stock in the hands of the shareholders at \$1.18 a share. The intention is to reopen the mine on March 1 with ample funds to carry on work and erect a 500-ton mill. The money necessary to the deal is all to be paid by the end of March, the proposal having been changed to cash from the previous option plan.

The financial statement of the mine showed assets of \$4,057,265, made up of plant and equipment, \$74,401; developing expenses, \$237,660; gold receipts since last meeting, \$17,069; and property, \$3,556,810. The liabilities total \$57,260, and the largest item is \$31,121, which was money advanced by F. C. Sutherland and Co.

**Gordon Ironside and Fares Company, Ltd.**—An explanation of the default of the company, on its bond interest, due January 1, has been made in a circular from the company to the Standard Trusts Co., of Winnipeg, trustee, and forwarded with a covering letter by the Dominion Securities Corporation, Toronto, to parties interested. The company's circular sets out that there was a deficit for the year ended February 28, 1918, and arrangements were made with the Harris Abattoir Co., Ltd., of Toronto, to lease the company's plants and operate them by means of a new company called "Gordon Ironside and Fares Packers, Ltd.," of which the Harris Co. holds a majority of the stock, and the original Gordon Ironside and Fares the balance.

The plants and equipment were leased for five years at a rental of \$76,000 yearly, but the new company was unfortunate from the beginning, making heavy losses, the worst blow being the rejection in the first year of almost 10,000,000 pounds of beef by the British Ministry of Food, making a loss on one transaction of nearly \$500,000. Subsequent extraordinary conditions caused further losses aggravated in the fall of 1920 by the great decline in general inventory values.

A financial statement subjoined shows that out of a total bond issue for \$1,907,600, \$902,300 had been retired by sinking fund, leaving \$1,005,300 outstanding. From this should be taken \$81,407 mortgage investments and \$1,285 cash, leaving balance of \$922,608, required to redeem outstanding bonds. The statement shows assets of \$1,988,080, made up of company's plants, ranches and retail stores, thus leaving a surplus of \$1,065,472 above the bonded debt.

In their covering letter, the Dominion Securities Corporation say, in part: "While the company's position is unfortunate, we are hopeful that the negotiations now under

way will result in the operation of the enterprise by the Harris Abattoir Co. interests on some mutually satisfactory basis, pending the return of better business conditions in the packing industry in the west. We have always regarded the security for the outstanding bonds of the Gordon, Ironside and Fares Co. (now \$1,005,300) as ample, in view of the large amount of real estate, plants and buildings specifically mortgaged. While we do not think the undertaking in the event of forced liquidation would realize the surplus indicated in the company's letter above mentioned, we feel that the principal represented by the outstanding bonds should be safe, unless some extraordinary developments should occur. In the meantime, pending the conclusions, negotiations now on, and the calling of a meeting of the bondholders, we shall do our utmost, in co-operation with the trustee, to safeguard your interests."

**Barcelona Traction, Light and Power Co.**—At the annual meeting of the company in Toronto this week, the position of the company was fully discussed, and the policy of the directors outlined. In the absence of E. R. Peacock, president, vice-president Miller Lash presided over the meeting. One change took place in the directorate, E. A. Macnutt, treasurer of the Sun Life Assurance Co., replacing T. B. Macaulay, president of the Sun Life, at the request of the latter. The chairman explained conditions during 1920, which could not be referred to at length in the company's report for 1919 before the meeting. Some of the new information given was favorable, while other things were not. About the middle of last year, the company completed two units of the new power development at Camerassa, but, owing to the slowing down of business in Spain, as elsewhere, the new power had not found a ready market as yet. It was expected that this would improve as conditions settle down. Labor matters were improving, as, since the social revolution attempted last year, directed by Lenin, the extremists in the labor party had split, and a new strong civil government has been deporting the worst of them from the country. The changed attitude of the government toward labor was considered a favorable development.

Advantage had been taken of the condition of exchange to pay off a series of debentures held in France, and on this transaction the company profited to the extent of £900,000, the money being raised through a syndicate in Great Britain. A cable just received from Mr. Peacock stated that labor is quiet, and business is good at Barcelona. The failure of the Bank of Barcelona recently, however, had closed the market for the sale of securities for the time being. The company did not lose anything through the bank's failure, its deposits with the bank not amounting to anything. The failure of the bank and disturbance resulting therefrom had depressed Spanish exchange, and, in the meantime, to that extent reduced the company's earnings, which were based on exchange at par.

Higher rates had been secured from many light customers, and some progress had been made in raising the rates for power. Revenue from power sources will improve as business picks up. The only present extension proposed is seven miles of railway which, it was thought, would finance itself. Net earnings for 1920, estimating the figures for December, would show a good increase, being placed at 20,788,619 pesetas, compared with 15,746,216 in 1919.

Following the regular meeting, a special general meeting was held, at which several changes in the company's organization were made. A new by-law of the directors was ratified, removing the compulsory feature which had provided for the redemption of a certain amount of preferred stock each year. This provision had, in fact, not been observed, at least of late years, and, following the securing of the consent of all the preferred shareholders, the change was made, coupled with a provision that the company may, however, redeem preferred shares at 110 at any time it sees fit to do so. Another change involved provides that preference shareholders shall share pro rata with common shareholders in any surplus for distribution, thus making the preference shares participating.

## MIDLAND LOAN AND SAVINGS COMPANY

The Midland Loan and Savings Co., which has its head office at Port Hope, Ont., has just submitted its report for the year ended December 31, 1920, showing that the company had a successful twelve months. Mortgage loans increased from \$900,272 to \$910,307, while holdings of government, municipal and other bonds are shown at \$578,374, as against \$578,142 at the end of 1919. Cash in banks and on hand at the end of the year amounted to \$154,002, compared with \$84,781, previously reported.

As a result of increased business, earnings, rents and miscellaneous receipts totalled \$120,283, being an advance of \$24,211 over 1919. In addition to the regular dividend of 8 per cent., a bonus of  $\frac{1}{2}$  of 1 per cent. was distributed to shareholders. The reserve fund was increased \$15,000 to \$300,000, and is now 90 per cent. of the paid-up capital of \$360,000. Thomas Wickett, president, in his report, states that mortgage instalments, both principal and interest, have been exceptionally well met during the year.

## SHUTDOWNS AFFECT PAYROLLS

Dominion headquarters of the Employment Service of Canada, Department of Labor, reports that there was another pronounced decrease in employment during the week ended December 24, 1920, when it was reported by 4,742 firms that they had released 17,484 persons, a contraction in payroll of nearly three per cent. Firms in two industrial groups registered additions to their payrolls totalling 1,232 workers, but in thirty-one groups there were declines aggregating 18,716 employees. It is interesting to recall that during the week ending December 27, 1919, there was also a marked decline in employment, nearly 14,000 persons being released during that week, the decrease in both cases being largely due to shut-downs for Christmas holidays and for inventory purposes. The figures used in these reports do not include loss of time due to industrial disputes.

Employers in all provinces report shrinkages in payrolls, the decrease of 8,139 persons in Ontario being especially substantial. For the following week, moreover, further large decreases were anticipated in every district. Employment in Nova Scotia, Prince Edward Island, Manitoba and Alberta was still at a higher level than on January 17, 1920, the base week, but in the remaining sections decided declines were registered. The only net increases in employment recorded during the week of December 24 occurred in local transportation and retail trade. In the latter group the expansions in payroll were of course due to Christmas activity in stores, largely in Ontario but in lesser degree in the other provinces. In local transportation the increases in staffs which occurred largely in Manitoba were to assist in snow removing.

The most pronounced contractions in payrolls were recorded by firms in logging, sawmills, in the crude, rolled and forged, railway car and shipbuilding divisions of iron and steel, in pulp and paper manufacturing and printing plants, in the hosiery and knit goods, garment, thread, yarn, cloth and bedding manufacturing branches of the textile group, and in building construction. In many cases these decreases may be attributed to shut-downs for holidays and inventory purposes. In sawmills and building construction the declines were seasonal in character, as were also the smaller losses recorded in railway construction. In addition to the reductions noted above, there were shrinkages in payrolls in abattoirs, telephone operation, brickmaking, confectionery, canning, leather and tobacco factories, in the coal and non-ferrous metallic ores divisions of mining and in railway and water transportation, the declines in many of these groups being due to the causes already mentioned. Further substantial losses were anticipated for the following week in practically all these groups except logging, in which considerable recovery was expected.

## RECENT FIRES

**Largest Fire This Week** was at Sydney, N.S., Where There was a Loss of \$200,000—Halifax, Whiby, Ont., Caribou, N.B., and Sarnia also Suffered Heavy Losses

**Beamsville, Ont.**—January 19—Factory of the Beamsville Basket and Vener Co. was destroyed by fire. The loss is \$40,000 with \$11,000 insurance.

**Caribou, N.B.**—January 8—The Ritchie Block in Water Street was damaged by fire with a loss of \$50,000, partly covered by insurance.

**Galt, Ont.**—January 19—Fire starting in the plumbing shop of W. H. Pinkett, West Main Street, did \$2,000 damage to the shop and adjoining buildings.

**Halifax, N.S.**—January 19—Fire, caused by a defective wire, did \$150,000 damage to the hardware store of Morton and Thompson, Sackville Street. There was \$63,000 insurance.

**Hull, Que.**—January 17—Fire, caused by some sparks from an electric motor, destroyed the mattress factory of J. E. Larose, 139 Montcalm Street, causing damage estimated at \$10,000.

**London, Ont.**—January 17—Fire of unknown origin did considerable damage to the east pavilion of the Byron Sanitarium.

**Maidstone, Ont.**—January 13—Fire caused by a hot journal spreading flames to oil and flour dust completely destroyed the grain elevator and chopping mill owned by Vincent McCloskey and George Grondin.

**Montreal, Que.**—January 17—M. A. Bradshaw's box factory, situated at 1483 Chateaubriand Avenue, was destroyed by fire.

**Narcisse, Man.**—January 12—The warehouse of the Narcisse Trading Co. was damaged by fire. The loss is \$10,000.

**North Sydney, N.S.**—January 10—Damage estimated at \$25,000 was caused by fire which destroyed the warehouse and stables of Malcolm J. Ross.

**Ottawa, Ont.**—January 16—A fire, believed to have been caused by electric wiring, did \$5,000 damage to the Royal Ottawa Golf Clubhouse on the Aylmer Road.

January 18—The flax building at the Experimental Farm was damaged by fire. The loss is estimated between \$10,000 and \$15,000.

**Paris, Ont.**—January 15—Palace Rink was destroyed by fire. The fire, which was caused by a cigar stub, caused \$20,000 damage, with no insurance.

**Sarnia, Ont.**—January 17—Fire of mysterious origin totally destroyed Brown's icehouses along the bank of the St. Clair River, causing a loss of \$40,000. The loss is covered by insurance.

**St. Thomas, Ont.**—January 1—Fire, originating from defective electric wiring, did considerable damage to the storeroom of the Neal Baking Co.'s plant.

**Stratford, Ont.**—January 7—The Classic City Bakery, situated on Ontario Street, was damaged by fire. The loss is \$2,000.

**Swift Current, Sask.**—January 10—The city hall was destroyed by fire with an estimated loss of \$65,000, while the building and contents were only insured for \$23,500.

**Sydney, N.S.**—January 14—The Inghram Block on Charlotte Street was destroyed by fire. The loss is estimated at \$200,000, with insurance as follows: Travis Block, \$50,000; Faulkner Block, covered; Travis music store, \$2,500; McDonald's shoe store, \$45,000; co-operative store, covered; pool room, \$6,000; bowling alley, \$5,000; A.O.H. Div., \$1,000; McIntosh and Lebbetter, \$2,500; McLeod, \$1,000; Greenshields, \$1,000; Steckler, covered; Jos. Woodill, not covered.

**Toronto, Ont.**—January 7—A fire broke out in the basement of the United Jobbing Building at 76-78 York Street and caused damage of approximately \$60,000.

January 11—The cottage at 19 Power Street, owned by Alfred Simms, was destroyed by fire. The fire was caused by a lamp exploding. Mr. Simms was burnt to death.

**Toronto, Ont.**—January 15—With a loss estimated at \$24,000, the premises of the Transparent Rubber Goods Co., 1555 Danforth Avenue, was destroyed by a fire caused by an explosion.

January 18—Apartments at 868 Dundas Street East were damaged by a fire caused by an explosion of a coal oil stove. The loss is \$400.

**Upper Cross Creek, N.B.**—January 12—The lumber mill belonging to Gordon G. Scott, of Fredericton, was destroyed by fire. The loss is estimated at \$25,000, partly covered by insurance.

**Whiby, Ont.**—January 13—The infirmary at the Ontario hospital was destroyed by fire. The loss is estimated at \$60,000.

## ADDITIONAL INFORMATION CONCERNING FIRES

**Hamilton, Ont.**—December 17—Calvin Presbyterian Church was damaged by fire, which was of incendiary origin. The loss is \$2,200, with insurance of \$2,000 in the Royal Insurance Co.

**London, Ont.**—December 13—The fire in the Aged Women's Home resulted in a loss of \$300 on building, with insurance of \$20,000, and a loss of \$114 on contents, with insurance of \$10,000.

**Quebec, Que.**—The following information is supplied by the chief of Quebec fire department regarding the fire which started in the shoe store of L. Deschenes on December 9:—

	Insurance.		Loss.	
	Building.	Stock and fixtures.	Building.	Stock and fixtures.
L. Deschenes .....	\$ 7,000	\$ 9,000		Total loss.
E. Sewell Estate ..	6,000	.....	\$3,686	.....
Mrs. J. J. Smith ..	13,000	5,500	1,275	\$3,075
A. O. Pruneau .....	.....	10,000	.....	9,000
M. Leonard .....	8,000	.....	460	.....
R. Fallis .....	.....	3,000	.....	1,616
M. Dionne .....	.....	1,000	.....	200

**Manitoba.**—During the month of November 150 fires occurred in the province with a loss of \$342,187. There were 44 dwellings damaged, 40 farm buildings, eight stores and five wholesale warehouses. Defective stoves and furnaces caused 24 fires, spontaneous combustion four.

**New Carlisle, Que.**—December 5—House and contents belonging to Hon. John Hall Kelly, K.C. The loss on contents is \$40,000 and \$25,000 on building. There is insurance of \$13,000 in the Northern Assurance Co.

**St. John's, Nfld.**—December 7—Bakery, plant and stock of the Trade Bakery, Ltd., was damaged by fire. The loss on contents is \$54,000 and on building \$75,000. There is insurance of \$50,400 in the following companies: British Traders Insurance Co., Ltd., Liverpool and London and Globe, General Fire Assurance Corporation, Continental Insurance Co., Fidelity-Phenix, Nova Scotia Fire Underwriters Agency, Union Assurance Society, Ltd., Yorkshire Insurance Co., Law Union and Rock, Baloise, Fidelity-Phenix, Atlas, Alliance, British America, Eagle, Star and British Dominions, Continental, Guardian, Hartford, Liverpool and London and Globe, General Fire Association, Nova Scotia Fire, Norwich Union, Union Assurance Society, Yorkshire Insurance Co., Phoenix Insurance Co.

**Sydney, N.S.**—November 22—Department store of J. F. Merchant and Sons was damaged by fire. Estimated damage to building, \$10,000, and to stock, \$80,000. Insurance carried, \$173,000.

**Sydney Mines, N.S.**—December 15—General store and hotel were damaged by fire. The fire started around the kitchen stove. The loss is \$23,000, with insurance of \$8,000 in the Royal Exchange, Scottish Union and National, Mutual Fire Association.

**Winnipeg, Man.**—On December 14 two hotels and a restaurant, situated at 507-517 Main Street, were damaged by fire. The fire was caused by a defective chimney. The total loss is \$18,168, with insurance of \$34,600.

**Wolfville, N.S.**—December 1—The College Hall, part of Acadia University, was damaged by fire. The loss on contents is \$25,000 and \$100,000 on building. There is insurance of \$45,000.

## Health and Accident Features in Life Policies\*

Proposed Amendment to Dominion Insurance Act Would Permit Life Companies to Write Other Classes of Business—Fire and Casualty Companies Could Also Enter Life Field—Separation of Funds for Protection of Different Classes of Policyholders—Some Suggestions for Companies

By H. R. STEVENSON

General Manager, Crown Life Insurance Co., Toronto

THE question of life companies issuing health and accident contracts has just recently come within the range of practical politics as the result of an amendment to the Dominion Insurance Act, which has been prepared, and which is almost certain to become law at the next session of parliament, with whatever changes may be decided upon in the meantime. The amendment permits insurance companies, under certain conditions, to issue any or all classes of insurance contracts. This amendment is the suggestion of the Superintendent of Insurance, Mr. Finlayson. He is actively promoting it, and endeavoring to mould it into a form that will be the most acceptable to all concerned.

The change proposed is quite a drastic one and likely to have far-reaching results, and yet, so far, very little public discussion of it has taken place. In fact, the terms of the amendment appear to be unfamiliar, even to many officials of the companies directly involved. It is with the purpose in view of presenting the situation to the members of the Insurance Institute that I consented to prepare this paper.

### Life Business Specialized

At the present time in Canada, as we all know, the business of life insurance is conducted almost entirely by companies which confine their operations to it, because, ever since the year 1882, no Dominion license has been granted to a company to carry on the business of life insurance in combination with other classes. There are, however, a few companies, notably the Travelers Life, of Hartford, and the Royal Insurance Company, of Liverpool, still operating under renewal of licenses granted prior to that date which issue other kinds of policies as well as life policies.

This situation is in striking contrast to the situation in Great Britain, where licenses are issued to include widely different classes of insurance, so that composite companies are there the rule rather than the exception.

In the United States the laws of many of the most important states permit a greater variety of classes of insurance to be transacted by one company than is permitted by the law of Canada, although there is less latitude in this respect than under the law of Great Britain. For example, in New York State a company may secure a license to transact both life and accident insurance, but it cannot combine life with fire insurance, nor burglary with marine insurance.

There is one important provision in the Canadian Act, which was amplified into its present form in 1917, permitting

life companies to guarantee as a feature of their policies a very substantial benefit in the event of the policy holder becoming totally and permanently disabled. This has become a very popular feature, both in Canada and the United States.

### Double Indemnity Contracts

The question of double indemnity contracts is also of interest. Under the ruling of the American State Departments these contracts are classed as orthodox life insurance contracts, and a company holding a life insurance license is permitted to issue them as a matter of course. But under the ruling of the Canadian Insurance Department the double indemnity feature is classed as an accident insurance contract, so that a company holding a Dominion life insurance license is not permitted, under the existing law, to issue double indemnity contracts in Canada.

It should also be mentioned here that companies incorporated by a province, such as Ontario, are permitted to undertake any classes of insurance in combination, excepting only a combination of life and fire insurance.

The amendment to the Canadian Insurance Act now proposed creates a situation most nearly resembling that which exists in Great Britain, although, as we shall discuss later, the two situations are by no means identical.

The superintendent evidently has several objects in view which have led him to advocate this amendment. In the first place, it will enable the life companies to issue personal accident and health contracts in conjunction with their life policies, thus affording the policyholder a complete insurance of his person by a single operation. The feeling is that these classes of insurance are so closely related that they can best be handled by the one company and by the one agent. I believe his hope is that under the new arrangements the benefits of accident and health insurance can be provided with greater facility and at lower cost to the public than has been possible heretofore. Whether that expectation will be realized or not remains to be seen. I think, however, that all present here are alive to the necessity of searching for ways and means whereby the cost of every kind of insurance can be reduced.

### Separate Funds for Different Classes

The first change which the amendment proposes is to repeal Sections 8, 9 and 10 of the present Act, which prevents a license being granted to a company to carry on the business of life insurance in combination with any other class of insurance, and to substitute the following provisions: "The license may authorize the transaction of such class or classes of insurance, whether mentioned in this Act or not, as the Minister may deem proper; provided, however, that,

\*An address before the Insurance Institute, Toronto, January 26, 1921.

subject to the renewal of licenses granted before the passing of this Act, no company shall receive a license for life insurance in combination with any other class of insurance unless it maintains in respect of its business of life insurance separate and distinct funds and securities available only for the protection of the holders of its policies of life insurance and not liable for the payment of claims arising from the other class or classes of business which the company transacts."

The important point to notice here is that not only is a separate life insurance fund to be maintained, but the actual moneys and securities which comprise the assets of that branch must be earmarked and kept separate. This is a departure from the provision in Great Britain, where separate funds are most strictly maintained, but the actual physical assets are not separated. It is questionable whether the amendment as it now stands should not be changed in conformity with the British Act. The only advantage to be gained from a separation of the physical assets would be a greater convenience in winding up the affairs of one of the branches separately. This problematical advantage is far outweighed by the very obvious inconveniences which such a system would entail.

It may be well to point out here that the separation of funds provided under the amendment or under the British law is a different matter from merely keeping separate accounts, such as all life companies keep of the participating and non-participating sections of their business. But these sections are not two individual legal entities. The one could not be wound up without winding up both.

#### Policies Also to be Distinct

The second change which the amendment proposes is in Section 13 of the Act, which will be made to read as follows: "A contract of life insurance shall not be combined in one policy with a contract for any other class of insurance." If, therefore, an applicant applies for life insurance and other insurance at the same time, a separate contract will be issued for the life insurance, but any other kinds of insurance may be combined in one contract.

#### Conditions for Expanding Business

The third change which the amendment proposes is to add to Section 77 four new subsections, Nos. (2), (3), (4) and (4a), to define the conditions under which a life company can set up other branches. These new subsections are as follows:—

"(2) If the said by-law, in the case of a life insurance company, authorizes the transaction of a class or classes of insurance other than life insurance, the Treasury Board shall require as a condition of its sanction of the said by-law that the company shall keep separate and distinct accounts and create and maintain separate and distinct funds in respect of its business of life insurance and in respect of the said other class or classes of insurance, and the said funds shall be liable only for claims and losses arising from the class or classes of insurance in respect of which they are respectively maintained.

"(3) The amount of the said separate and distinct fund to be maintained in respect of the class or classes of insurance business, other than life insurance, shall be fixed by the Treasury Board, and shall depend on the number and nature of the additional class or classes of business so authorized, but shall in no case be less than fifty thousand dollars.

#### Use of Shareholders' Surplus

"(4) For the purpose of creating the separate and distinct fund mentioned in subsection two hereof, the company may, by by-law, transfer as much fund, or as part of such fund, the whole or any portion of the balance standing to the credit of the shareholders' surplus account, or, if duly authorized by by-law passed by the directors and approved by at least a two-thirds vote of the members present or represented at a special general meeting of the company duly called for that purpose, transfer as the said fund or as any part thereof an amount not exceeding twenty-five per cent. of the surplus of the company, or the sum of one hundred thousand dollars, whichever is the less; provided, that for the

purpose of this subsection the word 'surplus' shall be held to mean the excess of assets over the aggregate of the company's liabilities to its policyholders, the amount of the paid guarantee capital, if any, the contingent apportionment of surplus to deferred dividend policies and provision for dividends accrued on quinquennial participating policies on the same scale as that used in the apportionment of surplus to deferred dividend policies of the same duration.

"(4a) If any portion of the said separate and distinct fund is created by a transfer from the surplus of the company, the by-law shall provide that a proportion of the profits of the said fund equal to the proportion which the amount so transferred bears to the total of the said fund shall thereafter be credited to the life insurance fund of the company."

#### Creates New Company in Effect

The result of these provisions is that if a life company decides to undertake any additional class of insurance, then what is to all intents and purposes a new company is created as an offspring from the parent company. A rib is extracted from the parent's anatomy, namely, the initial fund of \$50,000 or more, and this forms the nucleus of the helpmeet, after which the two individuals pursue their respective ways, co-operating with each other, but distinctly separate as to property. Reverses may overtake the one without affecting the security of the other. Yet both will be controlled by the one body of shareholders and directors, and will no doubt employ the one agency force.
